- ■TOSHIBA MACHINE PLC
- ■TOSHIBA PLC
- ■PANASONIC SERVO AMPLIFIER
- ■PANASONIC INDUSTRIAL DEVICES SUNX PLC

● SAFETY PRECAUTIONS ●

(Always read these precautions before using this equipment.)

Before using this product, please read this manual and the relevant manuals introduced in this manual carefully and pay full attention to safety to handle the product correctly.
The precautions given in this manual are concerned with this product.
In this manual, the safety precautions are ranked as "WARNING" and "CAUTION".

⚠ **WARNING**	Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.
⚠ **CAUTION**	Indicates that incorrect handling may cause hazardous conditions, resulting in medium or slight personal injury or physical damage.

Note that the ⚠caution level may lead to a serious accident according to the circumstances. Always follow the instructions of both levels because they are important to personal safety.

Please save this manual to make it accessible when required and always forward it to the end user.

[DESIGN PRECAUTIONS]

⚠WARNING

● Some failures of the GOT, communication unit or cable may keep the outputs on or off.
  Some failures of a touch panel may cause malfunction of the input objects such as a touch switch.
  An external monitoring circuit should be provided to check for output signals which may lead to a serious accident.Not doing so can cause an accident due to false output or malfunction.

● Do not use the GOT as the warning device that may cause a serious accident.
  An independent and redundant hardware or mechanical interlock is required to configure the device that displays and outputs serious warning.
  Failure to observe this instruction may result in an accident due to incorrect output or malfunction.

● When the GOT backlight has a failure, the GOT status will be as follows. Failure to observe this instruction may result in an accident due to incorrect output or malfunction.
  - GT27, GT25, GT23
    When the GOT backlight has a failure, the POWER LED blinks (orange/blue) and the display section dims. In such a case, the input by the touch switch(s) is disabled.
  - GT21
    When the GOT backlight has a failure, the display section dims. In such a case, the input by the touch switches is disabled.
  Even if the display section dims on the liquid crystal of the GOT, the input by the touch switch(s) may remain enabled. This may cause a malfunction of the touch switch.
  For example, if an operator assumes that the display section has dimmed because of the screen save function and touches the display section to cancel the screen save, a touch switch may be activated.
  The GOT backlight failure can be checked with a system signal of the GOT.

[DESIGN PRECAUTIONS]

⚠ **WARNING**

● The display section of the GOT is an analog-resistive type touch panel.
When multiple points of the display section are touched simultaneously, an accident may occur due to incorrect output or malfunction.
   • GT27
    Do not touch three points or more simultaneously on the display section. Doing so may cause an accident due to an incorrect output or malfunction.
   • GT25, GT23, GT21
    Do not touch two points or more simultaneously on the display section. Doing so may operate the switch located around the center of the touched point, or may cause an accident due to an incorrect output or malfunction.
● When programs or parameters of the controller (such as a PLC) that is monitored by the GOT are changed, be sure to reset the GOT, or turn on the unit again after shutting off the power as soon as possible.
Not doing so can cause an accident due to false output or malfunction.
● If a communication fault (including cable disconnection) occurs during monitoring on the GOT, communication between the GOT and PLC CPU is suspended and the GOT becomes inoperative.
For bus connection (GT27, GT25 Only) : The CPU becomes faulty and the GOT becomes inoperative.
For other than bus connection   : The GOT becomes inoperative.
A system where the GOT is used should be configured to perform any significant operation to the system by using the switches of a device other than the GOT on the assumption that a GOT communication fault will occur.
Not doing so can cause an accident due to false output or malfunction.

[DESIGN PRECAUTIONS]

⚠CAUTION

- Do not bundle the control and communication cables with main-circuit, power or other wiring.
  Run the above cables separately from such wiring and keep them a minimum of 100mm apart.
  Not doing so noise can cause a malfunction.
- Do not press the GOT display section with a pointed material as a pen or driver.
  Doing so can result in a damage or failure of the display section.
- When a GOT2000 series model and a GOT1000 series model are on an Ethernet network, do not
  set the IP address 192.168.0.18 for the GOTs and the controllers on this network.
  Doing so can cause IP address duplication at the GOT startup, adversely affecting the
  communication of the device with the IP address 192.168.0.18.
  The operation at the IP address duplication depends on the devices and the system.
- Turn on the controllers and the network devices to be ready for communication before they
  communicate with the GOT.
  Failure to do so can cause a communication error on the GOT.
- When the GOT is subject to shock or vibration, or some colors appear on the screen of the GOT, the
  screen of the GOT might flicker.

[MOUNTING PRECAUTIONS]

⚠WARNING

- Be sure to shut off all phases of the external power supply used by the system before mounting or
  removing the GOT main unit to/from the panel.
  Not doing so can cause the unit to fail or malfunction.
- Be sure to shut off all phases of the external power supply used by the system before mounting or
  removing the option unit onto/from the GOT. (GT27, GT25 Only)

[MOUNTING PRECAUTIONS]

⚠CAUTION

● Use the GOT in the environment that satisfies the general specifications described in this manual.
Not doing so can cause an electric shock, fire, malfunction or product damage or deterioration.

● When mounting the GOT to the control panel, tighten the mounting screws in the specified torque range with a Phillips-head screwdriver No.2.
- GT27, GT25, GT23
Specified torque range (0.36 N•m to 0.48 N•m)
- GT21
Specified torque range (0.20 N•m to 0.25 N•m)
Undertightening can cause the GOT to drop, short circuit or malfunction.
Overtightening can cause a drop, short circuit or malfunction due to the damage of the screws or the GOT.

● When mounting a unit on the GOT, tighten the mounting screws in the following specified torque range.
- GT27, GT25
When loading the communication unit or option unit other than wireless LAN unit to the GOT, fit it to the connection interface of the GOT and tighten the mounting screws in the specified torque range (0.36 N•m to 0.48 N•m) with a Phillips-head screwdriver No.2.
When loading the wireless LAN unit to the GOT, fit it to the side interface of GOT and tighten the mounting screws in the specified torque range (0.10 N•m to 0.14 N•m) with a Phillips-head screwdriver No.1.
When the GOT is installed vertically, its side interface is positioned on the bottom.
To prevent the falling of the wireless LAN communication unit from the side interface, install or remove the unit while holding it with hands.
- GT21
When mounting the SD card unit on the GOT, fit it to the side of the GOT and tighten the tapping screws in the specified torque range (0.3 N•m to 0.6 N•m) with a Phillips-head screwdriver No.2.
Under tightening can cause the GOT to drop, short circuit or malfunction.
Overtightening can cause a drop, failure or malfunction due to the damage of the screws or unit.

● When closing the USB environmental protection cover, fix the cover to the GOT by pushing the [PUSH] mark on the latch firmly to comply with the protective structure.(GT27, GT25 Only)

● Remove the protective film of the GOT.
When the user continues using the GOT with the protective film, the film may not be removed.
In addition, for the models equipped with the human sensor function, using the GOT with the protective film may cause the human sensor not to function properly

● Operate and store the GOT in environments without direct sunlight, high temperature, dust, humidity, and vibrations.

● When using the GOT in the environment of oil or chemicals, use the protective cover for oil.
Failure to do so may cause failure or malfunction due to the oil or chemical entering into the GOT.

[WIRING PRECAUTIONS]

⚠WARNING

● Be sure to shut off all phases of the external power supply used by the system before wiring.
Failure to do so may result in an electric shock, product damage or malfunctions.

[WIRING PRECAUTIONS]

⚠CAUTION

- Make sure to ground the FG terminal and LG terminal of the GOT power supply section to the protective ground conductors dedicated to the GOT with a ground resistance of 100 Ω or less. (GT21 does not have the LG terminal.)

- When tightening the terminal screws, use a Phillips-head screwdriver No.2.

- Tighten the terminal screws of the GOT power supply section in the following specified torque range.
    - GT27, GT25, GT23
      Specified torque range (0.5 N•m to 0.8 N•m)

- For a terminal processing of a wire to the GOT power supply section, use the following terminal.
    - GT27, GT25, GT23
      Use applicable solderless terminals for terminal processing of a wire and tighten them with the specified torque.
      Not doing so can cause a fire, failure or malfunction.
    - GT21
      Connect a stranded wire or a single wire directly, or use a rod terminal with an insulation sleeve.

- Correctly wire the GOT power supply section after confirming the rated voltage and terminal arrangement of the product.
  Not doing so can cause a fire or failure.

- Tighten the terminal screws of the GOT power supply section in the following specified torque range.
    - GT27, GT25, GT23
      Specified torque range (0.5 N•m to 0.8 N•m)
    - GT21
      Specified torque range (0.22 N•m to 0.25 N•m)

- Exercise care to avoid foreign matter such as chips and wire offcuts entering the GOT.
  Not doing so can cause a fire, failure or malfunction.

- The module has an ingress prevention label on its top to prevent foreign matter, such as wire offcuts, from entering the module during wiring.
  Do not peel this label during wiring.Before starting system operation, be sure to peel this label because of heat dissipation. (GT27, GT25 Only)

- Plug the communication cable into the GOT interface or the connector of the connected unit, and tighten the mounting screws and the terminal screws in the specified torque range.
  Undertightening can cause a short circuit or malfunction.
  Overtightening can cause a short circuit or malfunction due to the damage of the screws or unit.

- Plug the QnA/ACPU/Motion controller (A series) bus connection cable by inserting it into the connector of the connected unit until it "clicks".
  After plugging, check that it has been inserted snugly.
  Not doing so can cause a malfunction due to a contact fault. (GT27, GT25 Only)

[TEST OPERATION PRECAUTIONS]

⚠ WARNING
● Before performing the test operations of the user creation monitor screen (such as turning ON or OFF bit device, changing the word device current value, changing the settings or current values of the timer or counter, and changing the buffer memory current value), read through the manual carefully and make yourself familiar with the operation method. During test operation, never change the data of the devices which are used to perform significant operation for the system. False output or malfunction can cause an accident.

[STARTUP/MAINTENANCE PRECAUTIONS]

⚠ WARNING
● When power is on, do not touch the terminals. Doing so can cause an electric shock or malfunction. ● Correctly connect the battery connector. Do not charge, disassemble, heat, short-circuit, solder, or throw the battery into the fire. Doing so will cause the battery to produce heat, explode, or ignite, resulting in injury and fire. ● Before starting cleaning or terminal screw retightening, always switch off the power externally in all phases. Not switching the power off in all phases can cause a unit failure or malfunction. Undertightening can cause a short circuit or malfunction. Overtightening can cause a short circuit or malfunction due to the damage of the screws or unit.

[STARTUP/MAINTENANCE PRECAUTIONS]

⚠CAUTION
● Do not disassemble or modify the unit. Doing so can cause a failure, malfunction, injury or fire. ● Do not touch the conductive and electronic parts of the unit directly. Doing so can cause a unit malfunction or failure. ● The cables connected to the unit must be run in ducts or clamped. Not doing so can cause the unit or cable to be damaged due to the dangling, motion or accidental pulling of the cables or can cause a malfunction due to a cable connection fault. ● When unplugging the cable connected to the unit, do not hold and pull from the cable portion. Doing so can cause the unit or cable to be damaged or can cause a malfunction due to a cable connection fault. ● Do not drop the module or subject it to strong shock. A module damage may result. ● Do not drop or give an impact to the battery mounted to the unit. Doing so may damage the battery, causing the battery fluid to leak inside the battery. If the battery is dropped or given an impact, dispose of it without using. ● Before touching the unit, always touch grounded metals, etc. to discharge static electricity from human body, etc. Not doing so can cause the unit to fail or malfunction. ● Use the battery manufactured by Mitsubishi Electric Corporation. Use of other batteries may cause a risk of fire or explosion. ● Dispose of used battery promptly. Keep away from children.Do not disassemble and do not dispose of in fire. ● Be sure to shut off all phases of the external power supply before replacing the battery or using the dip switch of the terminating resistor. Not doing so can cause the unit to fail or malfunction by static electricity.

[TOUCH PANEL PRECAUTIONS]

⚠CAUTION
● For the analog-resistive film type touch panels, normally the adjustment is not required. However, the difference between a touched position and the object position may occur as the period of use elapses. When any difference between a touched position and the object position occurs, execute the touch panel calibration. ● When any difference between a touched position and the object position occurs, other object may be activated. This may cause an unexpected operation due to incorrect output or malfunction.

[PRECAUTIONS WHEN THE DATA STORAGE IS IN USE]

⚠WARNING

- If the SD card is removed from drive A of the GOT while being accessed by the GOT, the GOT may stop processing data for about 20 seconds.
  The GOT cannot be operated during this period.
  The functions that run in the background including a screen updating, alarm, logging, scripts, and others are also interrupted.
  Remove the SD card after checking the following items.
  - GT27, GT25, GT23
    After checking the light off of SD card access LED, remove the SD card.
  - GT21
    After disabling SD card access on the utility screen of the GOT and checking that the SD card access LED is off, remove the SD card.

⚠CAUTION

- If the data storage is removed from the GOT while being accessed by the GOT, the data storage and files may be damaged.
  Before removing the data storage from the GOT, check the SD card access LED, system signal, or others to make sure that the data storage is not accessed.
- Turning off the GOT while it accesses the SD card results in damage to the SD card and files.
- When using the GOT with an SD card inserted, check the following items.
  - GT27, GT25, GT23
    When inserting a SD card into the GOT, make sure to close the SD card cover.
    Failure to do so causes the data not to be read or written.
  - GT21
    When using an SD card connected to the SD card unit or the GOT, enable the SD card access in the GOT utility in advance.
    Failure to do so causes the data not to be read or written.
- When removing the SD card from the GOT, make sure to support the SD card by hand as it may pop out.
  Failure to do so may cause the SD card to drop from the GOT, resulting in a failure or break.
- When inserting a USB device into a USB interface of the GOT, make sure to insert the device into the interface firmly.
  Failure to do so may cause the USB device to drop from the GOT, resulting in a failure or break.
- Before removing the USB device from the GOT, follow the procedure for removal on the utility screen of the GOT.
  After the successful completion dialog is displayed, remove the USB device by hand carefully.
  Failure to do so may cause the USB device to drop from the GOT, resulting in a failure or break.

[PRECAUTIONS FOR REMOTE CONTROL]

⚠WARNING

● Remote control is available through a network by using GOT functions, including theSoftGOT-GOT link function, the remote personal computer operation function, the VNC server function, and the GOT Mobile function.
If these functions are used to perform remote control of control equipment, the field operator may not notice the remote control, possibly leading to an accident.
In addition, a communication delay or interruption may occur depending on the network environment, and remote control of control equipment cannot be performed normally in some cases.
Before using the above functions to perform remote control, fully grasp the circumstances of the field site and ensure safety.

[DISPOSAL PRECAUTIONS]

⚠CAUTION

● When disposing of this product, treat it as industrial waste.
When disposing of batteries, separate them from other wastes according to the local regulations.
(Refer to the GOT2000 Series User's Manual (Hardware) for details of the battery directive in the EU member states.)

[TRANSPORTATION PRECAUTIONS]

⚠CAUTION

● When transporting lithium batteries, make sure to treat them based on the transport regulations.
(Refer to the GOT2000 Series User's Manual (Hardware) for details of the regulated models.)
● Make sure to transport the GOT main unit and/or relevant unit(s) in the manner they will not be exposed to the impact exceeding the impact resistance described in the general specifications of this manual, as they are precision devices.
Failure to do so may cause the unit to fail.
Check if the unit operates correctly after transportation.
● When fumigants that contain halogen materials such as fluorine, chlorine, bromine, and iodine are used for disinfecting and protecting wooden packaging from insects, they cause malfunction when entering our products.
Please take necessary precautions to ensure that remaining materials from fumigant do not enter our products, or treat packaging with methods other than fumigation (heat method).
Additionally, disinfect and protect wood from insects before packing products.

INTRODUCTION

Thank you for choosing Mitsubishi Graphic Operation Terminal (Mitsubishi GOT).
Read this manual and make sure you understand the functions and performance of the GOT thoroughly
in advance to ensure correct use.

List of Manuals for GT Works3

For the manuals related to this product, install the manuals with the drawing software.
If you need a printed manual, consult your local Mitsubishi representative or branch office.

■1. List of Manuals for GT Designer3(GOT2000)

(1) Screen drawing software manuals

Manual name	Manual number (Model code)	Format
GT Works3 Version1 Installation Procedure Manual	-	PDF
GT Designer3 (GOT2000) Screen Design Manual	SH-081220ENG (1D7ML9)	PDF, e-Manual
GT Converter2 Version3 Operating Manual for GT Works3	SH-080862ENG (1D7MB2)	PDF
GOT2000 Series MES Interface Function Manual for GT Works3 Version1	SH-081228ENG	PDF

(2) Connection manuals

Manual name	Manual number (Model code)	Format
GOT2000 Series Connection Manual (Mitsubishi Products) For GT Works3 Version1	SH-081197ENG (1D7MJ8)	PDF
GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) For GT Works3 Version1	SH-081198ENG	PDF
GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) For GT Works3 Version1	SH-081199ENG	PDF
GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1	SH-081200ENG	PDF

(3) GT SoftGOT2000 manuals

Manual name	Manual number (Model code)	Format
GT SoftGOT2000 Version1 Operating Manual	SH-081201ENG	PDF

(4) GOT2000 manuals

Manual name	Manual number (Model code)	Format
GOT2000 Series User's Manual (Hardware)	SH-081194ENG (1D7MJ5)	PDF, e-Manual
GOT2000 Series User's Manual (Utility)	SH-081195ENG (1D7MJ6)	PDF
GOT2000 Series User's Manual (Monitor)	SH-081196ENG (1D7MJ7)	PDF

POINT

e-Manual

e-Manual refers to the Mitsubishi FA electronic book manuals that can be browsed using a dedicated tool.
e-Manual has the following features:
- Required information can be cross-searched in multiple manuals.
- Other manuals can be accessed from the links in the manual.
- Hardware specifications of each part can be found from the product figures.
- Pages that users often browse can be bookmarked.

Abbreviations, Generic Terms, the meaning of the icon

The following shows the abbreviations and generic terms used in Help.

■1. GOT

Abbreviations and generic terms			Description	Meaning of icon	
				Support	Not support
GOT2000 Series	GT27	GT27-X	GT2715-X	GT2715-XTBA, GT2715-XTBD	GT 27	-

■2. Communication unit

Abbreviations and generic terms	Description
Bus connection unit	GT15-QBUS, GT15-QBUS2, GT15-ABUS, GT15-ABUS2, GT15-75QBUSL, GT15-75QBUS2L, GT15-75ABUSL, GT15-75ABUS2L
Serial communication unit	GT15-RS2-9P, GT15-RS4-9S, GT15-RS4-TE
MELSECNET/H communication unit	GT15-J71LP23-25, GT15-J71BR13
CC-Link IE Controller Network communication unit	GT15-J71GP23-SX
CC-Link IE Field Network communication unit	GT15-J71GF13-T2
CC-Link communication unit	GT15-J61BT13
Wireless LAN communication unit	GT25-WLAN
Serial multi-drop connection unit	GT01-RS4-M
Connection conversion adapter	GT10-9PT5S
Field network adapter unit	GT25-FNADP

■3. Option unit

Abbreviations and generic terms		Description
Printer unit		GT15-PRN
Video/RGB unit	Video input unit	GT27-V4-Z (A set of GT16M-V4-Z and GT27-IF1000)
	RGB input unit	GT27-R2, GT27-R2-Z (A set of GT16M-R2-Z and GT27-IF1000)
	Video/RGB input unit	GT27-V4R1-Z (A set of GT16M-V4R1-Z and GT27-IF1000)
	RGB output unit	GT27-ROUT, GT27-ROUT-Z (A set of GT16M-ROUT-Z and GT27-IF1000)
Multimedia unit		GT27-MMR-Z (A set of GT16M-MMR-Z and GT27-IF1000)
Video signal conversion unit		GT27-IF1000
External I/O unit		GT15-DIO, GT15-DIOR
Sound output unit		GT15-SOUT

■4. Option

Abbreviations and generic terms	Description
SD card	NZ1MEM-2GBSD, NZ1MEM-4GBSD, NZ1MEM-8GBSD, NZ1MEM-16GBSD, L1MEM-2GBSD, L1MEM-4GBSD
Battery	GT11-50BAT
Protective sheet	GT27-15PSGC, GT25-12PSGC, GT25-10PSGC, GT25-08PSGC, GT25-05PSGC, GT21-05PSGC, GT21-04RPSGC-UC, GT21-03PSGC-UC, GT21-04PSGC-UC, GT27-15PSCC, GT25-12PSCC, GT25-10PSCC, GT25-08PSCC, GT25-12PSCC-UC, GT25-10PSCC-UC, GT25-08PSCC-UC, GT25-05PSCC, GT21-05PSCC, GT21-04RPSCC-UC, GT21-04PSCC-UC, GT21-03PSCC-UC
Environmental protection sheet	GT25F-12ESGS, GT25F-10ESGS, GT25F-08ESGS
Protective cover for oil	GT20-15PCO, GT20-12PCO, GT20-10PCO, GT20-08PCO, GT25-05PCO, GT21-04RPCO, GT10-30PCO, GT10-20PCO, GT05-50PCO
USB environmental protection cover	GT25-UCOV, GT25-05UCOV
Stand	GT15-90STAND, GT15-80STAND, GT15-70STAND, GT15-60STAND
Attachment	GT15-70ATT-98, GT15-70ATT-87, GT15-60ATT-97, GT15-60ATT-96, GT15-60ATT-87, GT15-60ATT-77

■5. Software

(1) Software related to GOT

Abbreviations and generic terms	Description
GT Works3	SW1DND-GTWK3-J, SW1DND-GTWK3-E, SW1DND-GTWK3-C
GT Designer3 Version1	Screen drawing software GT Designer3 for GOT2000/GOT1000 series
GT Designer3	Screen drawing software for GOT2000 series included in GT Works3
GT Designer3 (GOT2000)	
GT Designer3 (GOT1000)	Screen drawing software for GOT1000 series included in GT Works3
GT Simulator3	Screen simulator GT Simulator3 for GOT2000/GOT1000/GOT900 series
GT SoftGOT2000	Monitoring software GT SoftGOT2000 series
GT Converter2	Data conversion software GT Converter2 for GOT1000/GOT900 series
GT Designer2 Classic	Screen drawing software GT Designer2 Classic for GOT900 series
GT Designer2	Screen drawing software GT Designer2 for GOT1000/GOT900 series
DU/WIN	Screen drawing software FX-PCS-DU/WIN for GOT-F900 series

(2) Software related to iQ Works

Abbreviations and generic terms	Description
iQ Works	Abbreviation of iQ Platform compatible engineering environment MELSOFT iQ Works
MELSOFT Navigator	Generic term for integrated development environment software included in the SW DNC-IQWK (iQ Platform compatible engineering environment MELSOFT iQ Works) (□ indicates a version.)
MELSOFT iQ AppPortal	SW□DND-IQAPL-M type integrated application management software (□ indicates a version.)

(3) Other software

Abbreviations and generic terms		Description
GX Works3		SW□DND-GXW3-E (-EA) type programmable controller engineering software (□ indicates a version.)
GX Works2		SW□DNC-GXW2-□ type programmable controller engineering software (□ indicates a version.)
Controller simulator	GX Simulator3	Simulation function of GX Works3
	GX Simulator2	Simulation function of GX Works2

PREPARATORY PROCEDURES FOR MONITORING

1. PREPARATORY PROCEDURES FOR MONITORING

The following shows the procedures to be taken before monitoring and corresponding reference sections.

Setting the communication interface
Determine the connection type and channel No. to be used, and perform the communication setting.

☞ 1.1   Setting the Communication Interface
☞ Each chapter GOT Side Settings

Writing the project data and OS
Write the standard monitor OS, communication driver, extended function OS, project data and communication settings onto the GOT.

☞ 1.2.1   Writing the project data and OS onto the GOT

Verifying the project data and OS
Verify the standard monitor OS, communication driver, extended function OS, project data and communication settings are properly written onto the GOT.

☞ 1.2.2   Checking the project data and OS writing on GOT

Attaching the communication unit and connecting the cable
Mount the optional equipment and prepare/connect the connection cable according to the connection type.

☞ 1.3   Option Devices for the Respective Connection
☞ 1.4   Connection Cables for the Respective Connection
☞ Each chapter System Configuration
☞ Each chapter Connection Diagram

Verifying GOT recognizes connected equipment
Verify the GOT recognizes controllers on [Communication Settings] of the Utility.

☞ 1.5   Verifying GOT Recognizes Connected Equipment

Verifying the GOT is monitoring normally
Verify the GOT is monitoring normally using Utility, Developer, etc.

☞ 1.6   Checking for Normal Monitoring

1.1 Setting the Communication Interface

Set the communication interface of GOT and the connected equipment.
When using the GOT at the first time, make sure to set the channel of communication interface and the communication driver before writing to GOT.
Set the communication interface of the GOT at [Controller Setting] and [I/F Communication Setting] in GT Designer3.
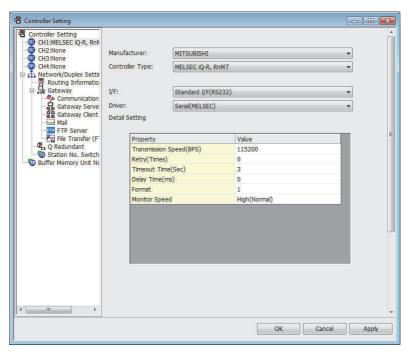

1.1.1 Setting connected equipment (Channel setting)

Set the channel of the equipment connected to the GOT.

■ Setting

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting dialog box appears. Select the channel No. to be used from the list menu.

3. Refer to the following explanations for the setting.
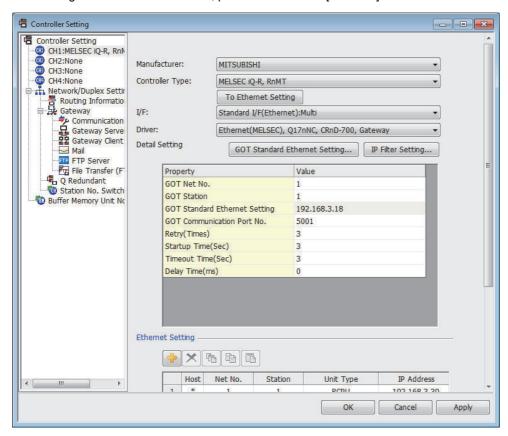

POINT

Channel No.2 to No.4

Use the channel No.2 to No.4 when using the Multi-channel function.
For details of the Multi-channel function, refer to the following.

☞ Mitsubishi Products 19. MULTI-CHANNEL FUNCTION

■ Setting item

This section describes the setting items of the Manufacturer, Controller Type, Driver and I/F.
When using the channel No.2 to No.4, put a check mark at [Use CH*].

Item	Description
Use CH*	Select this item when setting the channel No.2 to No.4.
Manufacturer	Select the manufacturer of the equipment to be connected to the GOT.
Type	Select the type of the equipment to be connected to the GOT. For the settings, refer to the following. ☞ (2)Setting [Controller Type]
I/F	Select the interface of the GOT to which the equipment is connected. For the settings, refer to the following. ☞ (3)Setting [I/F]
Driver	Select the communication driver to be written to the GOT. For the settings, refer to the following. ☞ (1)Setting [Driver]
Detail Setting	Make settings for the transmission speed and data length of the communication driver. ☞ Refer to each chapter of the equipment to be connected to the GOT.

(1) Setting [Driver]

The displayed items for a driver differ according to the settings [Manufacturer], [Controller Type] and [I/F].
When the driver to be set is not displayed, confirm if [Manufacturer], [Controller Type] and [I/F] are correct.
For the settings, refer to the following.

☞ [Setting the communication interface] section in each chapter

(2) Setting [Controller Type]
The types for the selection differs depending on the PLC to be used.
For the settings, refer to the following.

1. PREPARATORY PROCEDURES FOR MONITORING
1.1 Setting the Communication Interface

(3) Setting [I/F]
The interface differs depending on the GOT to be used.
Set the I/F according to the connection and the position of communication unit to be mounted onto the GOT.
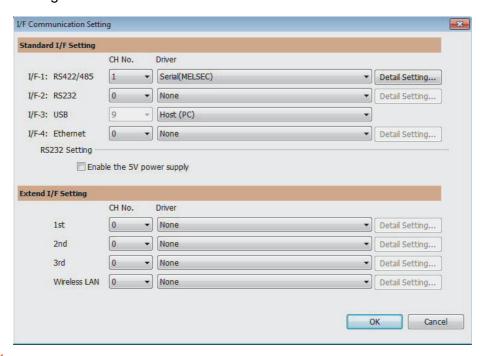

3rd stage

2nd stage

1st stage

Extension interface

Standard interface 4
(Ethernet interface built in the GOT)

Standard interface 1
(RS-232 interface built in the GOT)

Standard interface 3
(RS-422/485 interface built in the GOT)

(Example: In the case of the GT27)

Standard interface 2
(USB interface built in the GOT)

1.1.2 I/F communication setting

This function displays the list of the GOT communication interfaces.
Set the channel and the communication driver to the interface to be used.

■ Setting
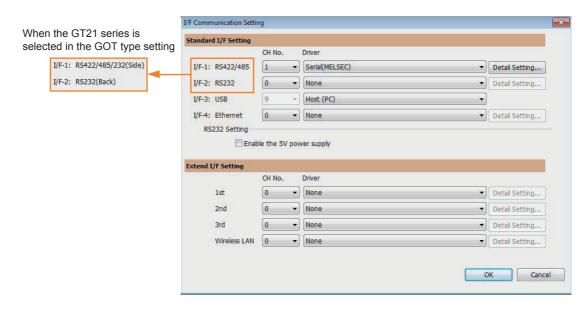

1. Select [Common] → [I/F Communication Setting] from the menu.

2. The I/F Communication Setting dialog box appears. Make the settings with reference to the following explanation.

1. PREPARATORY PROCEDURES FOR MONITORING
1.1 Setting the Communication Interface

■ Setting item

The following describes the setting items for the standard I/F setting and extension I/F setting.

When the GT21 series is
selected in the GOT type setting

I/F-1: RS422/485/232(Side)

I/F-2: RS232(Back)

Item		Description
Standard I/F setting		Set channel No. and drivers to the GOT standard interfaces.
	CH No.	Set the CH No. according to the intended purpose. 0: Not used 1 to 4: Used for connecting a controller of channel No. 1 to 4 set in Setting connected equipment (Channel setting) 5 to 8: Used for barcode function, RFID function, remote personal computer operation function (serial) 9: Used for connecting Host (PC), Ethernet download A: Used for the report function (with a serial printer), hard copy function (with a serial printer), remote personal computer operation function (Ethernet), VNC server function, gateway function, and MES interface function. Multi: Used for multi-channel Ethernet connection
	I/F	The communication type of the GOT standard interface is displayed.
	Driver	Set the driver for the device to be connected. • None • Host (Personal computer) • Each communication driver for connected devices
	Detail Setting	Make settings for the transmission speed and data length of the communication driver. ☞ Refer to each chapter of the equipment to be connected to the GOT.
	RS232 Setting	To validate the 5V power supply function in RS232, mark the [Enable the 5V power supply] checkbox. The RS232 setting is invalid when the CH No. of [I/F-1: RS232] is [9]. GT21 is not supported.
Extension I/F setting		Set the communication unit attached to the extension interface of the GOT. GT21 is not supported.
	CH No.	Set the CH No. according to the intended purpose. The number of channels differs depending on the GOT to be used. 0: Not used 1 to 4: Used for connecting a controller of channel No. 1 to 4 set in Setting connected equipment (Channel setting) 5 to 8: Used for barcode function, RFID function, remote personal computer operation (serial) A: Used for the video/RGB display function, multimedia function, external I/O function, operation panel function, RGB output function, report function, hard copy function (with a printer), sound output function, gateway function, MES interface function, and wireless LAN connection.

Channel No., drivers, [RS232 Setting]

(1) Channel No.2 to No.4
   Use the channel No.2 to No.4 when using the Multi-channel function.
   For details of the Multi-channel function, refer to the following.

   ☞ Mitsubishi Products 19. MULTI-CHANNEL FUNCTION

(2) Drivers
   The displayed items for a driver differ according to the settings [Manufacturer], [Controller Type] and [I/F].
   When the driver to be set is not displayed, confirm if [Manufacturer], [Controller Type] and [I/F] are correct.

   ☞ [Setting the communication interface] section in each chapter

1.1.3 Precautions

■ Precautions for changing model

(1) When devices that cannot be converted are included.
   When setting of [Manufacturer] or [Controller Type] is changed, GT Designer3 displays the device that cannot be converted (no corresponding device type, or excessive setting ranges) as [??]. In this case, set the device again.

(2) When the changed Manufacturer or Controller Type does not correspond to the network.
   The network will be set to the host station.

(3) When the Manufacturer or Controller Type is changed to [None]
   The GT Designer3 displays the device of the changed channel No. as [??]. In this case, set the device again.
   Since the channel No. is retained, the objects can be reused in other channel No. in a batch by using the [Device Bach Edit], [CH No. Batch Edit] or [Device List].
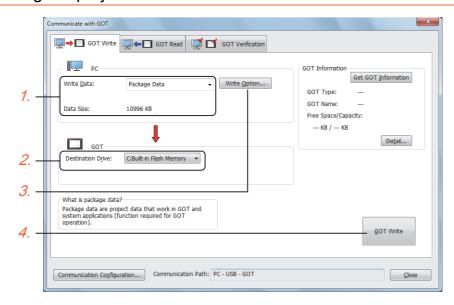

1.2 Writing the Project Data onto the GOT

Write the package data onto the GOT.
For details on writing to GOT, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

1.2.1 Writing the project data and OS onto the GOT
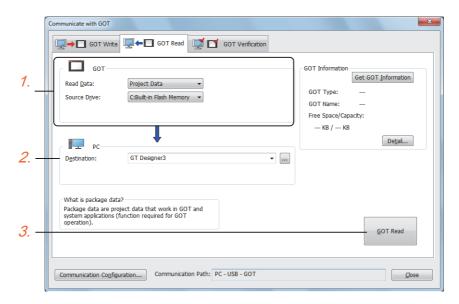

1. Select [Package Data] for [Write Data].
   The capacity of the transfer data is displayed in [Data Size]. Check that the destination drive has the sufficient available space.

2. Select [Destination Drive].

3. When the system application or the special data is required to be added to the package data or deleted, click the [Write Option] button and configure the setting in the [Write Option] dialog.

4. Click the [GOT Write] button.

5. The package data is written to the GOT.

1.2.2 Checking the project data and OS writing on GOT

Confirm if the package data is properly written onto the GOT by reading from GOT using GT Designer3.
For reading from the GOT, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

1. Set [GOT Side] as follows.
   • Select [Project Data] or [Package Data] for [Read Data].
   • Select the drive where the project data or the package data is stored for [Source Drive].

2. Set [PC Side].
   Set the reading destination of the project for [Destination].
   To read the project data to GT Designer3, select [GT Designer3].
   (When [Read Data] is [Package Data], the project data cannot be read to GT Designer3.)
   To read the project data as a file, click the [...] button to set the saving format and the saving destination of the file.

3. Click the [GOT Read] button.

4. The project is read.

5. Confirm that the project data is written correctly onto the GOT.

1.3 Option Devices for the Respective Connection

The following shows the option devices to connect in the respective connection type.
For the specifications, usage and connecting procedure on option devices, refer to the respective device manual.

1.3.1 Communication module

Product name	Model	Specifications
Bus connection unit	GT15-QBUS	For QCPU (Q mode), motion controller CPU (Q series) Bus connection (1ch) unit standard model
	GT15-QBUS2	For QCPU (Q mode), motion controller CPU (Q series) Bus connection (2ch) unit standard model
	GT15-ABUS	For A/QnACPU, motion controller CPU (A series) Bus connection (1ch) unit standard model
	GT15-ABUS2	For A/QnACPU, motion controller CPU (A series) Bus connection (2ch) unit standard model
	GT15-75QBUSL	For QCPU (Q mode), motion controller CPU (Q series) Bus connection (1ch) unit slim model
	GT15-75QBUS2L	For QCPU (Q mode), motion controller CPU (Q series) Bus connection (2ch) unit slim model
	GT15-75ABUSL	For A/QnACPU, motion controller CPU (A series) Bus connection (1ch) unit slim model
	GT15-75ABUS2L	For A/QnACPU, motion controller CPU (A series) Bus connection (1ch) unit slim model
Serial communication unit	GT15-RS2-9P	RS-232 serial communication unit (D-sub 9-pin (male))
	GT15-RS4-9S	RS-422/485 serial communication unit (D-sub 9-pin (female))
	GT15-RS4-TE	RS-422/485 serial communication unit (terminal block)
MELSECNET/H communication unit	GT15-J71LP23-25	Optical loop unit
	GT15-J71BR13	Coaxial bus unit
MELSECNET/10 communication unit	GT15-J71LP23-25	Optical loop unit (MELSECNET/H communication unit used in the MNET/10 mode)
	GT15-J71BR13	Coaxial bus unit (MELSECNET/H communication unit used in the MNET/10 mode)
CC-Link IE Controller Network communication unit	GT15-J71GP23-SX	Optical loop unit
CC-Link IE Field Network communication unit	GT15-J71GF13-T2	CC-Link IE Field Network (1000BASE-T) unit
CC-Link communication unit	GT15-J61BT13	Intelligent device station unit CC-LINK Ver. 2 compatible
Ethernet communication unit	Built into GOT	Ethernet (100Base-TX)
Wireless LAN communication unit[1]	GT25-WLAN	• Used for the connection to the IEEE802.11b/g/n compliant, built-in antenna, access point (master unit)[2], station (slave unit), personal computers, tablets, and smartphones. • Compliance with Japan Radio Law[3], FCC[4], R&TTE[4], SRRC[5], KC[5]

*1 Data transfer in wireless LAN communication may not be as stable as that in cable communication.
　 A packet loss may occur depending on the surrounding environment and the installation location.
　 Be sure to perform a confirmation of operation before using this product.
*2 When a wireless LAN configuration of GT Designer3 the [Operation Mode] is set to [access point], the maximum connection number is a five (recommended).
*3 The product with hardware version A or later (manufactured in December 2013) complies with the regulation.
　 The product with hardware version A can be used only in Japan.
*4 The product with hardware version B or later (manufactured from October 2014) complies with the regulation.
　 The product with hardware version B or later can be used in Japan, the United States, the EU member states, Switzerland, Norway, Iceland, and Liechtenstein.
*5 The product with hardware version D or later (manufactured from May 2016) complies with the regulation.
　 The product with hardware version D or later can be used in Japan, the United States, the EU member states, Switzerland, Norway, Iceland, Liechtenstein, China (excluding Hong Kong, Macao, and Taiwan), and South Korea.

1.3.2　Option unit

Product name	Model	Specifications
Multimedia unit	GT27-MMR-Z	For video input signal (NTSC/PAL) 1 ch, playing movie
Video input unit	GT27-V4-Z	For video input signal (NTSC/PAL) 4 ch
RGB input unit	GT27-R2 GT27-R2-Z	For analog RGB input signal 2 ch
Video/RGB input unit	GT27-V4R1-Z	For video input signal (NTSC/PAL) 4 ch, for analog RGB mixed input signal 1 ch
RGB output unit	GT27-ROUT GT27-ROUT-Z	For analog RGB output signal 1 ch
Sound output unit	GT15-SOUT	For sound output
External I/O unit	GT15-DIOR	For the connection to external I/O device or operation panel (Negative Common Input/Source Type Output)
	GT15-DIO	For the connection to external I/O device or operation panel (Positive Common Input/Sink Type Output)

1.3.3　Conversion cables

Product name	Model	Specifications
RS-485 terminal block conversion modules	FA-LTBGT2R4CBL05	RS-422/485 (Connector) ↔ RS-485 (Terminal block) Supplied connection cable dedicated for the conversion unit
	FA-LTBGT2R4CBL10	
	FA-LTBGT2R4CBL20	

1.3.4　Serial Multi-Drop Connection Unit

Product name	Model	Specifications
Serial multi-drop connection unit	GT01-RS4-M	GOT multi-drop connection module ☞ Mitsubishi Products 18. GOT MULTI-DROP CONNECTION

1.3.5　Field Network Adapter Unit

Product name	Model	Specifications
Field network adapter unit	GT25-FNADP	The field network adapter unit can be used with the following field networks by using the Anybus CompactCom M40 network communication module manufactured by HMS (hereinafter referred to as the communication module). Field networks: • PROFIBUS DP-V1 • DeviceNet How to incorporate the communication module to the field network adapter unit, and the details of the product name of the communication module, refer to the following manual. ☞ GOT2000 Series Field Network Adapter Unit User's Manual

1.3.6 Installing a unit on another unit (Checking the unit installation position)

This section describes the precautions for installing units on another unit.
For the installation method of each unit, refer to the User's Manual for the communication unit and option unit you are using.
For the method for installing a unit on another unit, refer to the following.

■ When using a bus connection unit
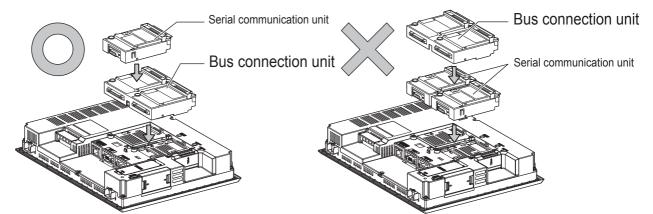

The installation position varies depending on the bus connection unit to be used.

(1) Wide bus units (GT15-75QBUS(2)L, GT15-75ABUS(2)L, GT15-QBUS2, GT15-ABUS2)

Install a bus connection unit in the 1st stage of the extension interface.
If a bus connection unit is installed in the 2nd stage or above, the unit cannot be used.
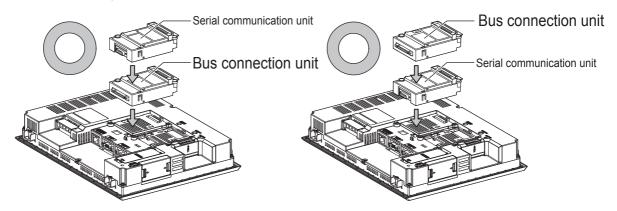

Example: Installing a bus connection unit and serial communication units

(2) Standard size bus connection unit (GT15-QBUS and GT15-ABUS)
A bus connection unit can be installed in any position (1st to 3rd stage) of the extension interface.

Example: Installing a bus connection unit and serial communication units

PREPARATORY PROCEDURES FOR MONITORING
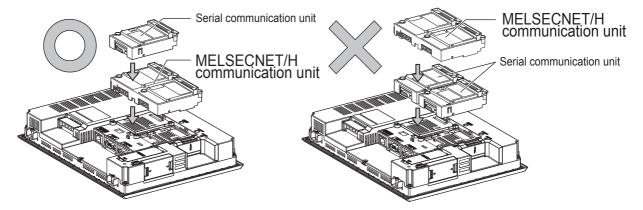

■ When using a MELSECNET/H communication unit, CC-Link IE Controller Network communication unit, or CC-Link communication unit (GT15-J61BT13)

Install a MELSECNET/H communication unit, CC-Link IE Controller Network communication unit, or CC-Link communication unit in the 1st stage of an extension interface.
If a bus connection unit is installed in the 2nd stage or above, the unit cannot be used.
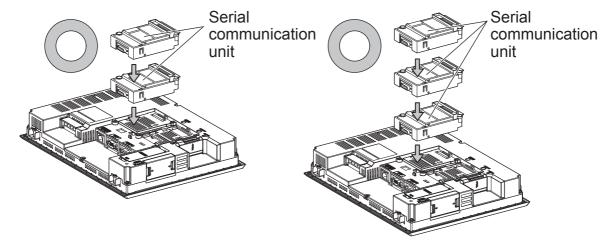

Example: When installing a MELSECNET/H communication unit and a serial communication unit

■ When using a serial communication unit
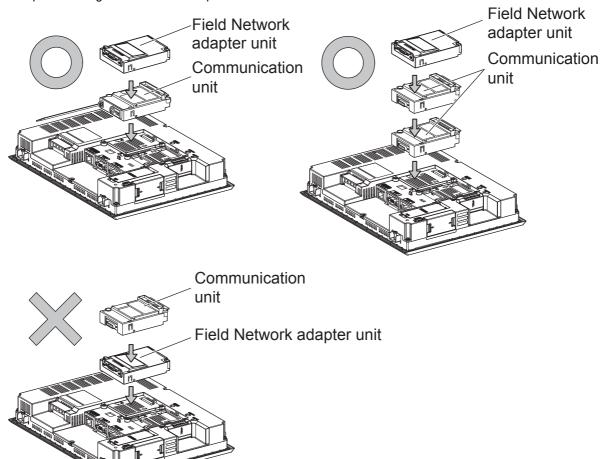

A serial communication unit can be installed in any position (1st to 3rd stage) of the extension interface.

■ When using a field network adapter unit

A field network adapter unit can be installed in any position (1st to 3rd stage) of the extension interface.
However, at the top of the field network adapter unit, you will not be able to mount the each communication unit.
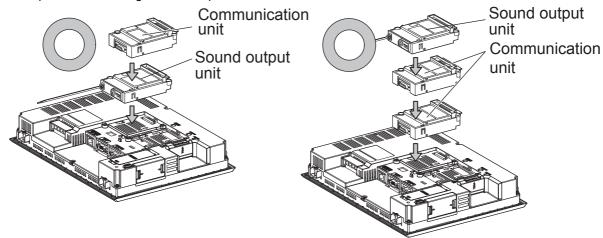

Example: Installing a field network adapter unit

■ When using the sound output unit or external I/O unit

The sound output unit or external I/O unit can be installed in any position (1st to 3rd stage) of the extension interface.

Example: When installing a sound output unit
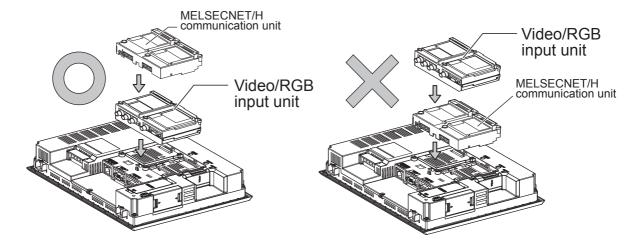

■ When using the video input unit, RGB input unit, video/RGB input unit, RGB output unit, or multimedia unit

Only either one of the video input unit, RGB input unit, video/RGB input unit, RGB output unit, or multimedia unit can be installed to the GOT.

Install the video input unit, RGB input unit, video/RGB input unit, RGB output unit, or multimedia unit at the 1st stage of the extension interface. These communication units cannot be used if installed in the 2nd or higher stage.

When any of these units is used, the communication units indicated below must be installed in the 2nd stage of the extension interface.

Communication unit	Model	
Bus connection unit	GT15-QBUS2,	GT15-ABUS2
MELSECNET/H communication unit	GT15-J71LP23-25,	GT15-J71BR13
CC-Link IE Controller Network connection	GT15-J71GP23-SX	
CC-Link communication unit	GT15-J61BT13	

Example: When installing a video input unit and a MELSECNET/H communication unit

1.4 Connection Cables for the Respective Connection

To connect the GOT to a device in the respective connection type, connection cables between the GOT and a device are necessary.
For cables needed for each connection, refer to each chapter for connection.

1.4.1 GOT connector specifications

The following shows the connector specifications on the GOT side.
Refer to the following table when preparing connection cables by the user.

■ RS-232 interface

Use the following as the RS-232 interface and the RS-232 communication unit connector on the GOT. For the GOT side of the connection cable, use a connector and connector cover applicable to the GOT connector.

(1) Connector specifications

GOT	Hardware Version	Connector type	Connector model	Manufacturer
GT27 GT25 GT23 GT2105-QTBDS GT2105-QMBDS	-	9-pin D-sub (male) inch screw fixed type	17LE-23090-27(D4C□)	DDK Ltd.
GT15-RS2-9P	-	9-pin D-sub (male) inch screw fixed type	17LE-23090-27(D3CC)	DDK Ltd.
GT01-RS4-M	-			
GT2104-RTBD GT2104-PMBDS2 GT2103-PMBDS2	-	9-pin terminal block[*1]	MC1.5/9-G-3.5BK	PHOENIX CONTACT Inc

*1 The terminal block (MC1.5/9-ST-3.5 or corresponding product) of the cable side is packed together with the GT2104-RTBD, GT2103-PMBDS2.

(2) Connector pin arrangement

GT27, GT25, GT23, GT15-RS2-9P, GT01-RS4-M	GT2104-RTBD, GT2103-PMBDS2
GOT main part connector see from the front 1 5 6 9 9-pin D-sub (male)	See from the back of a GOT main part NC NC SG CS RS DR ER RD SD 9-pin terminal block

■ RS-422/485 interface

Use the following as the RS-422/485 interface and the RS-422/485 communication unit connector on the GOT.
For the GOT side of the connection cable, use a connector and connector cover applicable to the GOT connector.

(1) Connector model

GOT	Connector type	Connector model	Manufacturer
GT27 GT25 GT23 GT2105-QTBDS GT2105-QMBDS	9-pin D-Sub (female) M2.6 millimeter screw fixed type	17LE-13090-27(D2AC)	DDK Ltd.
GT2104-PMBD GT2103-PMBD	5-pin terminal block[*1]	MC1.5/5-G-3.5BK	PHOENIX CONTACT Inc
GT2104-RTBD GT2104-PMBDS GT2104-PMBLS GT2103-PMBDS GT2103-PMBLS	9-pin terminal block[*2]	MC1.5/9-G-3.5BK	PHOENIX CONTACT Inc

1.4.2　Coaxial cableconnector connection method
The following describes the method for connecting the BNC connector (connector plug for coaxial cable) and the cable.
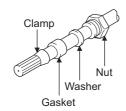

⚠CAUTION
● Solder the coaxial cable connectors properly. 　Insufficient soldering may result in malfunctions.

Components of the BNC connector

Nut　　Washer　　Gasket

Plug shell

Clamp　　Contact

Structure of the coaxial cable

External conductor
Outer sheath　　Insulating material

Internal conductor

A

Cut this portion of the outer sheath

1. Remove the external sheath of the coaxial cable with dimensions as shown below.
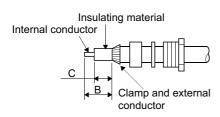

Cable in use	A
3C-2V	15 mm
5C-2V, 5C-2V-CCY	10 mm

Clamp

Nut
Washer
Gasket

2. Pass the nut, washer, gasket, and clamp through the coaxial cable as shown on the left and loosen the external conductor.

Insulating material
Internal conductor

C
B
Clamp and external conductor

3. Cut the external conductor, insulting material, and internal conductor with the dimensions as shown below.
Note that the external conductor should be cut to the same dimension as the tapered section of the clamp and smoothed down to the clamp.

Cable in use	B	C
3C-2V	6 mm	3 mm
5C-2V, 5C-2V-CCY	7 mm	5 mm

Solder here

4. Solder the contact to the internal conductor.

5. *4.*Insert the connector assembly shown in ### into the plug shell and screw the nut into the plug shell.

Precautions for soldering

Note the following precautions when soldering the internal conductor and contact.
- Make sure that the solder does not bead up at the soldered section.
- Make sure there are no gaps between the connector and cable insulator or they do not cut into each other.
- Perform soldering quickly so the insulation material does not become deformed.

1.4.3   Terminating resistors of GOT

The following shows the terminating resistor specifications on the GOT side.
When setting the terminating resistor in each connection type, refer to the following.

■ RS-422/485 communication unit
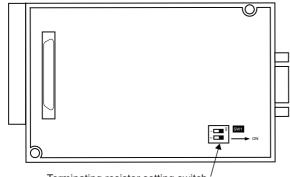

Set the terminating resistor using the terminating
resistor setting switch.

Terminating resistor[1]	Switch No.	
	1	2
100 OHM	ON	ON
Disable	OFF	OFF

[1]   The default setting is "Disable".

• For RS422/485 communication unit

Terminating resistor setting switch

Rear view of RS-422/485 communication unit.

■ GT27
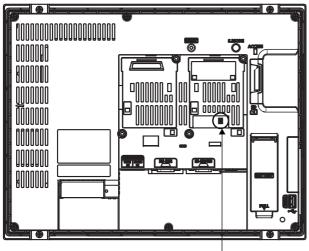

Set the terminating resistor using the terminating
resistor setting switch.

Terminating resistor[1]	Switch No.	
	1	2
100 OHM	ON	ON
Disable	OFF	OFF

[1]   The default setting is "Disable".

• For GT2710-V

Terminating resistor setting switch
(inside the cover)

■ GT25
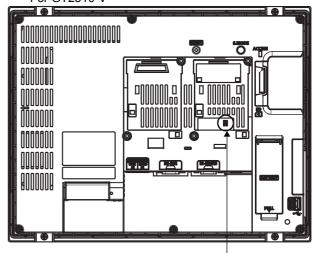

Set the terminating resistor using the terminating
resistor setting switch.

Terminating resistor[1]	Switch No.	
	1	2
100 OHM	ON	ON
Disable	OFF	OFF

[1]   The default setting is "Disable".

• For GT2510-V

Terminating resistor setting switch
(inside the cover)

■ GT23
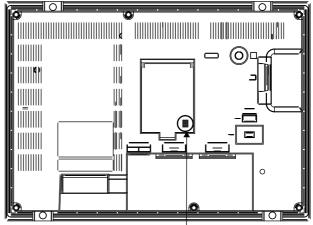

Set the terminating resistor using the terminating
resistor setting switch.

Terminating resistor[1]	Switch No.	
	1	2
100 OHM	ON	ON
Disable	OFF	OFF

[1]   The default setting is "Disable".

• For GT2310-V
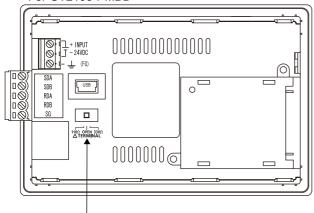

Terminating resistor setting switch
(inside the cover)

■ GT21

Set the terminating resistor using the terminating resistor setting switch.

• For GT2103-PMBD

Terminating resistor selector switch
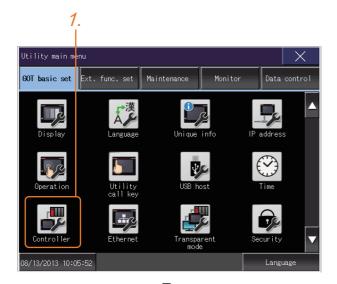

1.5 Verifying GOT Recognizes Connected Equipment
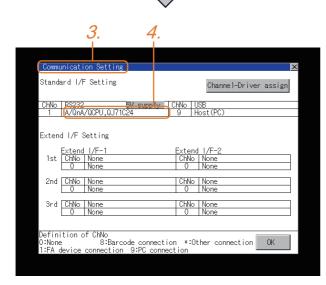

Verify the GOT recognizes controllers on [Communication Settings] of the Utility.
- Channel number of communication interface, communication drivers allocation status
- Communication unit installation status

For details on the Utility, refer to the following manual.

　　　　　　☞ GOT2000 Series User's Manual (Utility)

1.

1. After powering up the GOT, touch [GOT basic set] → [Controller] from the Utility.
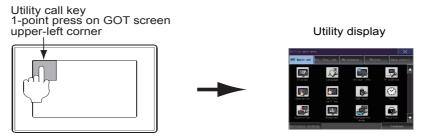

2. The [Communication Settings] appears.

3. Verify that the communication driver name to be used is displayed in the communication interface box to be used.

4. When the communication driver name is not displayed normally, carry out the following procedure again.
　　☞ 1.1Setting the Communication Interface

POINT

Utility

(1) How to display Utility (at default)

Utility call key
1-point press on GOT screen
upper-left corner

Utility display

(2) Utility call
When setting [Pressing time] to other than 0 second on the setting screen of the utility call key, press and hold the utility call key until the buzzer sounds. For the setting of the utility call key, refer to the following.

☞ GOT2000 Series User's Manual (Utility)

(3) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication setting] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(4) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

1.6 Checking for Normal Monitoring
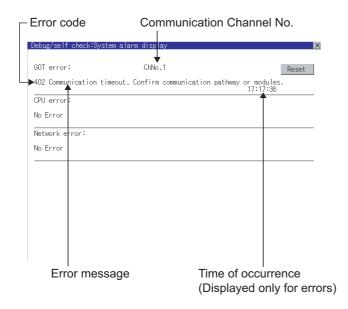

1.6.1 Check on the GOT

■ Check for errors occurring on the GOT

Presetting the system alarm to project data allows you to identify errors occurred on the GOT, PLC CPU, servo amplifier and communications.

For details on the operation method of the GOT Utility screen, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

Error code   Communication Channel No.

```
Debug/self check:System alarm display          ×

GOT error:              ChNo.1              [ Reset ]

402 Communication timeout. Confirm communication pathway or modules.
                                  17:17:36
CPU error:

No Error

Network error:

No Error

```

Error message   Time of occurrence
                           (Displayed only for errors)

HINT

Alarm popup display

With the alarm popup display function, alarms are displayed as a popup display regardless of whether an alarm display object is placed on the screen or not (regardless of the display screen).

Since comments can be flown from right to left, even a long comment can be displayed all.

For details of the alarm popup display, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual
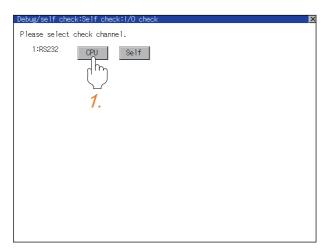

■ Perform an I/O check

Whether the PLC can communicate with the GOT or not can be checked by the I/O check function.
If this check ends successfully, it means correct communication interface settings and proper cable connection.
Display the I/O check screen by Main Menu.

　　　• Display the I/O check screen by [Main menu] → [Self check] → [I/O check].
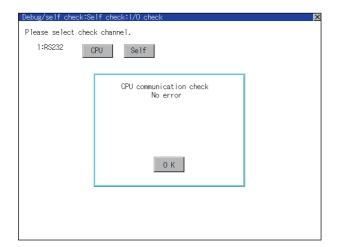

For details on the I/O check, refer to the following manual:

☞ GOT2000 Series User's Manual (Utility)

1. Touch [CPU] on the I/O check screen.
Touching [CPU] executes the communication check with the connected PLC.
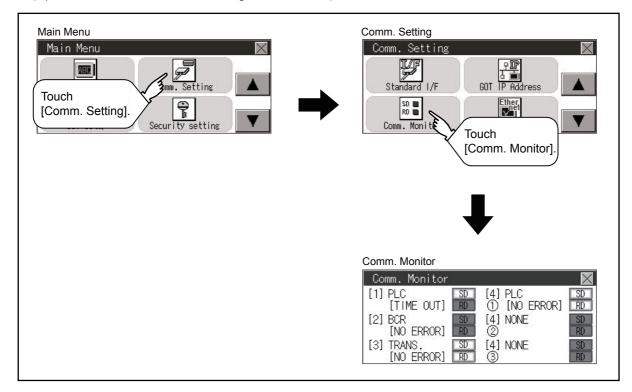

2. When the communication screen ends successfully, the screen on the left is displayed.

■ Communication monitoring function

The communication monitoring is a function that checks whether the PLC can communicate with the GOT.
If this check ends successfully, it means correct communication interface settings and proper cable connection.
Display the communication monitoring function screen by [Main Menu] → [Comm. Setting] → [Comm. Monitor].
For details on the communication monitoring function, refer to the following manual:

☞ GOT2000 Series User's Manual (Utility)

(Operation of communication monitoring function screen)
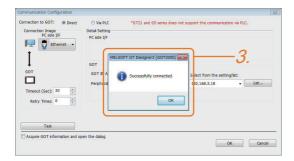

1.6.2 Confirming the communication state on the GOT side (For Ethernet connection)

■ Confirming the communication state on Windows®, GT Designer3

(1) When using the Command Prompt of Windows®
Execute a Ping command at the Command Prompt of Windows®.

(a) When normal communication
C:\>Ping 192.168.3.18
Reply from 192.168.3.18: bytes=32 time<1ms TTL=64

(b) When abnormal communication
C:\>Ping 192.168.3.18
Request timed out.

(2) When using the [Connection Test] of GT Designer3
Select [Communication] → [Communication settings] from the menu to display [TEST].

1. Set the [PC side I/F] to the [Ethernet].

2. Specify the [GOT IP Address] of the [Communication Configuration] and click the [Test] button.

3. Check if GT Designer3 has been connected to the GOT.

(4) When abnormal communication
At abnormal communication, check the followings and execute the Ping command or [Connection Test] again.
• Mounting condition of Ethernet communication unit
• Cable connecting condition
• Confirmation of [Communication Settings]
• IP address of GOT specified by Ping command
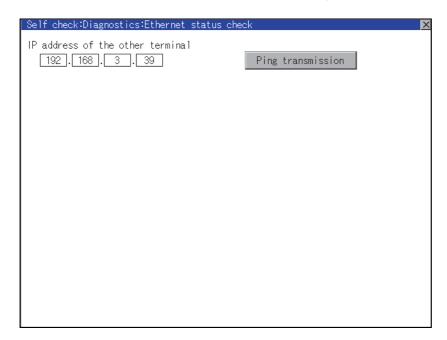

■ Confirming the communication state on the GOT

[PING Test] can be confirmed by the Utility screen of the GOT.

For details on the operation method of the GOT Utility screen, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

```
┌──────────────────────────────────────────────────────────┬───┐

1. PREPARATORY PROCEDURES FOR MONITORING
1.6 Checking for Normal Monitoring

1.6.3　Confirming the communication state to each station (Station monitoring function)

The station monitoring function detects the faults (communication timeout) of the stations monitored by the GOT. When detecting the abnormal state, it allocates the data for the faulty station to the GOT special register (GS).

(1)　No. of faulty stations

    (a)　Ethernet connection (Except for Ethernet multiple connection)
        Total No. of the faulty CPU is stored.

Device	b15 to b8	b7 to b0
GS230	(00H fixed)	No. of faulty stations

    (b)　Ethernet multiple connection
        Total No. of the faulty connected equipment is stored.

Channel	Device	b15 to b8	b7 to b0
Ch1	GS280	(00H fixed)	No. of faulty stations
Ch2	GS300	(00H fixed)	No. of faulty stations
Ch3	GS320	(00H fixed)	No. of faulty stations
Ch4	GS340	(00H fixed)	No. of faulty stations

POINT
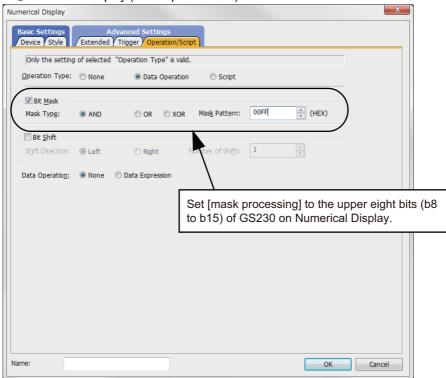

When monitoring GS230 on Numerical Display

When monitoring GS230 on Numerical Display, check [mask processing] with data operation tab as the following. For the data operation, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual
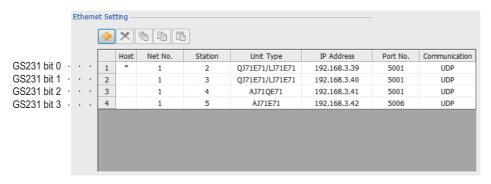

● Numerical Display (Data Operation tab)

Set [mask processing] to the upper eight bits (b8 to b15) of GS230 on Numerical Display.

(2) Faulty station information

The bit corresponding to the faulty station is set. (0: Normal, 1: Abnormal)

The bit is reset after the fault is recovered.

(a) Ethernet connection (Except for Ethernet multiple connection)

Ethernet Setting								
		Host	Net No.	Station	Unit Type	IP Address	Port No.	Communication
GS231 bit 0 · · ·	1	*	1	2	QJ71E71/LJ71E71	192.168.3.39	5001	UDP
GS231 bit 1 · · ·	2		1	3	QJ71E71/LJ71E71	192.168.3.40	5001	UDP
GS231 bit 2 · · ·	3		1	4	AJ71QE71	192.168.3.41	5001	UDP
GS231 bit 3 · · ·	4		1	5	AJ71E71	192.168.3.42	5006	UDP

Device	Ethernet setting No.															
	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
GS231	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
GS232	32	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17
GS233	48	47	46	45	44	43	42	41	40	39	38	37	36	35	34	33
GS234	64	63	62	61	60	59	58	57	56	55	54	53	52	51	50	49
GS235	80	79	78	77	76	75	74	73	72	71	70	69	68	67	66	65
GS236	96	95	94	93	92	91	90	89	88	87	86	85	84	83	82	81
GS237	112	111	110	109	108	107	106	105	104	103	102	101	100	99	98	97
GS238	128	127	126	125	124	123	122	121	120	119	118	117	116	115	114	113

(b) Ethernet connection, CC-Link IE Controller Network connection, CC-Link IE Field Network connection, Temperature controller connection, Inverter connection, Servo amplifier connection.

The station number to which each device corresponds changes according to the connection/non connection with Ethernet.

With Ethernet connection: 1 to 128

With other than Ethernet connection: 0 to 127

Example) With Ethernet connection, when PC No. 100 CPU connecting to Ch3 is faulty, GS327.b3 is set.

• With Ethernet connection: 1 to 128

Device				Station number

*1   Product manufactured by IAI Corporation. For details of the product, contact IAI Corporation.
*2   Connect it to the RS-232 interface (built into GOT). It cannot be mounted on GT1655 and GT155□.
*3   Use the following models.
      ERC2-□-□-□-□-□-NP-□-□, ERC2-□-□-□-□-□-PN-□-□
*4   When a GT10-C02H-6PT9P unit of the sub version A or B is used, do not ground the case of the D-sub (9-pin) connector.

2.3   Connection Diagram

The following diagram shows the connection between the GOT and the PLC.

2.3.1   RS-232 cable

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-232 cable must be 10cm or less.

(2) GOT side connector
For the GOT side connector, refer to the following.
☞ 1.4.1 GOT connector specifications

(3) IAI Robot Controller side connector
Use the connector compatible with the IAI Robot Controller.
For details, refer to the IAI Robot Controller user's manual.
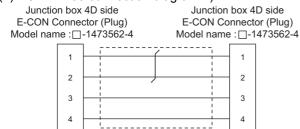

2.3.2 RS-422/485 cable

■ Precautions when preparing a cable

(1) Cable length
The maximum length of the RS-422/485 cable must be 100m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(3) E-CON connector (plug) (Type name: □-1473562-4)
Product manufactured by Tyco Electronics. For details of the product, contact Tyco Electronics.

■ Connecting terminating resistors

(1) GOT side
When connecting a PLC to the GOT, a terminating resistor must be connected to the GOT.

(a) For GT27, GT25, GT23
Set the terminating resistor setting switch of the GOT main unit to "Disable".
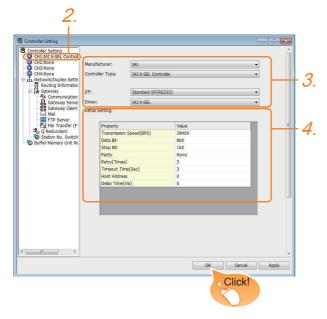

(b) For GT21
Set the terminating resistor selector to "OPEN ".
For the procedure to set the terminating resistor, refer to the following.

☞ 1.4.3 Terminating resistors of GOT

2.4 GOT Side Settings

2.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: IAI
   • Controller Type: Set either of followings.
     <Connecting to X-SEL, SSEL, ASEL, PSEL>
     IAI X-SEL Controller
     <Connecting to PCON, ACON, SCON, ERC2>
     IAI ROBO CYLINDER
   • I/F: Interface to be used
   • Driver: Set either of followings.
     <Connecting to X-SEL, SSEL, ASEL, PSEL>
     IAI X-SEL
     <Connecting to PCON, ACON, SCON, ERC2>
     IAI ROBO CYLINDER

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.
   ☞ 2.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.
☞ 1.1.2 I/F communication setting

2.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	38400
Data Bit	8 bit
Stop Bit	1 bit
Parity	None
Retry(Times)	3
Timeout Time(Sec)	3
Host Address	0
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 38400bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bit, 8bit
Stop Bit	Specify the stop bit length for communications. (Default: 1bits)	1bit, 2bit
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: None)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 3timse)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address	Make the settings according to the station number (station code) of the controller to be monitored. (Default: 0)	<Connecting to X-SEL, SSEL> 0 to 255 <Connecting to PCON, ACON, SCON> 0 to 15
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300 (ms)

---

2. CONNECTION TO IAI ROBOT CONTROLLER
2.4 GOT Side Settings

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

2.5 Robot Controller Side Setting

IAI Robot Controller

For details of IAI Robot Controller, refer to the following manuals.

☞ IAI Robot Controller user's Manual

2.5.1 Connecting to X-SEL

■ Parameter setting

Enter the following parameters using peripheral software. When setting parameters, set the mode switch of the controller to "MANU".

Parameter	Parameter Name	Set Value[4]
I/O parameter 90	Usage of SIO channel 1[1] opened to user	• When used in "MANU" Set either of the following. 0: SEL opened program 2: IAI protocol B • When used in "AUTO" 2: IAI protocol B
I/O parameter 91	Station code of SIO channel 1[1] opened to user	0 to 255 153*
I/O parameter 92 [2]	Baud rate type of SIO channel 1[1] opened to user	0: 9600bps* 1: 19200bps 2: 38400bps 3: 57600bps 5: 115200bps
I/O parameter 93	Data length of SIO channel 1[1] opened to user	7bit, 8bit*
I/O parameter 94	Stop bit length of SIO channel 1[1] opened to user	1bit*, 2bit
I/O parameter 95	Parity type of SIO channel 1 [1] opened to user	0: None* 1: Odd 2: Even
I/O parameter 97 [3]	IAI-protocol minimum response delay for SIO channel 1[1] opened to user	0 to 999(ms)
Other parameter 46	Other setting bit pattern 1	bit0 to 3 = 1 (fixed)
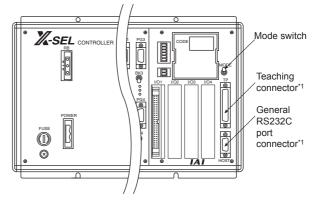

*1 For X-SEL(P/Q/PX/QX), the parameter becomes the SIO channel 0 opened to user.
*2 Indicates only the transmission that can be specified on the GOT side.
Specify the transmission speed to match the baud rate of the GOT.
*3 Set it only when a wait time is required before the response and transmission to the GOT request. Normally, the communication is available using default values.
*4 When using the "MANU" mode, the set value is fixed to the value with *. Adjust the settings of the GOT side to the * settings.
However, the communication setting of the PC software becomes the setting of X-SEL after the PC software for X-SEL is connected. In this case, adjust the communication setting of the GOT to the setting of the PC software.

■ Mode switch

(1) X-SEL K type
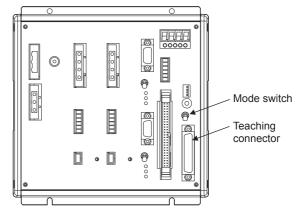

(a) When setting the mode switch to "MANU" Connect the GOT to the following teaching connector.

(b) When setting the mode switch to "AUTO" Connect the GOT to the following general RS232C port connector.

*1 The teaching connector and general RS232C port connector cannot be used at the same time.

(2) Other than X-SEL K type

Set the mode switch to "MANU" or "AUTO" and connect the GOT to the following teaching connector.

2.5.2 Connecting to SSEL, ASEL, PSEL

■ Parameter setting

Enter the following parameters using peripheral software. When setting parameters, set the mode switch of the controller to "MANU".
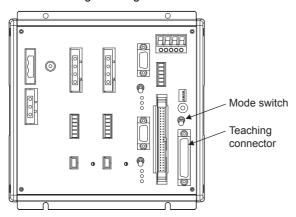

Parameter	Parameter Name	Set Value
I/O parameter 90	Usage of SIO channel 0 opened to user	2: IAI protocol B (fixed)
I/O parameter 91	Station code of SIO channel 0 opened to user	0 to 255
I/O parameter 92 *1	Baud rate type of SIO channel 0 opened to user	0: 9600bps 1: 19200bps 2: 38400bps 3: 57600bps 5: 115200bps
I/O parameter 93	Data length of SIO channel 0 opened to user	7bit, 8bit
I/O parameter 94	Stop bit length of SIO channel 0 opened to user	1bit, 2bit
I/O parameter 95	Parity type of SIO channel 0 opened to user	0: None 1: Odd 2: Even
I/O parameter 97 *2	IAI-protocol minimum response delay for SIO channel 0 opened to user	0 to 999(ms)
Other parameter 46	Other setting bit pattern 1	bit0 to 3 = 1 (fixed)

*1 Indicates only the transmission that can be specified on the GOT side.
Specify the transmission speed to match the baud rate of the GOT.

*2 Set it only when a wait time is required before the response and transmission to the GOT request. Normally, the communication is available using default values.

■ Mode switch
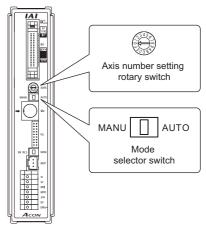

Set the mode switch to "AUTO" and connect the GOT to the following teaching connector.

Mode switch

Teaching connector

2.5.3 Connecting to PCON, ACON, SCON

■ Axis number setting, Mode select

For controllers without the following switches, set from the setting tool (PC software).

Axis number setting rotary switch

MANU [ ] AUTO
Mode selector switch

Switch	Setting details
Axis number setting rotary switch	0 to 15
Mode selector switch	<Only the monitor> AUTO <monitor, data change> MANU

■ Transmission speed setting

Set the transmission speed from the setting tool (PC software).

Item	Range
SIO transmission speed*1	9600/19200/38400/57600/115200bps Default: 38400bps

*1 Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.

2.5.4　Connecting to ERC2

■ Axis number setting, Mode select

Set from the setting tool (PC software).

■ Transmission speed setting

Set the transmission speed from the setting tool (PC software).

Item	Range
SIO transmission speed[*1]	9600/19200/38400/57600/115200bps Default: 38400bps
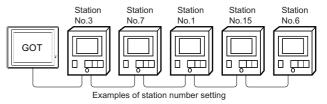

*1　Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.

2.5.5　Station No.settings

Set each station number so that no station number overlaps.

The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

Examples of station number setting

(1) Direct specification

When setting the device, specify the station number of the controller of which data is to be changed.

Model name	Specification range	Refer to
PCON, ACON, SCON	0 to 15	2.5.3
ERC2	0 to 15	2.5.4

(2) Indirect specification

When setting the device, indirectly specify the station number of the controller of which data is to be changed using the 16-bit GOT internal data register (GD10 to GD25).
When specifying the station No. from 100 to 115 on GT Designer3, the value of GD10 to GD25 compatible to the station No. specification will be the station No. of the controller.

Specification station No.	Compatible device	Setting range
100	GD10	
101	GD11	
102	GD12	
103	GD13	
104	GD14	
105	GD15	
106	GD16	
107	GD17	0 to 15
108	GD18	(If setting a value out of the range
109	GD19	above, a timeout error occurs.)
110	GD20	
111	GD21	
112	GD22	
113	GD23	
114	GD24	
115	GD25	

2.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.
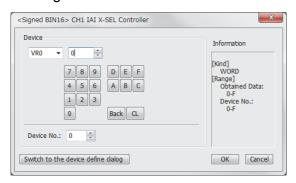

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

2.6.1 IAI robot controller (IAI X-SELController)

■ Setting item

Item		Description
Device		Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
	Device No.	Set the number of the program for which the device is used.
	Information	Displays the device type and setting range which are selected in [Device].
Switch to the device dfine dialog		Device definition can be checked.

POINT

Memory area for writing position data

Position data can be written to RAM or E^2PROM of the controller.

(1) When written to RAM
Remember that written position data are cleared when power supply to the controller is turned off.

(2) When written to E^2PROM
Written position data are not cleared even when power supply to the controller is turned off. However, there are limits in the number of writing to E^2PROM. If the data is frequently updated (more than once in an hour), write the parameters to the RAM. For details, refer to the manual of the controller used.

■ Device

	Device name	Setting Range	Device No. representation
Bit device	Input Port (IP)[1]	IP000 to IP299	Decimal
	Output Port (OP)	OP300 to OP599

*1   Write disabled
*2   Read disabled
*3   The following restrictions are applied depending on the
        program number.
        • When the program number is 000, the variable number
          can be only even numbers.
        • When the program number is 001 to 128, the variable
          number can be only odd numbers.
*4   For the program control device, the command to be sent
        differs depending on the write data. Write data other than the
        followings are processed as an internal error of GOT.
        • Write data 0: Program Exit Command(0x254)
        • Write data 1: Program Execution Command(0x253)
        • Write data 2: Program Pause Command(0x255)
        • Write data 3: Program 1 Step Execution Command(0x256)
        • Write data 4: Program Restart Command(0x257)
*5   When performing software reset, a no response error is
        displayed after a non-communicating period of ten and
        several seconds, and then the communication is resumed.
*6   For the word address, the value is specified only when the
        last digit is 1.
*7   For the device whose obtained data No.0 is a command
        trigger, a request is sent to the controller when the Write or
        Read is input to the command trigger. It is not sent when the
        Clear is input.

POINT

Device representation

(1) Flag device

        FG000 : 600

2.6.2 IAI robot controller (IAI PCON, ACON, SCON, ERC2 controller)

■ Setting item

Item	Description	
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.	
Infomation	Displays the device type and setting range which are selected in [Device].	
Network	Station No.	Monitors the robo cylinder of the specified station No. 0 to 15: To monitor the robo cylinder of the specified station No. 100 to 115: To set the station No. of the robo cylinder to be monitored by the value of GOT data register (GD).[1]
Swich to the device define dialog	Device definition can be checked.	

*1 The following shows the relation between station numbers of the robo cylinder and the GOT data register.

Station No.	GOT data register (GD)	Setting range
100	GD10	
101	GD11	0 to 15 (If setting a value out of the range above, a timeout error occurs.)
:	:	
114	GD24	
115	GD25	

■ Device

(1) Device name

Device name		Setting Range	Device No. representation
Bit device	Status (S)	S0000 to SFFFF	Hexadecimal
	The bit specification of the word device	Setting range of each word device	
Word / Double word device	Register (R)	R0000 to RFFFF	Hexadecimal

(2) Status (S) (Bit device)
The following shows device numbers which can be set for the status and the corresponding device contents.

Status	Area name	Description	Abbreviation
0000 to 00FF	- (Reserved for system)		
0100	Device status register 1 (DSS1)	EMG status	EMGS
0101		Safety speed enabled status	SFTY
0102		Controller ready status	PWR
0103		Servo ON status	SV
0104		Missed work in push-motion operation	PSFL
0105		Major failure status	ALMH
0106		Minor failure status	ALML
0107		Absolute error status	ABER
0108		Brake forced-release status	BKRL
0109		Cannot be used	
010A		Pause status	STP
010B		HomingHome return status	HEND
010C		Positioning completion Position complete status	PEND
010D to 010F		Cannot be used	
0110	Device status register 2 (DSS2)	Cannot be used	
0111		Cannot be used	
0112		Load output judgment status	LOAD
0113		Torque level status	TRQS
0114		Teaching mode status	MODS
0115		Position-data load command status	TEAC
0116		Jog+ status	JOG+
0117		Jog- status	JOG-
0118		Completed positionPosition complete 7	PE7
0119		Completed positionPosition complete 6	PE6
011A		Completed positionPosition complete 5	PE5
011B		Completed positionPosition complete 4	PE4
011C		Completed positionPosition complete 3	PE3

0129		Cannot be used	
012A		Moving signal	MOVE

(Continued to next page)

Status	Area name	Description	Abbreviation
012B to 012F	Expansion device status register (DSSE)	Cannot be used	
0130 to 0136	Position number status register (POSS)	Cannot be used	
0137		Completed position numberPosition complete number status bit 256	PM256
0138		Completed position numberPosition complete number status bit 128	PM128
0139		Completed position numberPosition complete number status bit 64	PM64
013A		Completed position numberPosition complete number status bit 32	PM32
013B		Completed position numberPosition complete number status bit 16	PM16
013C		Completed position numberPosition complete number status bit 8	PM8
013D		Completed position numberPosition complete number status bit 4	PM4
013E		Completed position numberPosition complete number status bit 2	PM2
013F		Completed position numberPosition complete number status bit 1	PM1
0140	Zone status register (ZONS)	Cannot be used	
0141		Limit sensor output monitor 2	LS2
0142		Limit sensor output monitor 1	LS1
0143		Limit sensor output monitor 0	LS0
0144 to 0146		Cannot be used	
0147		Position zone output monitor	ZP
0148 to 014D		Cannot be used	
014E		Zone output monitor 2	Z2
014F		Zone output monitor 1	Z1
0150 to 015F	Input port monitor register (DIPM)	PIO connector pin numbers 20A (IN15) to 5A (IN0)	
0160 to 016F	Output port monitor register (DOPM)	PIO connector pin numbers 16B (OUT15) to 1B (OUT0)	
0170	Special input port monitor register (SIPM)	Cannot be used	
0171		Command pulse NP signal status	NP
0172		Cannot be used	
0173		Command pulse PP signal status	PP
0174 to 0175		Cannot be used	
0176		Cannot be used	
0177		Mode switch status	MDSW
0178		Cannot be used	
0179 to 017B		Cannot be used	
017C		Home-check sensor monitor	HMCK
017D		Overtravel sensor	OT
017E		Creep sensor	CREP
017F		Limit sensor	LS
0180 to 03FF	- (Reserved for system)		

Status	Area name	Description	Abbreviation
0400	Device control register 1 (DRG1)	EMG operation specification	EMG
0401		Safety speed command	SFTY
0402		Cannot be used	
0403		Servo ON command	SON
0404 to 0406		Cannot be used	
0407		Alarm reset command	ALRS
0408		Brake forced-release command	BKRL
0409		Cannot be used	
040A		Pause command	STP
040B		HomingHome return command	HOME
040C		Positioning start command	CSTR
040D to 040F		Cannot be used	
0410	Device control register 2 (DRG2)	Cannot be used	
0411		Jog/inch switching	JISL
0412 to 0413		Cannot be used	
0414		Teaching mode command	MOD
0415		Position data load command	TEAC
0416		Jog+ command	JOG+
0417		Jog- command	JOG-
0418		Start position 7	ST7
0419		Start position 6	ST6
041A		Start position 5	ST5
041B		Start position 4	ST4
041C		Start position 3	ST3
041D		Start position 2	ST2
041E		Start position 1	ST1
041F		Start position 0	ST0
0420 to 0426	Expansion device control register (DRGE)	Cannot be used	
0427		PIO/Modbus switching specification	PMSL
0428 to 042B		Cannot be used	
042C		Deceleration stop	STOP
042D to 042F		Cannot be used	
0430 to 0436	Position number specification register (POSR)	Cannot be used	
0437		Position command bit 256	PC256
0438		Position command bit 128	PC128
0439		Position command bit 64	PC64
043A		Position command bit 32	PC32
043B		Position command bit 16	PC16
043C		Position command bit 8	PC8
043D		Position command bit 4	PC4
043E		Position command bit 2	PC2
043F		Position command bit 1	PC1
0440 to FFFF	- (Reserved for system)		

■ Register (R) (Word device/Double word device)

The following shows device numbers which can be set for the register and the corresponding device contents.

Register	Data length	Area name	Description		Abbreviation
0000 to 0CFF	- (Reserved for system)				
0D00	Word		Device control register 1		DRG1
0D01	Word	I/O control information category	Device control register 2		DRG2
0D03	Word		Position number specification register		POSR
0D04 to 0FFF	- (Reserved for system)				
1000 to 3FFF			Offset (Hex.)		
	Double word		+0000H	Target position	PCMD
	Double word		+0002H	In-position bandPositioning band	INP
	Double word		+0004H	Speed command	VCMD
	Double word	Position table information (low-speed memory area)	+0006H	Individual zone boundary +	ZNMP
	Double word		+0008H	Individual zone boundary -	ZNLP
	Word		+000AH	Acceleration command	ACMD
	Word		+000BH	Deceleration command	DCMD
	Word		+000CH	Push-current limiting value	PPOW
	Word		+000DH	Load current threshold	LPOW
	Word		+000EH	Control flag specification	CTLF

(Calculation of detailed device number)

Device number (Hex) = 1000H + (16 × Position number (0 to 767))[1] + (Offset value corresponding to the device content) H

Example)
Position number: 5
Device content: Speed command (Offset value = 0004H)

Device number (Hex) = 1000H + (16 × 5 = 80)[1][2] + 0004H = 1000H + 50H[2] + 0004H = 1054H

[1] Calculated in decimal.
[2] Converting 16 × 5 = 80 to hexadecimal results 50H.

Register	Data length	Area name	Description	Abbreviation
4000 to 8FFF	- (Reserved for system)			
9000	Double word		Current position monitor	PNOW
9002	Word		Present alarm code query	ALMC
9003	Word		Input port query	DIPM
9004	Word		Output port monitor query	DOPM
9005	Word		Device status 1 query	DSS1
9006	Word		Device status 2 query	DSS2
9007	Word		Expansionded device status query	DSSE
9008	Double word	Controller monitor information category	System status query	STAT
900A	Double word		Current speed monitor	VNOW
900C	Double word		Current ampere monitor	CNOW
900E	Double word		Deviation monitor	DEVI
9010	Double word		System timer query	STIM
9012	Word		Special input port query	SIPM
9013	Word		Zone status query	ZONS
9014	Word		Completed position numberPosition complete number status query	POSS
9015 to 97FF	- (Reserved for system)			
9800	Word	Position command category	Position movement command register	POSR
9801 to 98FF	- (Reserved for system)			

(Continued to next page)

Register	Data length	Area name	Description	Abbreviation
9900	Double word	Numerical value command category	Target position coordinate specification register	PCMD
9902	Double word		In-position bandPositioning band specification register	INP
9904	Double word		Speed specification register	VCMD
9906	Word		Acceleration/deceleration speed specification register	ACMD
9907	Word		Push-current limiting value	PPOW
9908	Word		Control flag specification register	CTLF
9909 to FFFF			- (Reserved for system)	

2. CONNECTION TO IAI ROBOT CONTROLLER
2.6 Device Range that Can Be Set

2.7 Precautions

■ Program control device
- When Program Execution Command (0), Program Exit Command (2), or Program Restart Command (4) is written to the program control device (PRG 0), it will be a request for all programs running in the controllers.
- When unsupported write data is input to the program control device, the following error is displayed in the system alarm.
  315: Device writing error.
  　Correct device.

■ Variable devices

The variable number 99 of Integer device and variable number 199 of Real device are special devices used for operations by the X-SEL controller system. Do not use these variables for general purpose.

■ Command trigger compatible device
- For the device whose obtained data No.0 is a command trigger, communication with the controller is performed when the Write(1)/Read(2) is set to the command trigger. When the command trigger and setting value are written in a batch, the communication is performed based on the value set with batch write.
- When Clear(4) is set to the command trigger, the communication with the controller is not performed and the set value is initialized.
- When an unsupported set value is input to the command trigger, the following error is displayed in the system alarm.
  315: Device writing error.
  　Correct device.

■ Device reserved for system use

Devices of "Reserved for system use" are devices with indefinite values. Do not write to these devices.

■ Write to the flash ROM
- The point data can be written to the flash ROM of the X-SEL controller. When the point data is written to the flash ROM, it is not cleared even when power supply to the controller is turned off. However, there are limits in the number of writing. For details, refer to the user's manual of X-SEL controller used.
- Never turn off the main power supply during the flash ROM write. Doing so may cause the loss of data and malfunction of controllers. For details, refer to the user's manual of X-SEL controller used.

■ Communication disconnection
- Writing to the flash ROM disconnects the communication with controllers until the writing is completed.
- Resetting software restarts the controllers. During this time, the communication with controllers is disconnected.

■ Station number setting of the IAI robot controller system

The robot controller with the station number set with the host address must be included.

☞ 2.4.2 Communication detail settings

■ Connection of the IAI X-SEL K type

Note the following precaution when using the controller with the mode switch set to MANU.
- After powering up the X-SEL, connecting the GOT before the PC software causes the program startup disabled (A1D alarm) on the X-SEL side.

3.2.14   Connecting to NX series

Communication driver

MODBUS/RTU
MODBUS/TCP

Use a MODBUS(R)/RTU or MODBUS(R)/TCP communication driver to connect the GOT to NX series.
For the MODBUS(R)/RTU or MODBUS(R)/TCP connection, refer to the following manual.

☞ GOT2000 Series Connection Manual (Microcomputer/MODBUS/Peripheral Connection)

4. MODBUS(R)/RTU CONNECTION
5. MODBUS(R)/TCP CONNECTION

For the valid devices, refer to the following Technical News.

☞ List of Valid Devices Applicable for GOT2000 Series with MODBUS Connection (GOT-A-0070)

3.3 Connection Diagram
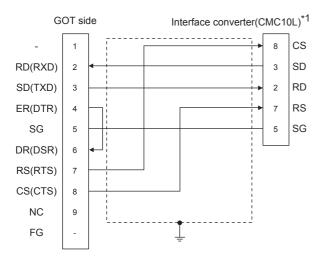

The following diagram shows the connection between the GOT and the control equipment.

3.3.1 RS-232 cable

■ Connection diagram

(1) RS232 connection diagram 1)

GOT side		Interface converter(CMC10L)[1]
-	1	8 CS
RD(RXD)	2	3 SD
SD(TXD)	3	2 RD
ER(DTR)	4	7 RS
SG	5	5 SG
DR(DSR)	6	
RS(RTS)	7	
CS(CTS)	8	
NC	9	
FG	-	
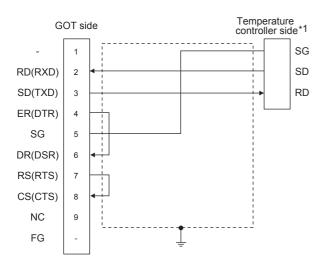

[1] For details on the setting method of the TERMINAL mode, refer to the following.

☞ 3.5.5 Connecting to CMC10L

(2) RS232 connection diagram 2)

GOT side		Temperature controller side[1]
-	1	SG
RD(RXD)	2	SD
SD(TXD)	3	RD
ER(DTR)	4	
SG	5	
DR(DSR)	6	
RS(RTS)	7	
CS(CTS)	8	
NC	9	
FG	-	

[1] Pin No. of temperature controller differs depending on model and optional function model.
Refer to the following table. The numbers in ( ) of the following table correspond to optional function models.

Signal name	Model of temperature controller					
	SDC20		SDC21	SDC40A, SDC40B, SDC40G	AHC2001	
	(03, 05)	(10)	(04, 07, 09)		CPU	SCU
	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.
SG	5	18	29	61	5	5
SD	17	16	27	60	3	3
RD	18	17	28	59	2	2

■ Precautions when preparing a cable

(3) Cable length
The length of the RS-232 cable must be 15m or less.

(4) GOT side connector
For the GOT side connector, refer to the following.
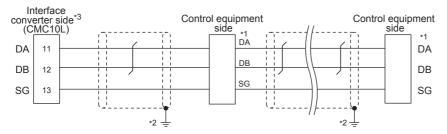

☞ 1.4.1 GOT connector specifications

(5) AZBIL control equipment side connector
Use the connector compatible with the AZBIL control
equipment side module.

For details, refer to the user's manual of the AZBIL control
equipment

3.3.2 RS-485 cable

■ Connection diagram

(1) RS485 connection diagram 1)

*1 Pin No. of control equipment differs depending on the model.Refer to the following table.
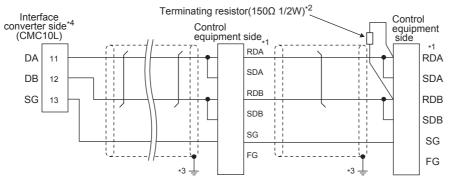

Signal name	Model of control equipment			
	DMC10	SDC15	SDC25/26 SDC35/36	AUR350C AUR450C
	Pin No.	Pin No.	Pin No.	Pin No.
DA	4	16	22	DA
DB	5	17	23	DB
SG	6	18	24	SG

*2 Connect FG grounding to the single-sided end of a cable shield line.
*3 Set the terminal resistor to "Disable".
For details of terminating resistor settings, refer to the following.
☞ 3.5.5 Connecting to CMC10L

(2) RS485 connection diagram 2)
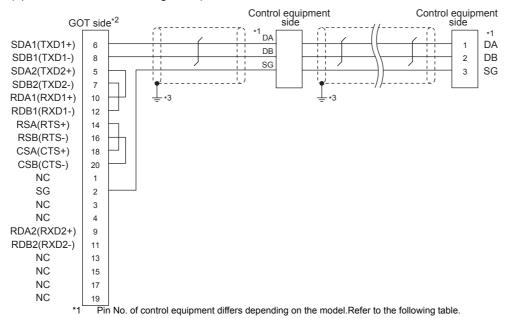

*1 Pin No. of control equipment differs depending on model and optional function model. Refer to the following table.The numbers in ( ) of the following table correspond to optional function models.

Signal name	Model of control equipment									
	SDC20		SDC21	SDC30	SDC31		SDC40A/ 40B/40G	CMF050 CML	PBC201- VN2	CMC10B
	(02, 04)	(09)	(03, 06, 08)	(040, 041)	(045)	(446, 546)				
	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.	Pin No.
RDA	17	18	27	18	18	27	59	9	12	11

*3 Connect FG grounding to the single-sided end of a cable shield line.
*4 Set the terminating resistor of GOT as follows.
   Set the terminating resistor setting switch of the GOT main unit to "Disable".

☞ ■ Connecting terminating resistors

■ Precautions when preparing a cable

(1) Cable length
　　The length of the RS-485 cable must be 500m or less.

(2) GOT side connector
　　For the GOT side connector, refer to the following.
　　☞ 1.4.1 GOT connector specifications

(3) AZBIL control equipment side connector
　　Use the connector compatible with the AZBIL control equipment side module.
　　For details, refer to the user's manual of the AZBIL control equipment.

■ Connecting terminating resistors

(1) GOT side
　　Set the terminating resistor by operating the terminating resistor setting switch.

　　For the procedure to set the terminating resistor, refer to the following.
　　☞ 1.4.3 Terminating resistors of GOT

(2) AZBIL control equipment side
　　When connecting a AZBIL control equipment to the GOT, a terminating resistor must be connected.
　　☞ 3.5 Control Equipment Side Setting
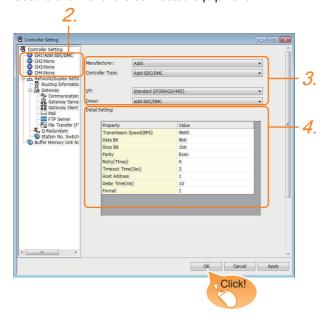

3.4 GOT Side Settings

3.4.1 Setting communication interface (Communication settings)

Set the channel of the connected equipment.

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: Azbil
   • Controller Type: Set either of the followings.
     <Connecting to DMC50 and AHC2001>
     Azbil DMC50
     <Connecting to a module other than above>
     Azbil SDC/DMC
   • I/F: Interface to be used
   • Driver: Azbil SDC/DMC

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 3.4.2 Communication detail settings

   Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

3.4.2　Communication detail settings

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	1 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Host Address	1
Delay Time(ms)	10
Format	1

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address[3][4]	Specify the host address (station No. of the GOT to which the temperature controller is connected) in the connected network. (Default: 1)	1 to 15
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT.[1] (Default: 1ms)	0 to 300ms
Format[2]	Select the communication format. (Default: 1) format 1: only continuous access format 2: continuous and random access	1/2

[1]　Do not specify "0".
[2]　Format is ignored when connecting to DMC50.
[3]　Host Address is ignored when connecting to DMC10 or SDC.
[4]　Host Address is valid when connecting to DMC50.
　　　Devices to be the target of Host Address setting differ depending on the system configuration.
　　　<When connecting to the temperature controller via COM module>
　　　Specify the station No. of the COM module.
　　　<When connecting to the temperature controller directly>
　　　Specify the station No. of the temperature controller.

POINT
Format setting
The compatible format of control equipment differs depending on model.

Model name	Compatible format
SDC20/21, SDC30/31, SDC40A/40B/40G, CMS, CMF, CML, MQV, MPC, MVF, PBC201-VN2, RX	Format 1 only
DMC10, SDC15, SDC25/26, SDC35/36, SDC45/46, AUR350C, AUR450C, CMC10B	Format 1 or Format 2
DMC50, AHC2001	The format setting is invalid.

For the continuous access and random access of the control equipment, refer to the following manual.

☞　User's Manual of the AZBIL control equipment

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication setting] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.
☞　GOT2000 Series User's Manual (Utility)
(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

3. CONNECTION TO AZBIL CONTROL EQUIPMENT
3.4 GOT Side Settings

3.5 Control Equipment Side Setting

AZBIL control equipment

For details of AZBIL control equipment, refer to the following manual.

☞ User's Manual of the AZBIL control equipment

	Model name	Refer to
Control equipment	DMC10	3.5.1

Interface converter	CMC10L	3.5.5

3.5.1 Connecting to DMC10

■ Communication settings
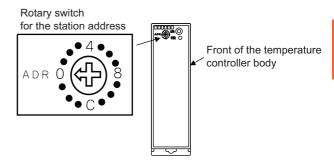

Make the communication settings by operating the Smart Loader Package (SLP-D10) of the temperature controller.

Item	Set value
Transmission speed[1]	9600bps, 19200bps
Communication mode[2]	CPL
Data bit	8bits
Parity bit[1]	Even, none
Stop bit	2bits
Communication minimum response time	1ms, 10ms, 100ms, 200ms
Station address[3][4]	0 to F

[1] Adjust the settings with GOT settings.
[2] Set to CPL.
[3] Do not set to "0".
[4] Select the station address without overlapping with that of other units.

■ Station address setting

Set the station address using the rotary switch for the station address.

Rotary switch for the station address

Front of the temperature controller body

3.5.2 Connecting to SDC40A/40B/40G

■ Communication settings

Make the communication settings by operating the key of the temperature controller.

Item	Set value
Transmission speed[1]	9600bps
Data Bit	8bits
Parity bit[1]	Even, none
Stop bit	1bit, 2bits
Station address[2][3]	0 to 127

[1] The transmission speed setting must be consistent with that of the GOT side.
[2] Do not set to "0".
[3] Select the station address without overlapping with that of other units.

3.5.3 Connecting to SDC15, SDC25/26 or SDC35/36

■ Communication settings

Make the communication settings by operating the key or Smart Loader Package (SLP-C35) of the temperature controller.

Item	Set value
Transmission speed[1]	9600bps, 19200bps
Communication mode[2]	CPL
Data bit[1]	7bits, 8bits
Parity bit[1]	Odd, even, none
Stop bit[1]	1bit, 2bits
Communication minimum response time	1 to 250ms
Station address[3][4]	0 to 127

[1] The transmission speed setting must be consistent with that of the GOT side.
[2] Set to CPL.
[3] Do not set to "0".
[4] Select the station address without overlapping with that of other units.

3.5.4 Connecting to SDC20/21, SDC30/31

■ Communication settings

Make the communication settings by operating the key of the temperature controller.

Item	Set value
Transmission speed[*1]	9600bps
Data bit	8bits
Parity bit	Disable
Stop bit	2bits
Station address[*2][*3]	0 to 127

[*1] The transmission speed setting must be consistent with that of the GOT side.
[*2] Do not set to "0".
[*3] Select the station address without overlapping with that of other units.

3.5.5 Connecting to CMC10L
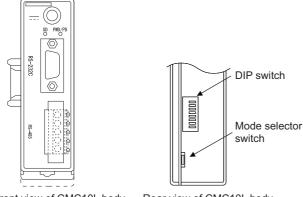

■ Communication settings

Make the communication settings by operating the DIP switch of the Interface converter

Item	Set value
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Frame length[*2]	9 to 15bits

[*1] The transmission speed setting must be consistent with that of the GOT side.
[*2] The sum of data length, parity bit and stop bit

■ Settings by switch
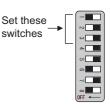

Front view of CMC10L body   Rear view of CMC10L body

(1) Setting DIP switches

  (a) Transmission speed settings
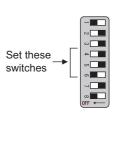

Transmission speed (bps)	Switch No.		
	1	2	3
9600	ON	OFF	ON

38400	ON	ON	ON

Set these switches
  (b) Frame length settings

Frame length	Switch No.		
	4	5	6
8bits	OFF	OFF	OFF
9bits	ON	OFF	OFF
10bits	OFF	ON	OFF
11bits	ON	ON	OFF
12bits	OFF	OFF	ON
13bits	ON	OFF	ON
14bits	OFF	ON	ON
15bits	ON	ON	ON

Set these switches
  (c) Connecting terminating resistors

Terminating resistor	Switch No.
	8
Enable	ON
Disable	OFF

Set these switches

(2) Mode selector switch settings
  Set the switch to "TERMINAL".

3.5.6 Connecting to DMC50

■ Communication settings
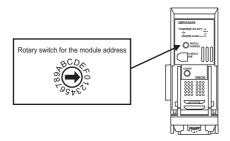

Make the communication settings by operating the Smart Loader Package (SLP-D50/SLP-H21)of the temperature controller.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Communication mode	CPL
Data bit	8bits (fixed)
Parity bit	Even (fixed)
Stop bit	1bit (fixed)
Module address[*2][*3][*4]	0 to F

    *1   Adjust the settings with GOT settings.
    *2   Set the module address using the rotary switch for module address.
    *3   Do not set to "0".
    *4   Select the module address without overlapping with that of other units.

■ Module address setting

Set the module address using the rotary switch for module address.

3.5.7 Connecting to SDC45/46

■ Communication settings

Make the communication settings by operating the Smart Loader Package (SLP-C45) of the temperature controller.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Communication mode[*2]	CPL
Data bit	7bits, 8bits
Parity bit[*1]	Odd, even, none
Stop bit	1bit, 2bits
Communication minimum response time[*5]	1 to 250ms
Station address[*3][*4]	0 to 120

    *1   Adjust the settings with GOT settings.
    *2   Set to CPL.
    *3   Do not set to "0".
    *4   Select the station address without overlapping with that of other units.
    *5   When using the interface converter CMC10L, set the communication minimum response time to 3ms or more.

3.5.8 Connecting to CMS, CMF015

■ Communication settings

Make the communication settings by operating the key of the control equipment.

Item	Set value
Transmission speed[*1]	9600bps
Communication condition selection	0: 8-bit data length, Even parity, Stop bit 1
	1: 8-bit data length, Non parity, Stop bit 2
Station address[*2][*3]	0 to 99

    *1   Adjust the settings with GOT settings.
    *2   Do not set to "0".
    *3   Select the station address without overlapping with that of other units.

3.5.9 Connecting to CML, CMF050

■ Communication settings

Make the communication settings by operating the key of the control equipment.

Item	Set value
Transmission speed[*1]	9600bps
Communication condition selection[*1]	00: 8-bit data length, Even parity, Stop bit 1
	01: 8-bit data length, Non parity, Stop bit 2
Station address[*2][*3]	0 to 7F

    *1   Adjust the settings with GOT settings.
    *2   Do not set to "0".
    *3   Select the station address without overlapping with that of other units.

3.5.10 Connecting to MQV

■ Communication settings

Make the communication settings by operating the key of the control equipment.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Communication condition selection[*1]	00: 8-bit data length, Even parity, Stop bit 1
	01: 8-bit data length, Non parity, Stop bit 2
Station address[*2][*3]	0 to 127

    *1   Adjust the settings with GOT settings.
    *2   Do not set to "0".
    *3   Select the station address without overlapping with that of other units.

3.5.11　Connecting to MPC

■ Communication settings

Make the communication settings by operating the key of the control equipment.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Communication condition selection[*1]	0: 8-bit data length, Even parity, Stop bit 1
	1: 8-bit data length, Non parity, Stop bit 2
Station address[*2][*3]	0 to 127

　　[*1]　Adjust the settings with GOT settings.
　　[*2]　Do not set to "0".
　　[*3]　Select the station address without overlapping with that of other units.

3.5.12　Connecting to PBC201-VN2

■ Communication settings

Make the communication settings by operating the key of the control equipment.

Item	Set value
Communication protocol	CPL
Transmission speed[*1]	9600bps, 19200bps, 38400bps, 115200bps
Communication condition selection[*1] (Fixed 8-bit data length)	0:Even parity, Stop bit 1
	1:Odd parity, Stop bit 1
	2:Non parity, Stop bit 2
Station address[*2][*3]	0 to 126

　　[*1]　Adjust the settings with GOT settings.
　　[*2]　Do not set to "0".
　　[*3]　Select the station address without overlapping with that of other units.

3.5.13　Connecting to MVF

■ Communication settings
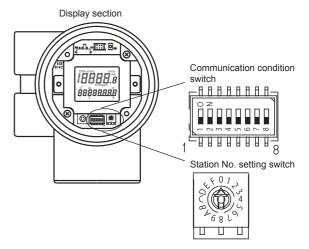

Make the communication settings by operating the switch of the control equipment.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
Communication condition selection[*1]	8-bit data length, Even parity, Stop bit 1
	8-bit data length, Non parity, Stop bit 2
Station address[*2][*3]	0 to F

　　[*1]　Adjust the settings with GOT settings.
　　[*2]　Do not set to "0".
　　[*3]　Select the station address without overlapping with that of other units.

■ Settings by switch

Display section

Communication condition switch

Station No. setting switch

(1) Transmission speed settings

Set the communication condition switch.

Transmission speed (bps)	Switch No.		
	1	2	3
9600	ON	ON	OFF
19200	ON	OFF	OFF

(2) Communication condition selection

Set the communication condition switch.

Communication condition	Switch No.
	4
8-bit data length, Even parity, Stop bit 1	OFF
8-bit data length, Non parity, Stop bit 2	ON

(3) Station address setting

Set the station address switch.

Station No. setting switch

3.5.14 Connecting to AUR350C, AUR450C

■ Communication settings

Make the communication settings by operating the Smart Loader Package (SLP-A35, SLP-A45) of the control equipment.
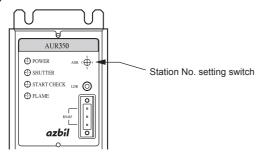

Item	Set value
Transmission speed[1]	9600bps, 19200bps
Communication condition selection[1]	8-bit data length, Even parity, Stop bit 1
	8-bit data length, Non parity, Stop bit 2
Station address[2][3]	0 to F

[1] Adjust the settings with GOT settings.
[2] Do not set to "0".
[3] Select the station address without overlapping with that of other units.

■ Station address setting
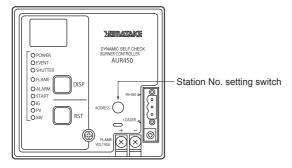

Set the station address switch.

(1) For AUR350C

Station No. setting switch

(2) For AUR450C

Station No. setting switch

3.5.15 Connecting to RX

■ Communication settings

Make the communication settings by operating the Smart Loader Package (SLP-RX) of the control equipment.

Item	Set value
Transmission speed[1]	9600bps, 19200bps ,38400bps
Communication condition selection[1]	Even parity stop 1 (8-bit data length, Even parity, Stop bit 1)
	Even parity stop 2 (8-bit data length, Even parity, Stop bit 2)
	Odd parity stop 1 (8-bit data length, Odd parity, Stop bit 1)
	Odd parity stop 2 (8-bit data length, Odd parity, Stop bit 2)
Station address[2][3]	1 to 32

[1] Adjust the settings with GOT settings.
[2] Do not set to "0".
[3] Select the station address without overlapping with that of other units.

3.5.16 Connecting to CMC10B

■ Communication settings
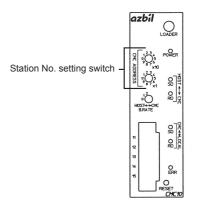

Make the communication settings by operating the Smart Loader Package (SLP-CM1) of the control equipment.

Item	Set value
Transmission speed[1]	9600bps, 19200bps
Communication format[1]	0:8-bit data length, Even parity, Stop bit 1
	1:8-bit data length, Non parity, Stop bit 2
Station address[2][3]	0 to 99

[1] Adjust the settings with GOT settings.
[2] Do not set to "0".
[3] Select the station address without overlapping with that of other units.

■ Station address setting

Set the station address switch.

Station No. setting switch

3.5.17 Connecting to AHC2001 CPU

■ Communication settings

Make the communication settings by operating the Smart Loader Package (SLP-D50/SLP-H21)of the temperature controller.

Item	Set value
Transmission speed[1]	9600bps, 19200bps, 38400bps, 57600bps
Communication mode[2]	0: MODBUS 1: CPL
Data bit	8bits (fixed)
Parity bit	Even (fixed)
Stop bit	1bit (fixed)
Station address[3]	1 to 15[4]

[1] Adjust the settings with GOT settings.
[2] Set this item to 1: CPL.
[3] Select the station address without overlapping with that of other units.
[4] The station address for AHC2001 ranges from 1 to 127. However, use station address from 1 to 15, which are the range for DMC50.

3.5.18 Connecting to AHC2001 SCU

■ Communication settings

Make the communication settings by operating the Smart Loader Package (SLP-D50/SLP-H21)of the temperature controller.
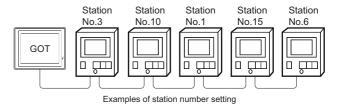

Item	Set value
Transmission speed[1]	9600bps, 19200bps, 38400bps
Data bit[1]	7bits, 8bits
Parity bit[1]	0: None, 1:Even, 2: Odd
Stop bit[1]	1bit, 2bits
Half duplex/Full duplex[2]	0: Half duplex, 1: Full duplex
Space sending	0 (fixed)
Protocol setup[3]	1 to 30

[1] Adjust the settings with GOT settings.
[2] Set this item to 0: Half duplex.
[3] Set this item to 2: CPL.

3.5.19 Station number setting

Set each station number so that no station number overlaps.
The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

Examples of station number setting

(1) Direct specification

When setting the device, specify the station number of the control equipment of which data is to be changed.

Model name	Specification range
SDC40A/40B/40G, SDC15, SDC25/26, SDC35/36, SDC20/21, SDC30/31 CML, CMF050, MQV, MPC	1 to 127
PBC201-VN2	1 to 126
SDC45/46	1 to 120
CMS, CMF015, CMC10B	1 to 99
RX	1 to 32
DMC10, DMC50, MVF, AUR350C, AUR450C, AHC2001[1]	1 to 15

[1] The station number for AHC2001 ranges from 1 to 127. However, use station numbers from 1 to 15, which are the range for DMC50.

3. CONNECTION TO AZBIL CONTROL EQUIPMENT
3.5 Control Equipment Side Setting

(2) Indirect specification

When setting the device, indirectly specify the station number of the inverter of which data is to be changed using the 16-bit GOT internal data register (GD10 to GD25).

When specifying the station No. from the following table on GT Designer3, the value of GD10 to GD25 compatible to the station No. specification will be the station No. of the control equipment.

Specification station No.		Compatible device	Setting range
DMC50 AHC2001	Other than DMC50		
100	200	GD10	
101	201	GD11	
102	202	GD12	1 to 127: For SDC40A/40B/40G, SDC15, SDC25/26, SDC35/36, SDC20/21, SDC30/31, CML, CMF050, MQV, MPC
103	203	GD13	
104	204	GD14	
105	205	GD15	
106	206	GD16	1 to 126: PBC201-VN2
107	207	GD17	1 to 120: SDC45/46
108	208	GD18	1 to 99: CMS, CMF015, CMC10B
109	209	GD19	1 to 32: RX
110	210	GD20	1 to 15: DMC10, DMC50, MVF, AUR350C, AUR450C, AHC2001[1]
111	211	GD21	For the setting other than the above, error (dedicated device is out of range) will occur.
112	212	GD22	
113	213	GD23	
114	214	GD24	
115	215	GD25	

[1] The station number for AHC2001 ranges from 1 to 127. However, use station numbers from 1 to 15, which are the range for DMC50.

3.6 Device Range that Can Be Set
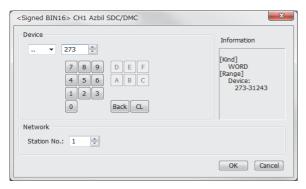

The device ranges of controller that can be used for GOT are as follows.
Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.
The device specifications of controllers may differ depending on the models, even though belonging to the same series.
Please make the setting according to the specifications of the controller actually used.
When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

For Azbil SDC/DMC Series

For Azbil DMC50

Item	Description	
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.	
Information	Displays the device type and setting range which are selected in [Device].	
Network	Set the monitor target of the set device.	
	Station	To monitor the control equipment of the specified station No. • When Azbil SDC/DMC Series is used. 0 to 127 :To monitor the control equipment of the specified station No. 200 to 215 :To specify the station No. of the control equipment to be monitored by the value of GOT data register (GD).[*1] • When Azbil DMC50 is used. 1 to 15: To specify the station No. of the COM module or control equipment to be monitored. 100 to 115: To specify the station No. of the COM module or control equipment to be monitored, and the Sub Station of the control equipment by the value of GOT data register (GD).[*2]
	Sub Station	Specify the sub station number of the control equipment connected to the COM module specified in [Station] to monitor it. (0 to 15)If the specified [SubStation] is 0, the COM module/control equipment specified in [Station] is monitored. For AHC2001, the sub station number is ignored.
Switch to the device define dialog	Device definition can be checked.	

*1 The following shows the relation between station numbers of the control equipment and the GOT data register.

Station No.	GOT data register (GD)	Setting range
200	GD10	
201	GD11	0 to 127
:	:	(If setting a value outside the range above, a device
214	GD24	range error occurs.)
215	GD25	

*2 From the value of GD10 to 25, the upper 8bits are set for station No., and the lower 8bits for the Sub Station.
In this case, the setting of [Sub Station] is invalid.
The following shows the relation between station numbers of the control equipment and the GOT data register.

Station No.	GOT data register (GD)	Setting range
100	GD10	
101	GD11	
:	:	0x0000 to 0xFFFF
114	GD24	
115	GD25	

Example: When [Station No.] is set to 100
When [Station No.] is set to 100, the monitoring target is set based on the GD10 value.
GD10 = 0x010A
(Upper 8bits) 0x01 → Station No.: 1
(Lower 8bits) 0x0A → Sub Station: 10

POINT

Station No. and Sub Station of AZBIL DMC50

The station No. and Sub Station set when using AZBIL DMC50 correspond to NW No. and Station number of MITSUBISHI PLC, respectively.

3.6.1 AZBIL SDC/DMC Series

	Device name	Setting range	Device No. representation
Bit device	The bit specification of the word device	Setting range of each word device	—
Word device	Data (..)[1]	..273 to ..31243	Decimal

*1 Only 16-bit (1-word) designation is allowed.

3.6.2 AZBIL DMC50/AHC2001

	Device name	Setting range	Device No. representation
Double word device	Network Addresses (NA)[1]	0000 to FFFF	Hexadecimal
	Parameter Addresses (PA)[1]	00000 to FFFFF	Hexadecimal

*1 Only 32-bit (2-word) designation is allowed.

(a) Network Addresses (NA)
The following shows the network address settings and definitions.

Network Addresses	Definition
0000	Network Addresses

(b) Parameter Address (PA)
The following shows the parameter address settings and definitions.

Parameter Address	Definition
001	H/W Information
002	Date and Time Setup
021	AI Setup (High resolution type:standard inputs)
022	AI Setup (Special type)
023	AI Setup (High resolution type:option inputs)
041	AUX-IN Setup
045	AO Setup
061	DO Setup
071	TP Setup
0A1	MR20X Communication Setup
0A2	
0A3	Front Port Communication Setup
0C1	System Status
0C5	AI Alarm Log
0C3	Date and Time Display
0C4	System Alarm Log
0C6	AUX-IN Alarm Log

(Continued to next page)

Parameter Address	Definition
0E1	AI Status
0E2	AUX-IN Status
0E3	AO Status
0E5	DI Status
0E6	DO Status
0E7	TP Status
0E8	Zener Barrier Adjustment Counts
0F1	Present MR20X Communication Setup
0F2	
0F3	Front Port Active Communication Setup
103	Memory Usage Monitor
201	PID_A Options Control Action
202	PID_A Constants Proportional Band
203	PID_A Monitor SP
211	PID_CAS Options Control Action
212	PID_CAS Constants (master) Proportional Band
213	PID_CAS Constants (slave) Proportional Band
214	PID_CAS Monitor M_SP
234	Ra_PID Options Ra-PID Mode
235	Ra_PID Constants Proportional Band
236	Ra_PID Monitor SP
241	UP_PID Options Control Action
242	UP_PID Constants Proportional Band
243	UP_PID Monitor U_SP(Use SP)
301	TBL/TBR Setup Contact Point X1
C00	Pattern Setup
C01 to C63	Segment Setup
CF1	Pattern FB Monitor
801 to 9FF	Type label defined by the user

3.7 Precautions

■ Station number setting of the temperature controller system
   • When connecting to DMC10 or SDC
     Make sure to establish temperature controller system with No.1 station.
   • When connecting to DMC50 or AHC2001
     A COM module or temperature controller with the station number set with the host address must be included.

   ☞ 3.4.2 Communication detail settings

■ GOT clock control
   Since the control equipment does not have a clock function, the settings of "time adjusting" or "time broad cast" by GOT clock control will be disabled.

■ Disconnecting some of multiple connected equipment
   The GOT can disconnect some of multiple connected equipment by setting GOT internal device. For example, the faulty station where a communication timeout error occurs can be disconnected from connected equipment.
   For details of GOT internal device setting, refer to the following manual.

   ☞ GT Designer3 (GOT2000) Screen Design Manual

■ When DMC50/AHC2001 and DMC10/SDC are mixed
   GOT does not support connections with DMC50/AHC2001 and DMC10/SDC mixed.

■ Station number range for AHC2001
   The station number for AHC2001 ranges from 1 to 127. However, use station numbers from 1 to 15, which are the range for DMC50.

■ Device range for AHC2001
   The GOT only supports some devices for the AHC2001.
   Use the devices within the device range for the DMC50.

(Continued to next page)

*1 The CQM1-CPU11 is unable to communicate with GOT since the CQM1-CPU11 has no RS-232C interface.
*2 The C200HE-CPU11 does not support communication board.
Use a host Link unit.
*3 Some models do not have a clock function.
*4 The memory cassette equipped with a clock is required.
*5 The EM device of the CQM-CPU61 cannot be monitored.
*6 To use the C200H-CPU21/CPU22/CPU23, the memory cassette equipped with a clock is required.
The C200H-CPU01/CPU02/CPU03 does not support the clock function.
*7 The C200HE-CPU11 does not support the clock function.
*8 For CP1E (N type) CPU modules with 20 or less I/O points, only the direct CPU connection is available.
*9 The direct CPU connection is available for CJ2M-CPU1□ only.
*10 Use the CPU module Ver. V1 or later.

CONNECTION TO OMRON PLC
4.2.9   Connection Diagram

The following diagram shows the connection between the GOT and the PLC.

■ RS-232 cable

(1) Connection diagram

(a) RS-232 connection diagram 1)
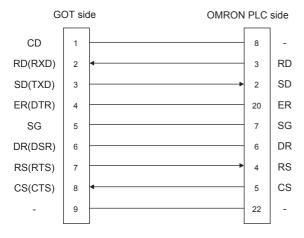

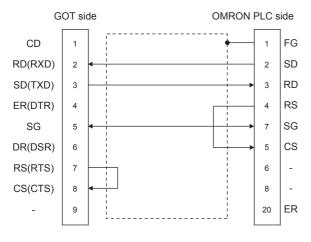

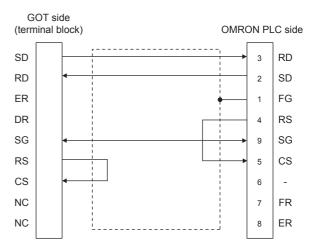

(b) RS-232 connection diagram 2)
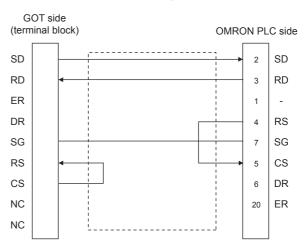

(c) RS-232 connection diagram 3)
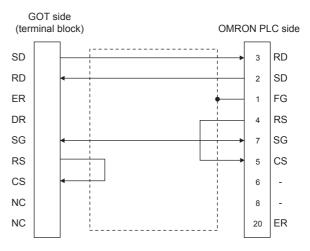

(d) RS-232 connection diagram 4)

(e) RS-232 connection diagram 5)

(f) RS-232 connection diagram 6)

(2) Precautions when preparing a cable

   (a) Cable length
      The length of the RS-232 cable must be 15m or less.

   (b) GOT side connector
      For the GOT side connector, refer to the following.

   ☞ 1.4.1 GOT connector specifications

   (c) OMRON PLC side connector
      Use the connector compatible with the OMRON PLC.
      For details, refer to the OMRON PLC user's manual.

■ RS-422 cable

POINT
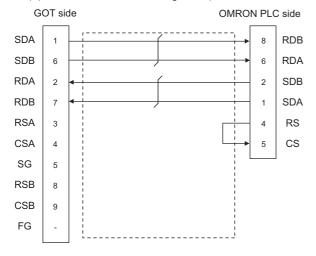

Differences in polarity between GOT and OMRON PLCs

The polarity of poles A and B in signal names is reversed between GOT and OMRON PLCs.
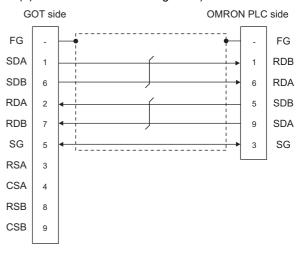

■ Connect a cable according to the following connection diagrams.

(1) Connection diagram

   (a) RS-422 connection diagram 1)

(b) RS-422 connection diagram 2)
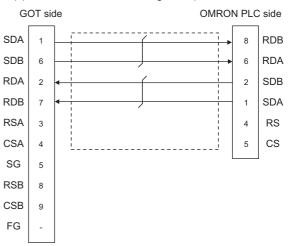

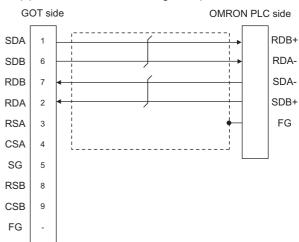

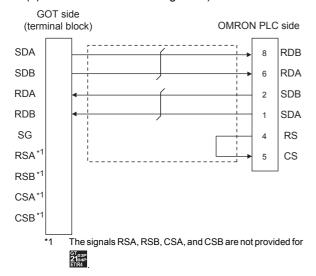

(c) RS-422 connection diagram 3)
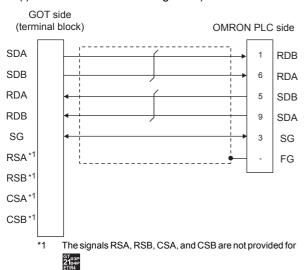

(d) RS-422 connection diagram 4)

RSB*1		
CSA*1		
CSB*1		

*1 The signals RSA, RSB, CSA, and CSB are not provided for GT21 03P 04P ET/R4.

(2) Precautions when preparing a cable

(a) Cable length
The distance between the GOT and the PLC of connection diagram 1), 2) and 3) must be 200 m or less.
The length of the RS-422 connection diagram 4) must be 50m or less.

(b) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(c) OMRON PLC side connector
Use the connector compatible with the OMRON PLC.
For details, refer to the OMRON PLC user's manual.

(3) Setting terminating resistors

(a) GOT side
• For GT27, GT25, GT23
Set the terminating resistor setting switch of the GOT main unit to "Disable".
• For GT21
Set the terminating resistor selector to "330Ω".

For details of terminating resistor settings, refer to the following.

☞ 1.4.3 Terminating resistors of GOT

(b) OMRON PLC side
When connecting an OMRON PLC to a GOT, a terminating resistor must be set to the OMRON PLC.
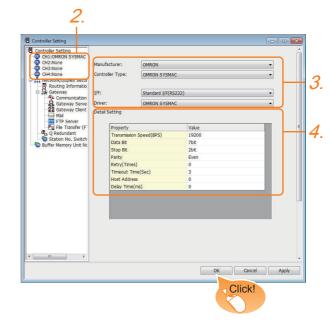

☞ OMRON PLC user's Manual

4.2.10   GOT Side Settings

■ Setting communication interface (Communication settings)
Set the channel of the equipment to be connected to the GOT.

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
• Manufacturer: OMRON
• Controller Type: Set the option according to the Controller Type to be connected.
• OMRON SYSMAC
• OMRON SYSMAC CS/CJ
• I/F: Interface to be used
• Driver: OMRON SYSMAC

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
Make the settings according to the usage environment.

☞ 4.2.10 ■ Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

■ Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	19200
Data Bit	7 bit
Stop Bit	2 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Host Address	0
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 19200bps)	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 7bits)	7bit (fixed)
Stop Bit	Specify the stop bit length for communications. (Default: 2bits)	2bit (fixed)
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	Even (fixed)
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address	Specify the host address (station No. of the PLC to which the GOT is connected) in the network of the GOT. (Default: 0)	0 to 31
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300 (ms)

POINT

(1) Communication interface setting by the Utility
    The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
    For details on the Utility, refer to the following manual.
    ☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
    When settings are made by GT Designer3 or the Utility, the latest setting is effective.

4.2.11   PLC Side Setting

POINT

OMRON PLC
For details of OMRON PLCs, refer to the following manuals.
☞ OMRON PLC user's Manual

Model name		Refer to

4. CONNECTION TO OMRON PLC
4.2 Serial Connection

4.2.12 Connecting to CPM2A, CQM1, CQM1H, C200Hα or RS-232C adapter

■ Device settings

Write the following set values to devices of each PLC CPU and initialize each port using a peripheral tool or DM monitor.

Device name	Set value
DM6645	0001H(fixed)

DM6646	b15 to b8 b7 to b0
	
	 2) 1)
	
	 1) RS-232C port transmission speed setting [*1][*2]
	 02H: 4800bps
	 03H: 9600bps
	 04H: 19200bps
	
	 2) RS-232C port communication frame format
	 03H (fixed): The settings are:
	      Start bit : 1 bit
	      Data length: 7 bits
	      Stop bit : 2 bits
	      Parity : Even bits

DM6647	0000 (fixed)
DM6648 [*3]	0000 to 0031
DM6649	0000 (fixed)

*1   Only transmission speeds available on the GOT side are shown.
*2   Set the same transmission speed of the RS-232C port as that of the GOT side.
*3   Set the RS-232C port host link station No. according to the Host Address on the GOT side.

HINT

Precautions for changing device values
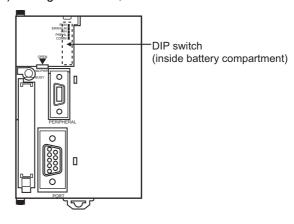

Before changing the device values, make sure that the switch settings have been changed as follows:
CPM2A:
The communication condition switch to "individual"
Other PLC CPU:
Front panel DIP switch SW5 to "OFF"

4.2.13 Connecting to CJ1, CJ2, CS1, CP1H, CP1L, or CP1E

■ Setting DIP switches
Set the DIP switches.
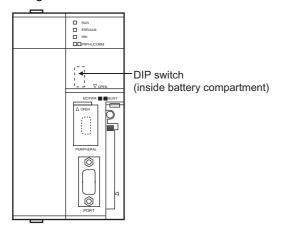

(1) Setting on the CJ1, CJ2
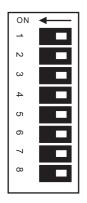

DIP switch (inside battery compartment)

Switch	Description	Settings
SW1	Enable/disable write to user memory (UM)	OFF
SW2	Enable/disable automatic transfer of user program at power ON	OFF
SW3	Free	OFF
SW4	CJ1: Peripheral port communication condition CJ2: Free	OFF
SW5	RS-232C communication condition	OFF
SW6	User customized DIP switch	OFF
SW7	Type specification for simplified backup	OFF
SW8	-	OFF

(2) Setting on the CS1
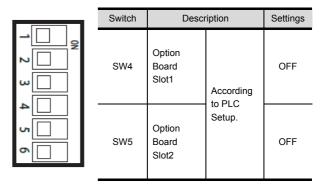

DIP switch
(inside battery compartment)

Switch	Description	Settings
SW1	Enable/disable write to user memory (UM)	OFF
SW2	Enable/disable automatic transfer of user program at power ON	OFF
SW3	Programming console message display language (Japanese/English)	OFF
SW4	Peripheral port communication condition	OFF
SW5	RS-232C communication condition	OFF
SW6	User customized DIP switch	OFF
SW7	Type specification for simplified backup	OFF
SW8	-	OFF

(3) Setting on the CP1H, CP1L

Dip switch

Switch	Description	Settings
SW4	Option Board Slot1	According to PLC Setup.	OFF
SW5	Option Board Slot2		OFF

(4) Setting on the CP1E
Settings by DIP switch are not required.

4. CONNECTION TO OMRON PLC
4.2 Serial Connection

■ Setting PLC system settings

(1) CJ1, CJ2, CS1
Make the PLC system settings.

Channel	Bit	Item	Set value
160	15	Arbitrary settings ON/OFF	1$_H$: Arbitrary settings (fixed)
	8 to 11	Serial communication mode	0$_H$: Upper link (fixed)
	3	Data bit	0$_H$: 7bits (fixed)
	2	Stop bit	0$_H$: 2bits (fixed)
	0 to 1	Parity	0$_H$: Even (fixed)
161	0 to 7	Port transmission speed[*1][*2]	00$_H$: 9600bps 05$_H$: 4800bps 06$_H$: 9600bps 07$_H$: 19200bps 08$_H$: 38400bps 09$_H$: 57600bps 0A$_H$: 115200bps
163	0 to 7	Host link station No.[*3]	0$_H$ to 1F$_H$: No.00 to 31

*1 Only transmission speeds available on the GOT side are shown.
*2 Set the same port transmission speed as that of the GOT side.
*3 Set the host link station No. according to the Host Address on the GOT side.

HINT

Precautions for changing the PLC system settings

Before changing the PLC system settings, make sure that the switch settings have been changed as follows:
CJ1, CJ2, CS1: Front panel DIP switch SW5 to "OFF"

(2) CP1H, CP1L, CP1E
Set the PLC system settings of the option slot connected to the GOT.

Item	Set value
Mode	Host link
Parameter	7, 2, E
Baud rate[*1][*2]	4800bps,9600bps,19200bps, 38400bps,57600bps,115200bps
Unit number[*3]	00 to 31

*1 Only transmission speeds available on the GOT side are shown.
*2 Set the same port transmission speed as that of the GOT side.
*3 Set the host link station No. according to the Host Address on the GOT side.

HINT

Precautions for changing the PLC system settings
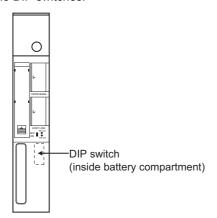

Before changing the PLC system settings, check the setting of the front DIP switch corresponding to the option slot used at the time of communication with GOT.

☞ (3)Setting on the CP1H, CP1L

4.2.14 Connecting to CV500/CV1000/CV2000 or CVM1

■ Setting DIP switches
Set the DIP switches.

DIP switch
(inside battery compartment)

(1) Host link RS-422/232 switch

RS-232

RS-422

Settings	
For RS-232 communication	For RS-422 communication
RS-232 (up)	RS-422 (down)

(2) DIP switches

Switch No.	Settings	
	For RS-232 communication	For RS-422 communication
6	OFF (no terminating resistor)	ON (terminating resistor attached)
5	OFF	
4	OFF	
3	OFF	
2	OFF	
1	OFF	

■ Setting PLC system settings
Make the PLC system settings.

Item	Set value
Transmission speed[1][2]	4800bps/9600bps/19200bps
Stop bit	2 stop bits (fixed)
Parity	Even (fixed)
Data bit	7bits (fixed)
Unit number[3]	00 to 31

[1] Only transmission speeds available on the GOT side are shown.
[2] Set the same transmission speed of the GOT.
[3] Set the station No. according to the Host Address on the GOT side.

4.2.15 Connecting to connection cable

■ Device settings
Write the following set values to devices of each PLC CPU and initialize each port using a peripheral tool or DM monitor.

Device name	Set value
DM6650	0001$_H$(fixed)
DM6651	b15 to b8 / b7 to b0 2) / 1) 1) RS-232C port transmission speed setting[1][2] 02$_H$: 4800bps 03$_H$: 9600bps 04$_H$: 19200bps 2) RS-232C port communication frame format 03$_H$ (fixed): The settings are: Start bit : 1 bit Data length: 7 bits Stop bit : 2 bits Parity : Even bits
DM6652	0000 (fixed)
DM6653[3]	0000 to 0031

[1] Only transmission speeds available on the GOT side are shown.
[2] Set the same transmission speed of the peripheral port as that of the GOT side.
[3] Set the peripheral port host link station No. according to the Host Address on the GOT side.

HINT

Precautions for changing device values
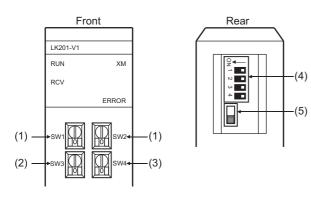

Before changing the device values, make sure that the switch settings have been changed as follows:
CPM2A: The communication condition switch to "individual"
CPM2C: The communication port function switch to "OFF"

4.2.16 Connecting to rack type host link unit

■ Switch setting on C200H-LK201-V1

Set the switches accordingly.

Front | Rear

(1) Setting Machine No. (SW1, SW2)

Set the Machine No. within the range of 00 to 31.
Set the station No. according to the Host Address on the GOT side.

Rotary switch	Description	Settings
SW1	Machine No. upper digit ($\times 10^1$)	0 to 3
SW2	Machine No. lower digit ($\times 10^0$)	0 to 9

(2) Setting transmission speed (SW3)

Set the same transmission speed of the GOT.

Setting[1]	Settings
4	4800bps
5	9600bps
6	19200bps

[1] Only transmission speeds available on the GOT side are shown.

4.2.17 Connecting to serial communication unit

■ Device settings

Write the following set values to devices of each PLC CPU and initialize each port using a peripheral tool or DM monitor.

Device name		Set value
Port 1	Port 2	
DM (m)	DM (m+10)	8000H(fixed): The settings are: Port setting: Arbitrary setting Serial communication mode: Host link Start bit: 1bit Data bit: 7bits Stop bit: 2bits Parity: Even
DM (m+1)	DM (m+11)	b15 to b8 / b7 to b0: 0H / 1) 1) Transmission speed*1*2 00H: 9600bps 08H: 38400bps 05H: 4800bps 09H: 57600bps 06H: 9600bps 0AH: 115200bps 07H: 19200bps
DM (m+2)	DM (m+12)	8000H(fixed)
DM (m+3) *3	DM (m+13) *3	8000H to 801FH

m = 30000 + (100 × unit No.)
*1 Only transmission speeds available on the GOT side are shown.
*2 Set the same transmission speed of the GOT.
*3 Set the host link station No. according to the Host Address on the GOT side.

4.2.18 Connecting to communication board, serial communication board (CQM1-SCB41)

■ Device settings
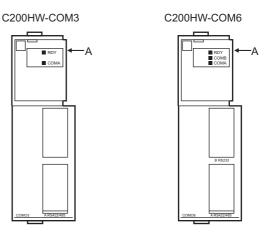

Write the following set values to devices of each PLC CPU and initialize each port using a peripheral tool or DM monitor.
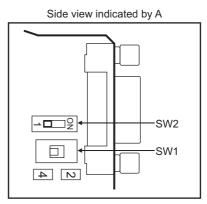

Device name		Set value
Port B	Port A	
DM6550	DM6555	0001H(fixed)
DM6551	DM6556	(see below)
DM6552	DM6557	0000 (fixed)
DM6553 *3	DM6558 *3	0000 to 0031

For DM6551 / DM6556:

b15 to b8	b7 to b0
2)	1)

1) Transmission speed[*1][*2]
02H:4800bps
03H:9600bps
04H:19200bps

2) Frame format setting
03H (fixed): The settings are:
Start bit :1 bit
Data length:7 bits
Stop bit :2 bits
Parity :Even bits

*1 Only transmission speeds available on the GOT side are shown.
*2 Set the same transmission speed as that of the GOT side.
*3 Set the host link station No. according to the Host Address on the GOT side.

■ Setting DIP switches (C200HW-COM3 and C200HW-COM6 only)

Set the DIP switches when performing the RS-422 communications on the C200HW-COM3 and C200HW-COM6.

C200HW-COM3   C200HW-COM6

Side view indicated by A

DIP switch		Set value
No.	Item	
SW1	RS-422/485 cable (2-wire/4-wire type) switching	4 (4-wire type)
SW2	Terminator ON/OFF	1 (no terminating resistor attached)

4.2.19 Connecting to serial communication board (CS1W-SCB21(-V1), CS1W-SCB41(-V1))

■ Device settings

Write the following set values to devices of each PLC CPU and initialize each port using a peripheral tool or DM monitor.
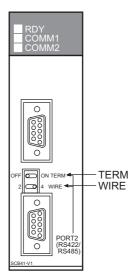

Device name		Set value
Port 1	Port 2	
D32000	D32010	8000H(fixed): The settings are: Port setting: Arbitrary setting Serial communication mode: Host link Start bit: 1bit Data bit: 7bits Stop bit: 2bits Parity: Even
D32001	D32011	b15 to b8: 0H, b7 to b0: 1) 1) Transmission speed[*1][*2] 00H: 9600bps, 08H: 38400bps 05H: 4800bps, 09H: 57600bps 06H: 9600bps, 0AH: 115200bps 07H: 19200bps
D32002	D32012	8000H(fixed)
D32003 [*3]	D32013 [*3]	0000H to 0001FH

*1 Only transmission speeds available on the GOT side are shown.
*2 Set the same transmission speed of the GOT.
*3 Set the host link station No. according to the Host Address on the GOT side.

■ Setting the DIP switches (CS1W-SCB41(-V1) only)

Set the DIP switches when performing the RS-422 communications on the CS1W-SCB41(-V1).

DIP switch		Set value
Name	Description	
WIRE	Setting(2-wire/4-wire) Switch	4 (4-wire type)
TERM	Terminator ON/OFF switch	OFF (no terminating resistor)

HINT

Precautions for changing the DM area
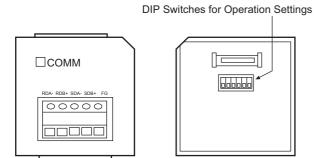

Before changing the DM area, make sure that the switch setting has been changed as follows.
CS1: Front panel DIP switch SW5 to "OFF"

4.2.20 Connecting to RS-422A/485 Option board

■ Setting DIP switches
Set the DIP switches.
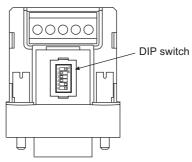

DIP Switches for Operation Settings

Switch No.	Settings	Description

3	OFF	4-wire type	2-wire or 4-wire selection
5	ON	RS control enabled	RS control selection for RD
6	ON	RS control enabled	RS control selection for SD

4.2.21 Connecting to RS-422A converter

■ Setting DIP switches
Set the DIP switches.
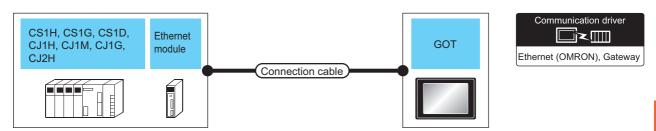

DIP switch

Switch No.	Settings	Description	
1	ON	Enable	Terminating resistance selection
2	OFF	4-wire type	2-wire or 4-wire selection
3	OFF	4-wire type	2-wire or 4-wire selection
5	ON	RS control enabled	RS control selection for RD
6	ON	RS control enabled	RS control selection for SD

4.3 Ethernet Connection

4.3.1 System configuration

PLC		Connection cable		GOT		Number of connectable equipment
Series	Ethernet module[3]	Cable model	Maximum segment length[2]	Option device	Model	
CS1H CS1G CS1D	CS1W-ETN21 CS1W-EIP21	Twisted pair cable[1] • 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5 • 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e	100m	- (Built into GOT)	GT 27 GT 25 GT 23 GT 21 04R GT 21 03P 04P ET/R4 GS	When PLC:GOT is N:1 The following shows the number of PLCs for 1 GOT TCP: 128 or less UDP: 128 or less When PLC:GOT is 1:N The following shows the number of GOTs for 1 PLC TCP: 16 or less[4] UDP: No limit number[5]
CS1D	CS1D-ETN21D					
CJ1H CJ1M CJ1G	CJ1W-ETN21 CS1W-EIP21					
CJ2H-CPU6□-EIP CJ2M-CPU3□	-					
	CJ1W-ETN21 CS1W-EIP21					
CJ2H-CPU6□-CJ2M-CPU1□	CJ1W-ETN21 CS1W-EIP21					

*1 The destination connected with the twisted pair cable varies with the configuration of the applicable Ethernet network system. Connect to the Ethernet module, hub, transceiver or other system equipment corresponding to the applicable Ethernet network system.

*2 A length between a hub and a node.
The maximum distance differs depending on the Ethernet device to be used.
The following shows the number of the connectable nodes when a repeater hub is used.
• 10BASE-T: Max. 4 nodes for a cascade connection (500m)
• 100BASE-TX: Max. 2 nodes for a cascade connection (205m)
When switching hubs are used, the cascade connection between the switching hubs has no logical limit for the number of cascades.
For the limit, contact the switching hub manufacturer.

*3 Product manufactured by OMRON Corporation. For details of the product, contact OMRON Corporation.

*4 If it is connected to devices other than the GOT using the connection, the number of connectable GOTs decreases.
For details, refer to the OMRON PLC user's manual.

*5 There is no restriction for the number of GOTs. However, if the number of GOTs increases, the communication becomes high-loaded, and it may affect the communication performance.

4.3.2 GOT side settings

■ Setting communication interface (Communication settings)

Set the channel of the connected equipment.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   - Manufacturer: OMRON
   - Controller Type: OMRON SYSMAC
   - I/F: Standard I/F (Ethernet): multi-channel connection
   - Driver: Ethernet (OMRON), Gateway

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 4.3.2 ■ Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

■ Communication detail settings

Make the settings according to the usage environment.

Property	Value
GOT Net No.	1
GOT Station	1
GOT Standard Ethernet Setting	192.168.3.18
GOT Communication Port No.	5001
Retry(Times)	3
Startup Time(Sec)	3
Timeout Time(Sec)	3
Delay Time(ms)	0

Item	Description	Range
GOT Net No.	Set the network No. of the GOT. (Default: 1)	1 to 127
GOT Station[*2]	Set the station No. of the GOT. (Default: 1)	1 to 254
GOT Standard Ethernet Setting	Set the GOT IP address, subnet mask, default gateway, peripheral S/W communication port No., transparent port No.	☞ GOT Standard Ethernet Setting
GOT Communication Port No.[*1]	Set the GOT port No. for the connection with the Ethernet module. (Default: 5018)	1024 to 5010, 5014 to 65534 (Except for 5011, 5012, 5013 and 49153)
Retry	Set the number of retries to be performed when a communication timeout occurs. When receiving no response after retries, the communication times out. (Default: 3times)	0 to 5times
Startup Time	Specify the time period from the GOT startup until GOT starts the communication with the PLC CPU. (Default: 3sec)	3 to 255sec
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 90sec
Delay Time	Set the delay time for reducing the load of the network/ destination PLC. (Default: 0ms)	0 to 10000 (×10ms)

*1 By setting of the OMRON PLC, set the same [GOT Communication Port No.] setting as that of [FINS UDP Port] of CX-Programmer.

*2 Each of [GOT Station] set in the communication detail setting and [Station] set in the Ethernet setting must be set to different station numbers.

☞ ■ Ethernet setting

■ GOT Standard Ethernet Setting

Make the settings according to the usage environment.

Item	Description	Range
GOT IP Address	Set the IP address of the GOT. (Default: 192.168.3.18)	0.0.0.0 to 255.255.255.255
Subnet Mask	Set the subnet mask for the sub network. (Only for connection via router) If the sub network is not used, the default value is set. (Default: 255.255.255.0)	0.0.0.0 to 255.255.255.255
Default Gateway	Set the router address of the default gateway where the GOT is connected. (Only for connection via router) (Default: 0.0.0.0)	0.0.0.0 to 255.255.255.255
Peripheral S/W Communication Port No.	Set the GOT port No. for the S/W communication. (Default: 5015)	1024 to 5010, 5014 to 65534 (Except for 5011, 5012, 5013 and 49153)
Transparent Port No.	Set the GOT port No. for the transparent function. (Default: 5014)	1024 to 65534 (Except for 5011 to 5013 and 49153 to 49170)

*1   By setting of the OMRON PLC, set the same [GOT Communication Port No.] setting as that of [FINS UDP Port] of CX-Programmer.

■ Ethernet setting

Item	Description	Set value
Host	The host is displayed. (The host is indicated with an asterisk (*).)	-
N/W No.	Set the network No. of the connected Ethernet module. (Default: blank)	1 to 127
Station*1	Set the station No. of the connected Ethernet module. (Default: blank)	1 to 254
Type	OMRON (fixed)	OMRON (fixed)
IP Address	Set the IP address of the connected Ethernet module. (Default: blank)	PLC side IP address
Port No.	Set the port No. of the connected Ethernet module. (Default: 9600)	256 to 65534
Communication format	Select a communication protocol. (Default: UDP)	UDP, TCP

*1   Each of [GOT Station] set in the communication detail setting and [Station] set in the Ethernet setting must be set to different station numbers.

☞ ■ Communication detail settings

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication setting] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

■ IP Filter Setting

To improve security, the GOT 2000 series supports the IP Filter Setting.

For details on the IP Filter Setting, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

4.3.3 PLC side setting

■ Communication settings

For the PLC communication setting, set with a software for programming apparatus (CX-Programmer Ver.3.20 or later).

(1) CX-Programmer setting

Item		Setting range			
		Automatic conversion method (dynamic)[4]	Automatic conversion method (static)[4][5]	IP address table method[4][6]	Combined method[4][6]
Ethernet module CPU highly-functional module	Global	All 1 (Default)	All 1 (Default)	All 1 (Default)	All 1 (Default)
	IP address[1]	[192]. [168]. [0]. [1][3]	[192]. [168]. [0]. [1][3]	[192]. [168]. [0]. [1]	[192]. [168]. [0]. [1]
	Subnet Mask	[255]. [255]. [255]. [0]	[255]. [255]. [255]. [0]	[255]. [255]. [255]. [0]	[255]. [255]. [255]. [0]
	FINS UDP port[1]	9600	9600	9600	9600
	IP address conversion	Automatic conversion method (dynamic)	Automatic conversion method (static)	IP address table method	Combined method
	IP address table	-	-	10 [192]. [168]. [0]. [1] 11 [192]. [168]. [0]. [18]	10 [192]. [168]. [0]. [1]
	Transmission speed	Automatic detection (Default)	Automatic detection (Default)	Automatic detection (Default)	Automatic detection (Default)
	Node IP Address dynamically change[2]	Change dynamically (Default)	Change dynamically (Default)	Change dynamically (Default)	Change dynamically (Default)

*1 Set the same [IP address] and [FINS UDP Port] settings as that of [IP address] and [Port No.] of the GT Designer3 Ethernet setting.

*2 The Node IP Address dynamically change function is available only when the Ethernet module to be used is Ver.1.3 or later.
For the setting, set in the module setting of CX-ProgrammerVer.5.0 or later or in the WEB function.
For details of Node IP Address dynamically change, refer to the following manual.

☞ OMRON PLC user's Manual

*3 Set the same lowermost bit of the [IP address] setting as that of the node setting switch of the module.

*4 Set the same [GOT Port No. (Communication)] In Communication detail settings as that of [Port No.] of the Ethernet setting.

*5 Set the same lowermost bit of the [GOT IP address] in Communication detail settings as that of [GOT PLC No.].

*6 Set the same lowermost bit of the [GOT IP address] and [GOT PLC No.] in Communication detail settings of GT Designer3 as that of [IP address table].

4.3.4 Precautions

■ When connecting to multiple GOTs

(1) Setting PLC No.
   When connecting two or more GOTs in the Ethernet network, set each [PLC No.] to the GOT.

   ☞ 4.3.2 ■ Ethernet setting

(2) Setting IP address
   Do not use the IP address "192.168.0.18" when using multiple GOTs with the GOT 1000 series mixed.
   A communication error may occur on the GOT with the IP address.

■ When setting IP address

Do not use "0" and "255" at the end of an IP address. (Numbers of *.*.*.0 and *.*.*.255 are used by the system.)
The GOT may not monitor the controller correctly with the above numbers.
Consult with the administrator of the network before setting an IP address to the GOT and controller.

■ When connecting to the multiple network equipment (including GOT) in a segment

By increasing the network load, the transmission speed between the GOT and PLC may be reduced.
The following actions may improve the communication performance.
• Using a switching hub
• More high speed by 100BASE-TX (100Mbps)
• Reduction of the monitoring points on GOT

4.4　Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description	
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.	
Information	Displays the device type and setting range which are selected in [Device].	

4.4.1　OMRON PLC

	Device name	Setting range	Device No. representation
Bit device	I/O relay/internal auxiliary relay (...)	..000000 to ..614315	Decimal + Hexadecimal
	Data link relay (LR)	LR00000 to LR19915	
	Auxiliary memory relay (AR)	AR000000 to AR147115 AR1000000 to AR1153515	
	Holding relay (HR)	HR00000 to HR51115	
	Internal auxiliary relay/Work relay (WR)	WR00000 to WR51115	
	Timer contact (TIM)	TIM0000 to TIM4095	Decimal
	Counter contact (CNT)	CNT0000 to CNT4095	
	The bit specification of the word device[1][4] (except data link relay, auxiliary memory relay, holding relay and internal auxiliary relay.)	Setting range of each word device	-
Word device	I/O relay/internal auxiliary relay (...)	..0000 to ..6143	Decimal
	Data link relay (LR)	LR000 to LR199	
	Auxiliary memory relay (AR)	AR0000 to AR1471 AR10000 to AR11535	
	Holding relay (HR)	HR000 to HR511	
	Internal auxiliary relay/Work relay (WR)	WR000 to WR511	
	Data memory (DM)	DM00000 to DM32767	
	Timer (current value) (TIM)[3][5]	TIM0000 to TIM4095	
	Counter (current value) (CNT)[3][5]	CNT0000 to CNT4095	
	Extension data memory (EM current bank)[2]	EM00000 to EM32767	
	Extension data memory (E0 to EC: 13banks)[2]	E000000 to E032767 : E1800000 to E1832767	

[1]　When executing the touch switch function set during the bit specification of the word device, do not write any data to the word device through the sequence program.

[2]　Writing or reading the extension data memory using multiple banks is not allowed.

[3]　Timer (current value) and counter (current value) are valid within the range of 0 to 9999.
(This applies to the 16 bit/32 bit device data.)

[4]　This is not supported by GT10.

[5]　"Timer (current value)" and "Counter (current value)" are handled as BCD values by the PLC.
If the connection form between the PLC and the GOT is serial, however, they are handled as unsigned binary 16-bit data by the GOT. Set the data type of "Monitor object" in the GOT to "Unsigned BIN16".

MEMO

5

CONNECTION TO OMRON TEMPERATURE CONTROLLER

5. CONNECTION TO OMRON TEMPERATURE CONTROLLER

5.1 Connectable Model List

The following table shows the connectable models.
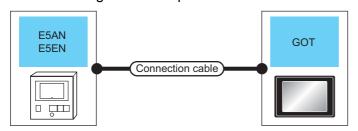

Series	Model name	Communication Type	Connectable GOT	Refer to
THERMAC NEO	E5AN E5EN E5CN E5GN	RS-232 RS-422	**GT 27** **GT 25** **GT 23** **GT 21** **GS**	☞ 5.2.1

*1   Connect it to the RS-232 interface (built into GOT).

5.3 Connection Diagram

The following diagram shows the connection between the GOT and the PLC.

5.3.1 RS-232 cable

■ Connection diagram

RS-232 connection diagram 1)
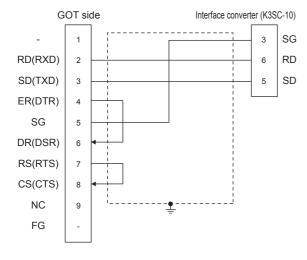

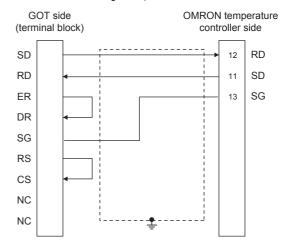

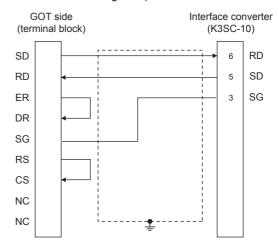

RS-232 connection diagram 2)

RS-232 connection diagram 3)

RS-232 connection diagram 4)
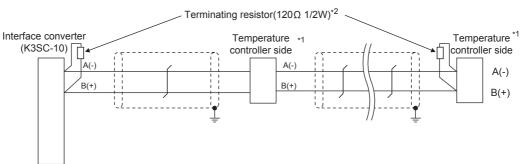

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-232 cable must be 15m or less

(2) GOT side connector
For the GOT side connector, refer to the following.
☞ 1.4.1 GOT connector specifications

(3) OMRON temperature controller side connector
Use the connector compatible with the OMRON temperature controller.
For details, refer to the user's manual of the OMRON temperature controller.

5.3.2　RS-485 cable

■ Connection diagram
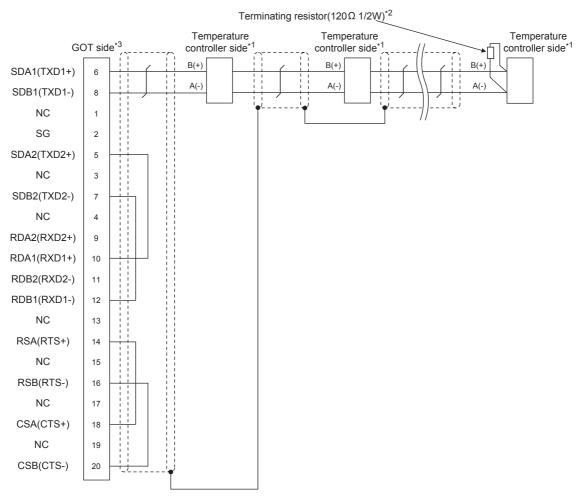

(1)　RS-485 connection diagram 1)

*1　Pin No. of temperature controller differs depending on the model.Refer to the following.
*2　Terminating resistor should be provided for a temperature controller and an interface converter which will be terminating resistors.

Signal name	Model of temperature controller			Interface converter (K3SC-10)
	E5AN E5EN E5CN	E5GN	E5ZN	
	Pin No.	Pin No.	Pin No.	Pin No.
A(-)	12	6	24	8

B(+)	11	5	23

(5) RS-485 connection diagram 5)

*1 Pin No. of temperature controller differs depending on the model. Refer to the following.
*2 Terminating resistor should be provided for a temperature controller and an interface converter which will be terminating resistors.
*3 Set the terminating resistor of GOT side, which will be a terminal, to "110Ω".

☞ 1.4.3 Terminating resistors of GOT

Signal name	Model of temperature controller		
	E5AN E5EN E5CN	E5GN	E5ZN
	Pin No.	Pin No.	Pin No.
A(-)	12	6	24
B(+)	11	5	23

*4 The signals RSA, RSB, CSA, and CSB are not provided for [GT03P 2104P ET/R4]. Return connection is not required.

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-485 cable must be 500m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(3) OMRON temperature controller side connector
Use the connector compatible with the OMRON temperature controller.
For details, refer to the user's manual of the OMRON temperature controller.

■ Setting terminating resistors

(1) GOT side
Set the terminating resistor setting switch of the GOT main unit to "100 OHM".
For details of terminating resistor settings, refer to the following.

☞ 1.4.3 Terminating resistors of GOT

(2) OMRON temperature controller side
When connecting a OMRON temperature controller to the GOT, the terminating resistor must be connected to the OMRON temperature controller.
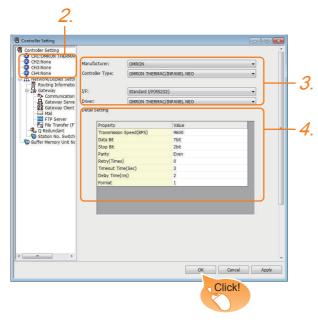

☞ User's Manual of the OMRON temperature controller

5.4 GOT Side Settings

5.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: OMRON
   • Controller Type: OMRON THERMAC/INPANEL NEO
   • I/F: Interface to be used
   • Driver: OMRON THERMAC/INPANEL NEO

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 5.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

5.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	7 bit
Stop Bit	2 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Delay Time(ms)	2
Format	1

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 7bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 2bits)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	3 to 30sec
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 2ms)	0 to 300 (ms)
Format	Select the communication format. (Default: 1) format 1: only continuous access format 2: continuous and random access	1/2

POINT

(1) Delay Time
When connecting to the temperature controller E5ZN, set the delay time to 5ms or more.

(2) Format setting
The compatible format of temperature controller differs depending on models.

Model	Compatible format
E5AN, E5CN, E5EN, E5GN	Format 1 only
E5ZN	Format 1 or Format 2

For the continuous access and random access of the temperature controller, refer to the following manual.

☞ User's Manual of the OMRON temperature controller

(3) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(4) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

5.5 Temperature Controller Side Setting

POINT

OMRON temperature controller

For details of OMRON temperature controller, refer to the following manual.

☞ User's Manual of the OMRON temperature controller

Model name		Refer to
Temperature controller	E5AN, E5EN, E5CN, E5GN	5.5.1
	E5ZN	5.5.2
Interface converter	K3SC-10	5.5.3

5.5.1 Connecting E5AN, E5EN, E5CN, E5GN

Set the communication data by operating the key of the temperature controller.

Item	Set value
Protocol	CompoWay/F (Sysway)
Transmission speed[*1]	9600bps, 19200bps
Data bit[*1]	8 bits, 7 bits
Parity bit[*1]	Odd, Even, None
Stop bit[*1]	1bit, 2bits
Communication unit No.[*2]	0 to 99
CMWT (Communications writing) [*3]	ON

*1 Adjust the settings with GOT settings.
*2 Select the communication unit No. without overlapping with that of other units.
*3 When changing the device values of the temperature controller from the GOT, turn ON CMWT (Communications writing) in advance.

5.5.2 Connecting E5ZN

Set the communication data by operating the key of the temperature controller.

Item	Set value
Transmission speed[*1]	9600bps, 38400bps
Data bit[*1]	8 bits, 7 bits
Parity bit[*1]	Odd, Even, None
Stop bit[*1]	1bit, 2bits
Communication unit No.[*2]	0 to 15
CMWT (Communications writing) [*3]	ON

*1 Adjust the settings with GOT settings.
*2 Select the communication unit No. without overlapping with that of other units.
*3 When changing the device values of the temperature controller from the GOT, turn ON CMWT (Communications writing) in advance.

5.5.3 Connection to interface converter (K3SC-10)
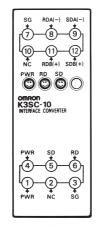

■ Communication settings

Make the communication settings by operating the DIP switch of the temperature controller.
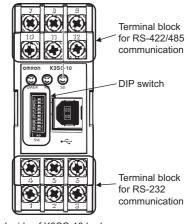

Item	Set value
Transmission speed[*1]	19200bps, 38400bps
Data bit[*1]	7 bits, 8 bits
Parity bit[*1]	Odd, Even, None
Stop bit[*1]	1bit, 2bits
Communication Type	RS-232↔RS485
Echo back[*2]	With, Without

*1 Adjust the settings with GOT settings.
*2 Set to "Without".

■ Settings by DIP switch

Front of K3SC-10 body
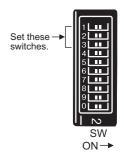

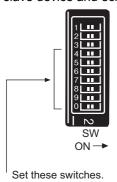

Inside of K3SC-10 body
(When removing the front cover)

(1) Transmission speed settings

Transmission speed (bps)	Switch No.		
	1	2	3
1200	ON	OFF	OFF
2400	OFF	ON	OFF
4800	ON	ON	OFF
9600	OFF	OFF	OFF
19200	ON	OFF	ON
38400	OFF	ON	ON

Set these switches.

SW
ON→

(2) Settings of data length, parity bit, stop bit, master/slave device and echoback

SW
ON →

Set these switches.
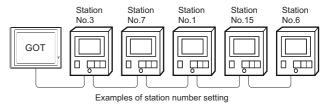

Setting item	Set value	Switch No.						
		4	5	6	7	8	9	0
Data bit	7bits	OFF						
	8bits	ON						
Stop bit	2bits		OFF					
	1bit		ON					
Parity	Even			OFF	OFF			
	Odd			ON	OFF			
	None			OFF	ON			
Communication Type	RS232↔RS422					OFF	ON	
	RS-232↔RS485					OFF	OFF	
Echo back	Without							OFF
	With							ON

5.5.4 Station No. settings

Set each station number so that no station number overlaps.
The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

Examples of station number setting

(1) Direct specification
When setting the device, specify the station number of the temperature controller of which data is to be changed.

Model name	Specification range
E5AN, E5EN, E5CN, E5GN	0 to 99
E5ZN	0 to 15

(2) Indirect specification
When setting the device, indirectly specify the station number of the temperature controller of which data is to be changed using the 16-bit GOT internal data register (GD10 to GD25).
When specifying the station No. from 100 to 115 on GT Designer3, the value of GD10 to GD25 compatible to the station No. specification will be the station No. of the temperature controller.

Specification station NO.	Compatible device	Setting range
100	GD10	
101	GD11	
102	GD12	
103	GD13	
104	GD14	
105	GD15	
106	GD16	0 to 99: For E5AN, E5EN, E5CN or E5GN
107	GD17	0 to 15: For E5ZN
108	GD18	For the setting other than the above, error
109	GD19	(dedicated device is out of range) will
110	GD20	occur.
111	GD21	
112	GD22	
113	GD23	
114	GD24	
115	GD25	

(3) All station specification
Target station differs depending on write-in operation or read-out operation.
 • For write-in operation, all station will be a target.
 • For read-out operation, only one station will be a target.

5.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information	Displays the device type and setting range which are selected in [Device].
Network	Set the monitor target of the set device.
	All	Select this item when writing data to all temperature connected. During monitoring, the temperature controller of station No.0 is monitored. (When writing the data in numerical input, the data is written to all connected temperature controllers during input, and the temperature controller of station No. 0 is monitored during other than input (displaying).)
	Station No.	Select this item when monitoring the temperature controller of the specified station No. After selecting, set the station No. in the following range. 0 to 99: To monitor the temperature controller of the specified station No. 100 to 115: To specify the station No. of the temperature controller to be monitored by the value of GOT data register (GD).[1]
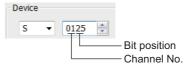

*1 The following table shows the relation between station numbers of the PLC and the GOT data register.

Station No.	GOT data register (GD)	Setting range
100	GD10	0 to 99 (If setting a value outside the range above, a device range error occurs.)
101	GD11	
:	:	
114	GD24	
115	GD25	

POINT
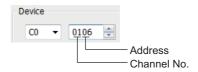

Device settings of OMRON temperature controller

(1) When setting the (S)
Make settings for status by a channel number and a bit position.

— Bit position
— Channel No.

(2) When setting variable area (0), variable area (1) and variable area (2)
Make setting for variable areas by a channel number and address.

— Address
— Channel No.

5.6.1 OMRON temperature controller (OMRON THERMAC/INPANEL NEO)

	Device name	Setting range	Device No. representation
Bit device	Status (S)[1]	S0000 to S0031 S0100 to S0131	Decimal
Word device	Operation command (A)[2]	A0000 to A000C	Hexadecimal
Double word device	Variable area 0 (C0)[1][3]	C00000 to C00006 C00100 to C00106	Decimal + Hexadecimal
	Variable area 1 (C1)[3]	C10000 to C1001C C10100 to C1011C	
	Variable area 3 (C3)[3]	C30000 to C3003E C30100 to C3013E	

*1 Only reading is possible.
*2 Only writing is possible.
    Numerical input cannot be used.
    When writing, use [Word Set] of a data set switch.
*3 Only 32-bit (2-word) designation is allowed.

5.7 Precautions

■ **Station number setting of the temperature controller system**

Make sure to establish temperature controller system with No.1 station.

■ **GOT clock control**

Since the temperature controller does not have a clock function, the settings of [time adjusting] or [Broadcast] by GOT clock control will be disabled.

■ **Disconnecting some of multiple connected equipment**

The GOT can disconnect some of multiple connected equipment by setting GOT internal device.For example, the faulty station where a communication timeout error occurs can be disconnected from connected equipment.
For details of GOT internal device setting, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

(2) Precaution when preparing a cable

    (a) Cable length
         The length of the RS-232 cable must be within
         15m.

    (b) GOT side connector
         For the GOT side connector, refer to the following.
         ☞ 1.4.1 GOT connector specifications

    (c) KEYENCE PLC side connector
         Use the connector compatible with the KEYENCE
         PLC side module.
         For details, refer to the KEYENCE PLC user's
         manual.

■ RS-422 cable

(1) Connection diagram

    (a) RS-422 connection diagram 1)

    (b) RS-422 connection diagram 2)

*1   The signals RSA, RSB, CSA, and CSB are not provided for
GT03P 21 04P ET/R4.
Return connection is not required.

(2) Precautions when preparing a cable

    (a) Cable length
         The length of the RS-422 cable must be 500m or
         less

    (b) GOT side connector
         For the GOT side connector, refer to the following.
         ☞ 1.4.1 GOT connector specifications

    (c) KEYENCE PLC side connector
         Use the connector compatible with the KEYENCE
         PLC side module.
         For details, refer to the KEYENCE PLC user's
         manual.

(3) Connecting terminating resistors
   (a) GOT side
      When connecting a KEYENCE PLC to the GOT, a terminating resistor must be connected to the GOT.
      • For GT27, GT25, GT23
       Set the terminating resistor setting switch of the GOT main unit to "Disable".
      • For GT21
       Set the terminating resistor selector to "330Ω".
      For the procedure to set the terminating resistor, refer to the following.
      ☞ 1.4.3 Terminating resistors of GOT
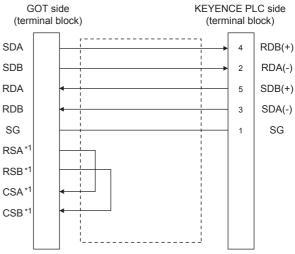

■ RS-485 cable

(1) Connection diagram

   (a) RS-485 connection diagram 1)

   (b) RS-485 connection diagram 2)

*1 The signals RSA, RSB, CSA, and CSB are not provided for GT21 03P 04P ET/IR4. Return connection is not required.

(2) Precautions when preparing a cable
   (a) Cable length
      The length of the RS-485 cable must be 500m or less
   (b) GOT side connector
      For the GOT side connector, refer to the following.
      ☞ 1.4.1 GOT connector specifications
   (c) KEYENCE PLC side connector
      Use the connector compatible with the KEYENCE PLC side module.
      For details, refer to the KEYENCE PLC user's manual.

(3) Connecting terminating resistors

(a) GOT
  • For GT27, GT25, GT23
    Set the terminating resistor setting switch of the
    GOT main unit to "Enable".
  • For GT21
    Set the terminating resistor selector to "330Ω".
    For the procedure to set the terminating resistor,
    refer to the following.

  ☞ 1.4.3 Terminating resistors of GOT

(b) KEYENCE PLC
  Connect the terminating resistor on the KEYENCE
  PLC side when connecting a GOT to a KEYENCE
  PLC.
  ☞ 6.2.7 PLC Side Setting

6.2.6 GOT Side Settings

■ Setting communication interface
(Communication settings)
Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: KEYENCE
   • Controller Type: KEYENCE KV-700/1000/3000/ 5000
   • I/F: Interface to be used
   • Driver: KEYENCE KV-700/1000

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ ■ Communication detail settings

   Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

■ Communication detail settings
Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	1 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Host Address	0
Delay Time(ms)	0
Station No. Selection	No

Item	Contents	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address	Specify the host address (station No. of the PLC to which the GOT is connected) in the network of the GOT. (Default: 0)	0 to 9
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300ms
Station No. Selection	Specify whether to use the station No. during communication. (Default: None)	Yes or No

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

6.2.7　PLC Side Setting

POINT

KEYENCE PLC

For details of KEYENCE PLC, refer to the following manual.

☞　KEYENCE PLC user's Manual

Model name		Reference
PLC CPU	KV-3000	6 - 19
	KV-1000	6 - 19
	KV-700	6 - 19
Multi-communication unit	KV-L20R	6 - 19
	KV-L20	
	KV-L20V	

■ Connecting KV-3000,KV-1000

Setting items	Set value
Transmission Speed	9600 to 115200 bps[*1]
Data bit	8bits
Parity bit	Even
Stop bit	1bit

[*1]　There is no transmission speed setting on the PLC side. The transmission speed of the PLC side is automatically adjusted to that of the GOT side.

■ Connecting to KV-700

Setting items	Set value
Transmission Speed	9600bps
Data bit	8bits
Parity bit	Even
Stop bit	1bit

■ Connecting to KV-L20R, KV-L20,.KV-L20V

(1) Communication settings

Setting items	Set value
Communication mode	KV mode (Upper link)
Transmission speed[*1*2]	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data bit	8bits
Parity bit	Even
Stop bit	1bit
Station No.[*3]	0 to 9

[*1]　Only transmission speeds available on the GOT side are shown.

[*2]　The transmission speed setting must be consistent with that of the GOT side.
For the transmission speed setting on the GOT side, refer to the following.

☞　■ Setting communication interface (Communication settings)

[*3]　Set the station No. according to the host address on the GOT side.
For the Host Address setting on the GOT side, refer to the following.
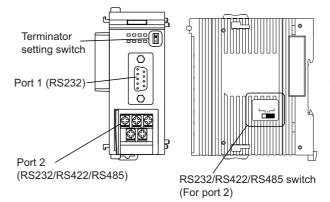

☞　■ Setting communication interface (Communication settings)
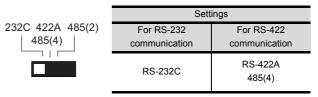

(2) Setting DIP switches
Set the DIP switches.

(a)　When using KV-L20R or KV-L20

Terminator setting switch

Port 1 (RS232)

Port 2 (RS232/RS422/RS485)

RS232/RS422/RS485 switch (For port 2)

• RS232/RS422/RS485 switch (For port 2)
(For KV-L20R)

	Settings	
	For RS-232 communication	For RS-422 communication
232C 422A 485(2) / 485(4)	RS-232C	RS-422A 485(4)

(For KV-L20)
	Settings	
	For RS-232 communication	For RS-422 communication
232C 422A VT	RS-232C	RS-422A

• Terminator setting switch
Set when carrying out RS-422 communication.

	Settings	
	When multi-communication unit is a terminal	When multi-communication unit is not a terminal
ON / OFF	ON	OFF

(b) When using KV-L20

Terminator
setting switch

Port 1 (RS232)

Port 2
(RS232/RS422/RS485)

• Terminator setting switch
  Set when carrying out RS-422 communication.

	Settings	
ON	When multi-communication unit is a terminal	When multi-communication unit is not a terminal
OFF	ON	OFF

6.3 Ethernet Connection

6.3.1 Connecting to KV-700/1000/3000/5000/5500

CPU	Ethernet module		GOT		Communication driver

Connection cable

Ethernet (KEYENCE), Gateway

PLC		Connection cable		GOT		Number of connectable equipment
Series	Ethernet module[*3]	Cable model	Maximum segment length[*2]	Option device	Model[*3]	
KV-5000	-	Twisted pair cable • 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5 • 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e	100m	- (Built into GOT)	GT27 GT25 GT23 GT21 04R GT21 03P 04P ET/R4 GS	When PLC:GOT is N:1 The following shows the number of PLCs for 1 GOT <For GT27, GT25> TCP: 128 or less UDP: 128 or less <For GT21> TCP: 4 or less UDP: 4 or less When PLC:GOT is 1:N The following shows the number of GOTs for 1 PLC TCP: 15 or less UDP: 1 or less
KV-700 KV-1000 KV-3000 KV-5000 KV-5500	KV-LE20V KV-LE21V					

*1   The destination connected with the twisted pair cable varies with the configuration of the applicable Ethernet network system.
Connect to the Ethernet module, hub, transceiver or other system equipment corresponding to the applicable Ethernet network system.
Use cables, connectors, and hubs that meet the IEEE802.3 10BASE-T/100BASE-TX standards.

*2   A length between a hub and a node.
The maximum distance differs depending on the Ethernet device to be used.
The following shows the number of the connectable nodes when a repeater hub is used.
• 10BASE-T: Max. 4 nodes for a cascade connection (500m)
• 100BASE-TX: Max. 2 nodes for a cascade connection (205m)
When switching hubs are used, the cascade connection between the switching hubs has no logical limit for the number of cascades.
For the limit, contact the switching hub manufacturer.

*3   Product manufactured by KEYENCE CORPORATION. For details of the product, contact KEYENCE CORPORATION.

6

CONNECTION TO KEYENCE PLC

6.3.2 GOT side settings

■ Setting communication interface (Communication settings)

Set the channel of the connected equipment.

2.

3.

4.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   - Manufacturer: KEYENCE
   - Controller Type: KEYENCE KV-700/1000/3000/5000
   - I/F: Interface to be used
   - Driver: Ethernet(KEYENCE), Gateway

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 6.3.2 ■ Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

■ Communication detail settings

Make the settings according to the usage environment.
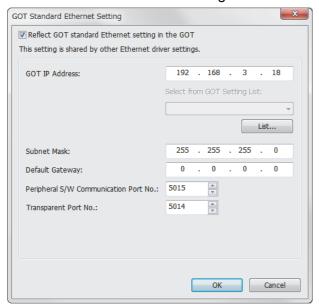

Property	Value
GOT Net No.	1
GOT Station	1
GOT Standard Ethernet Setting	192.168.3.18
GOT Communication Port No.	5025
Retry(Times)	3
Startup Time(Sec)	3
Timeout Time(Sec)	3
Delay Time(ms)	0

Item	Description	Range
GOT Net No.	Set the network No. of the GOT. (Default: 1)	1 to 239
GOT Station[1]	Set the station No. of the GOT. (Default: 1)	1 to 254
GOT Standard Ethernet Setting	Set the GOT IP address, subnet mask, default gateway, peripheral S/W communication port No., transparent port No.	☞ ■GOT Standard Ethernet Setting
GOT Communication Port No.	Set the GOT port No. for the connection with the Ethernet module. (Default: 5025)	1024 to 5010, 5014 to 65534 (Except for 5011, 5012, 5013, and 49153)
Retry	Set the number of retries to be performed when a communication timeout occurs. When receiving no response after retries, the communication times out. (Default: 3times)	0 to 5times
Startup Time	Specify the time period from the GOT startup until GOT starts the communication with the PLC CPU. (Default: 3sec)	3 to 255sec
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 90sec
Delay Time	Set the delay time for reducing the load of the network/destination PLC. (Default: 0ms)	0 to 10000 (×10ms)

[1] Each of [GOT Station] set in the communication detail setting and [Station] set in the Ethernet setting must be set to different station numbers.

☞ ■ Ethernet setting

6. CONNECTION TO KEYENCE PLC
6.3 Ethernet Connection

■ GOT Standard Ethernet Setting

Item	Description	Range
GOT IP Address	Set the IP address of the GOT. (Default: 192.168.3.18)	0.0.0.0 to 255.255.255.255
Subnet Mask[*1]	Set the subnet mask for the sub network. (Only for connection via router) If the sub network is not used, the default value is set. (Default: 255.255.255.0)	0.0.0.0 to 255.255.255.255
Default Gateway	Set the router address of the default gateway where the GOT is connected. (Only for connection via router) (Default: 0.0.0.0)	0.0.0.0 to 255.255.255.255
Peripheral S/W Communication Port No.	Set the GOT port No. for the communication with the peripheral S/W. (Default: 5015)	1024 to 5010, 5014 to 65534 (Except for 5011, 5012, 5013 and 49153)
Transparent Port No.	Set the GOT port No. for the transparent function. (Default: 5014)	1024 to 65534 (Except for 5011 to 5013 and 49153 to 49170)

■ Ethernet setting

Item	Description	Set value
Host	The host is displayed. (The host is indicated with an asterisk (*).)	-
N/W No.	Set the network No. of the connected Ethernet module. (Default: blank)	1 to 239
Station[*1]	Set the station No. of the connected Ethernet module. (Default: blank)	1 to 254
Type	KEYENCE (fixed)	KEYENCE (fixed)
IP Address	Set the IP address of the connected Ethernet module. (Default: 192.168.0.10)	PLC side IP address
Port No.	Set the port No. of the connected Ethernet module. (Default: 8501)	PLC side port No.
Communication	UDP, TCP (Default: UDP)	Adjust the settings with the PLC settings.

*1   Each of [GOT Station] set in the communication detail setting and [Station] set in the Ethernet setting must be set to different station numbers.

☞ ■ Communication detail settings

POINT

(1)   Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication setting] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞   GOT2000 Series User's Manual (Utility)

(2)   Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

Ethernet Setting

	Host	Net No.	Station
1	*	1	1
2		1	2
3		1	3
4		1	4

Only [1] to [4] can be used.

■ IP Filter Setting

IP Filter Setting

☑ Reflect IP filter setting in the GOT

This setting is shared by GOT standard Ethernet setting and GOT wireless LAN I/F setting.

☐ Use IP filter

Access from IP address below: Penetrate ▾

	Range	Start IP Address	End IP Address	IP Address to Exclude
1	☑			

OK   Cancel

To improve security, the GOT 2000 series supports the IP Filter Setting.

For details on the IP Filter Setting, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

6.3.3   PLC side setting

■ KV-LE21V/KV-LE21V setting

Set the IP address and port No. by the unit editor of KV STUDIO.

Item	Description	Range
Communication mode	Ethernet	-
IP address[1]	Set the IP address.	0.0.0.0 to 255.255.255.255
Port No.[1] (Host link)	Set the port No.	256 to 65534

[1]   Adjust the settings with the Ethernet settings of the GOT side.

☞ ■ Ethernet setting

6.4 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information	Displays the device type and its setting range selected in [Device].
Network	Set the station number of the controller to be monitored.
	Host	Select this item for monitoring the host controller.
	Other	Select this item for monitoring other controllers. After selecting, set the station number of the controller to be monitored. NWNo.: Set the network No. Station No.: Set the station No.

POINT

Device settings of KEYENCE PLC

(1) Setting setting procedure for relays (...), internal auxiliary relays (MR), latch relays (LR) and control relays(CR).
Make settings for status by a channel number and a bit position.

6.4.1 KV-700/1000/3000/5000

	Device name	Setting range	Device No. representation
Bit device	Relay (...)	..00000 to ..99915	Decimal
	Internal auxiliary relay (MR)	MR00000 to MR99915	
	Latch relay (LR)	LR00000 to LR99915	
	Control relay (CR)	CR0000 to CR3915	
	Link relay (B)[2]	B0000 to B3FFF	Hexadecimal
	Work relay (VB)[2]	VB0000 to VB3FFF	
	Timer (Contact) (T)[1][2]	T0000 to T3999	Decimal
	Counter (Contact) (C)[1][2]	C0000 to C3999	
	High-speed counter comparator (Contact) (CTC)[2][3][6]	CTC0 to CTC3	
	The bit specification of the word device (except Control memory, Temporary data memory, Work memory, Index register)	Setting range of each word device	-
Word device	Data memory (DM)	DM00000 to DM65534	Decimal
	Extension data memory (EM)	EM00000 to EM65534	
	Extension data memory 2 (FM)	FM00000 to FM32767	
	File register (ZF)	ZF000000 to ZF032767 ZF032768 to ZF065535 ZF065536 to ZF098303 ZF098304 to ZF131071	
	Link register (W)	W0000 to W3FFF	Hexadecimal
	Control memory (CM)	CM00000 to CM11998	Decimal
	Temporary data memory (TM)	TM000 to TM511	
	Work memory (VM)	VM00000 to VM59999	
	Index register (Z)[7]	Z1 to Z12	
	The word specification of the bit device (except Timer (Contact), Counter (Contact), High-speed counter comparator (Contact))	Setting range of each bit device	-
Double word device	Timer (Current value) (TC)[2][4]	TC0000 to TC3999	-
	Timer (Set value) (TS)[2][4]	TS0000 to TS3999	
	Counter (Current value) (CC)[2][4]	CC0000 to CC3999	
	Counter (Set value) (CS)[2][4]	CS0000 to CS3999	
	High-speed counter (Current value) (CTH)[2][4]	CTH0 to CTH1	
	High-speed counter comparator (Set value) (CTC)[2][4]	CTC0 to CTC3	
	Index register (DZ)	DZ01 to DZ12	
	Digital trimmer (TRM)[4][5]	TRM0 to TRM7	

*1　Monitoring or writing is not possible in the continuous device designation mode.
*2　Monitoring by GOT is possible only when a device is used in the sequence program.
*3　When writing, only the reset of the contact is possible.
*4　Only 32-bit (2-word) designation is allowed.
*5　Only reading is possible.
*6　Monitoring or writing to continuous devices is not possible.
*7　With KV-3000 and KV-5000, Z devices cannot be specified as 32-bit (2 words) data. Use DZ devices.

				GT15-RS4-9S	GT 27 GT 25	

■ When connecting to multiple PLCs

Communication driver

KOYO KOSTAC/DL

PLC		Connection cable		GOT		Number of connectable equipment
Model name	Communication Type	Cable model Connection diagram number	Max. distance	Option device	Model	
PZ (general communication port 2)	RS-422	(User preparing) RS-422 connection diagram 8)	1000m	- (Built into GOT)	GT 27 GT 25 GT 23	90 PLCs for 1 GOT*1
				GT15-RS4-9S	GT 27 GT 25	

*1   When the number of links exceeds 30, use a transmission line conversion unit D-01CV per 30 links.
        For details, refer to the following manual.

☞   KOYO EI PLC user's Manual

7.3 Connection Diagram

The following diagram shows the connection between the GOT and the PLC.

7.3.1 RS-232 cable
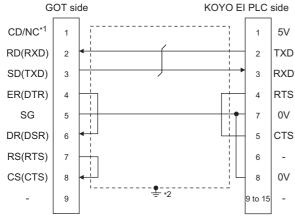

■ Connection diagram

(1) RS-232 connection diagram 1)

GOT side		KOYO EI PLC side	
CD/NC*1	1	1	-
RD(RXD)	2	2	TXD
SD(TXD)	3	3	RXD
ER(DTR)	4	4	RTS
SG	5	7	0V
DR(DSR)	6	5	CTS
RS(RTS)	7	6	-*3
CS(CTS)	8	8 to 25	-
-	9		

*1 GT27: CD, GT23:NC
*2 Connect FG grounding to the appropriate part of a cable shield line.
*3 For U-01DM and D2-DCM, the signal name will be +5V.

(2) RS-232 connection diagram 2)

GOT side		KOYO EI PLC side	
CD/NC*1	1	1	5V
RD(RXD)	2	2	TXD
SD(TXD)	3	3	RXD
ER(DTR)	4	4	RTS
SG	5	7	0V
DR(DSR)	6	5	CTS
RS(RTS)	7	6	-
CS(CTS)	8	8	0V
-	9	9 to 15	-

*1 GT27: CD, GT23:NC
*2 Connect FG grounding to the appropriate part of a cable shield line.

■ Precautions when preparing a cable

(3) Cable length
The length of the RS-232 cable must be 15m or less.

(4) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(5) KOYO EI PLC side connector
Use the connector compatible with the KOYO EI PLC side.
For details, refer to the KOYO EI PLC user's manual.
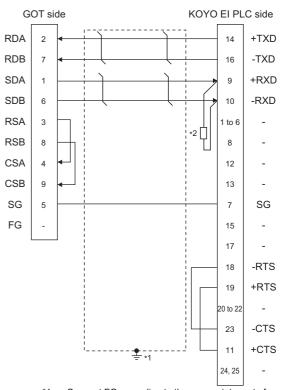

7.3.2 RS-422 cable

*1   Connect FG grounding to the appropriate part of a cable shield line.
*2   Connect a terminating resistor (approximately 100 to 500 Ω) to the PLC to be a terminal.
      When the number of links exceeds 30, use a transmission line conversion unit D-01CV per 30 links.
      For details, refer to the following manual.
      ☞ KOYO EI PLC user's Manual

■ Precautions when preparing a cable

(1) Cable length

The maximum length of the RS-422 cable differs according to the specifications of the KOYO EI PLC side module.

For details, refer to the following manual.

☞ KOYO EI PLC user's Manual

(2) GOT side connector

For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(3) KOYO EI PLC side connector

Use the connector compatible with the KOYO EI PLC side.

For details, refer to the KOYO EI PLC user's manual.

■ Connecting terminating resistors

(1) GOT side

Set the terminating resistor setting switch of the GOT main unit to "Disable".

For the procedure to set the terminating resistor, refer to the following.

☞ 1.4.3 Terminating resistors of GOT
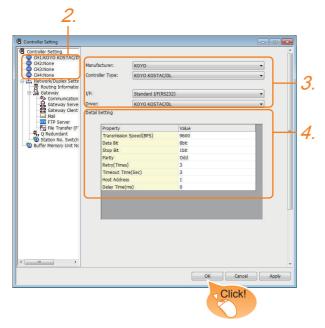

(2) KOYO EI PLC

To connect a KOYO EI PLC to a GOT, a terminating resistor must be set to the KOYO EI PLC.

☞ KOYO EI PLC user's Manual

7.4 GOT Side Settings

7.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   - Manufacturer: KOYO
   - Controller Type: KOYO KOSTAC/DL
   - I/F: Interface to be used
   - Driver: KOYO KOSTAC/DL

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 7.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

7.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	1 bit
Parity	Odd
Retry(Times)	3
Timeout Time(Sec)	3
Host Address	1
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Odd)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 3times)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 50sec
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300ms
Host Address	Specify the host address (station No. of the GOT to which the PLC is connected) in the connected network. (Default: 1)	1 to 90

POINT

(1) Communication interface setting by the Utility
   The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
   For details on the Utility, refer to the following manual.
   ☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
   When settings are made by GT Designer3 or the Utility, the latest setting is effective.

7. CONNECTION TO KOYO EI PLC
7.4 GOT Side Settings

7.5 PLC Side Setting

KOYO EI PLC

For details of KOYO EI PLCs, refer to the following manuals.

☞ KOYO EI PLC user's Manual

■ PLC CPU

Model name		Refer to
KOSTAC SU Series	SU-5E/6B	7.5.1
	SU-5M/6M	7.5.2
DirectLOGIC 05 Series DirectLOGIC 06 Series		7.5.3
DirectLOGIC 205 Series		7.5.4
PZ series		7.5.5

■ Data Communications Module

Model name		Refer to
Host Link Module	U-01DM	7.5.6
Data Communications Module	D0-DCM	7.5.7
	D2-DCM	7.5.8

7.5.1 Connecting to SU-5E/6B
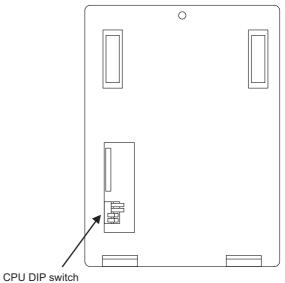

■ Communication settings

Make the following settings using the programmer system parameter setting.

Item	Set value
Station No.	1 to 90
Transmission mode	HEX
Parity	NONE, ODD
Data bit	8 bit (Fixation)
Stop bit	1 bit (Fixation)

■ Setting DIP switches

Set the transmission speed using the CPU DIP switch.

CPU DIP switch

Item	Set value	Switch No.	
		3	4
Transmission speed[1]	9600bps	ON	OFF
	19200bps	ON	ON

[1] Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 7.4.1 Setting communication interface (Communication settings)

7.5.2 Connecting to SU-5M/6M

■ Communication settings

Make the following settings using the programmer system parameter setting.

Item	Set value
Protocol	CCM
Response delay time	0ms
Timeout Time	800ms/960ms/1200ms/1600ms/4000ms/ 8000ms/16000ms/40000ms
Station No.	1 to 90
Transmission mode	HEX
Stop bit	1bit, 2bits
Data bit	8bits (Fixed)
Parity	NONE, ODD, EVEN
Transmission speed[*1]	9600bps, 19200bps, 38400bps

*1   Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 7.4.1 Setting communication interface (Communication settings)

7.5.3 Connecting to DirectLOGIC 05 series or DirectLOGIC 06 series

■ Communication settings

Make the following settings using the programmer system parameter setting.

Item	Set value
Protocol	CCM NET (DirectNET)
Timeout	780ms or more
RTS On Delay Time	0ms[*1]
RTS Off Delay Time	0ms[*1]
Station No.	1 to 90
Transmission speed[*2]	9600bps, 19200bps, 38400bps
Stop bit	1bit, 2bits
Parity	NONE, ODD, EVEN
Communication format	HEX

*1   To use a PLC with multidrop, set the "RTS on delay time" to 5ms or more and the "RTS off delay time" to 2ms or more.
*2   Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 7.4.1 Setting communication interface (Communication settings)

7.5.4 Connecting to DirectLOGIC 205 series

■ Communication settings

Make the following settings using the programmer system parameter setting.

Item	Set value
Protocol	CCM NET (DirectNET)
Station No.	1 to 90
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Data bit	8bits (fixed)
Stop bit	1bit (fixed)
Parity	NONE, ODD
Self-diagnostic mode	OFF
Response delay time	0ms
Peer to Peer	OFF
Master/Slave	Slave
Timeout	Enable
Transmission mode	HEX
MODBUS	OFF

*1   Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 7.4.1 Setting communication interface (Communication settings)

7.5.5 Connecting to PZ Series

■ Communication settings

Make the following settings using the programmer system parameter setting.

Item	Set value
Protocol	CCM NET
Timeout	800ms/960ms/1200ms/1600ms/4000ms/ 8000ms/16000ms/40000ms
Response delay time	0ms
Station No.	1 to 90
Communication format	HEX
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Stop bit	1bit
Parity	NONE, ODD
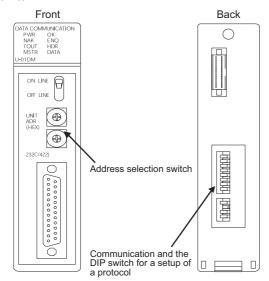

*1   Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 7.4.1 Setting communication interface (Communication settings)
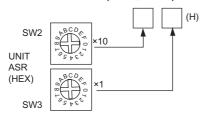

7.5.6 Connecting to U-01DM

■ Setting switches

Make the communication settings using each setting switch.

Front / Back

Address selection switch

Communication and the DIP switch for a setup of a protocol
(1) Address selection switch(SW2, SW3)

SW2
UNIT ASR (HEX)
SW3

Switch No.	Settings	Setting details
SW2	Code higher rank (10^1figures)	01 to 5A
SW3	Code low rank (10^0figures)	
(2) Communication and the DIP switch for a setup of a protocol(SW4)

SW4

Setting item	Set value	Switch No.							
		1	2	3	4	5	6	7	8
Transmission speed[1]	9600bps	OFF	ON	ON					
	19200bps	ON	ON	ON					
	38400bps	OFF	OFF	OFF					
Parity	ODD				ON				
	NONE				OFF				
Self-diagnostic	OFF					OFF			
Response delay time	0ms						OFF	OFF	OFF

*1 Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

(3) Communication and the DIP switch for a setup of a protocol(SW5)

SW5

Item	Set value	Switch No.			
		1	2	3	4
Peer to Peer	OFF	OFF			
M/S	Slave		OFF		
TOUT existence	Enable			OFF	
ASCII/HEX	HEX				OFF

7.5.7   Connecting to D0-DCM

■ Communication settings
Write the following communication settings to the specified register using the programmer.For details of the register, refer to the following manual.

☞ KOYO EI PLC user's Manual

Item	Set value
Transmission mode	HEX
Protocol	DirectNet
Station No.	1 to 90
Transmission speed[*1]	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Parity	NONE, ODD, EVEN (Only communication port 2)
RTS On Delay Time (Only communication port 2)	0ms
RTS Off Delay Time (Only communication port 2)	0ms
Timeout (Only communication port 2)	800ms/960ms/1200ms/1600ms/4000ms/ 8000ms/16000ms/40000ms
485 mode selection (Only communication port 2)	RS232, RS422/485 4 line type
Data bit (Only communication port 2)	8bits, 7bits
Stop bit (Only communication port 2)	1bit, 2bits
The timeout between characters (Only communication port 2)	0 to 9999ms
The completion of a setting	Default use,A preset value is effective
Reset timeout	Invalid,Effective

*1   Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 7.4.1 Setting communication interface (Communication settings)

7.5.8   Connecting to D2-DCM

■ Communication settings

Make the following settings using the programmer.

Item	Set value
Station No.	1 to 90
Transmission speed[*1]	9600bps, 19200bps, 38400bps
Data bit	8bits (fixed)
Stop bit	1bit (fixed)
Parity	NONE, ODD
Self-diagnostic mode	OFF
Response delay time	0ms
Peer to Peer	OFF
Master/Slave	Slave
Timeout	Enable
Transmission mode	HEX
MODBUS	OFF

*1   Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.
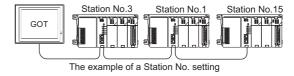

☞ 7.4.1 Setting communication interface (Communication settings)

7.5.9   Station No. settings

Set each station number so that no station number overlaps.
The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

The example of a Station No. setting

(1) Direct specification
Specify the station No. of the PLC to be changed when setting device.

Specification range
1 to 90

7.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item		Description
Device		Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information		Displays the device type and setting range which are selected in [Device].
Network		Set the monitor target of the set device.
	Station No.	Select this item when monitoring the PLC of the specified station No.

7.6.1 KOYO EI PLC (KOYO KOSTAC/DL)

	Device name	Setting range	Device No. represent ation
Bit device	Input (I)[*5]	I0 to I1777	
	Output (Q)[*5]	Q0 to Q1777	
	Link relay (GI)	GI0 to GI3777	
	Link output (GQ)	GQ0 to GQ3777	
	Internal relay (M)	M0 to M3777	
	Stage (S)	S0 to S1777	
	Timer (T)	T0 to T377	
	Counter (C)	C0 to C377	
	Special relay (SP)[*1]	SP0 to SP777	
Word device	Timer (current value) (R)	R0 to R377	Octal
	Preparatory register (R)[*5]	R400 to R677	
	Special register 1 (R)[*1*5]	R700 to R777	
	Timer (current value) (R)[*3]	R1000 to R1377	
	Data register 1 (R)[*2*5]	R1400 to R7377	
	Special register 2 (R)[*1*4*5]	R7400 to R7777	
	Data register 2 (R)[*5]	R10000 to R36777	
	Special register 3 (R)[*1*5]	R37000 to R37777	
	Link relay (R)	R40000 to R40177	
	Link output (R)	R40200 to R40377	
	Input (R)	R40400 to R40477	
	Output (R)	R40500 to R40577	
	Internal relay (R)	R40600 to R40777	
	Stage (R)	R41000 to R41077	
	Timer (R)	R41100 to R41117	
	Counter (R)	R41140 to R41157	
	Special relay (R)	R41200 to R41237	

*1 Read-only device for KOSTAC SU series
*2 The GOT cannot write data to R7377 for the SU-5M and SU-6M.
*3 For Direct Logic 05 series and Direct Logic 06 series, devices from R1200 to R1377 are used as V-memory 2.
*4 The GOT cannot write data to devices from R7766 to R7774 (calendar area).
*5 The device names differ according to the series. The following shows the device names for each series.

KOSTAC SU PZ	Direct Logic 05 Direct Logic 06	Direct Logic 205
Input	Input relay	Input
Output	Output relay	Output
Preparatory register	V-memory 1	Data register 1
Special register 1	System parameter 1	System parameter 1
Data register 1	V-memory 2	Data register 2
Special register 2	System parameter 2	System parameter 2
Data register 2	V-memory 3	Data register 3
Special register 3	System parameter 4	System parameter 4

7.7　Precautions

■ GOT clock control

The GOT clock function is available only for the PLC
with a calendar function. Note: Although the "time
adjusting" and "time broadcast" functions can be
selected on the GOT, the "time broadcast" function is
not available. Do not select the "time broadcast"
function. If both of the functions are selected, not only
the "time broadcast" function but also the "time
adjusting" function will be disabled.

8

CONNECTION TO JTEKT PLC

8. CONNECTION TO JTEKT PLC

8.1 Connectable Model List

The following table shows the connectable models.
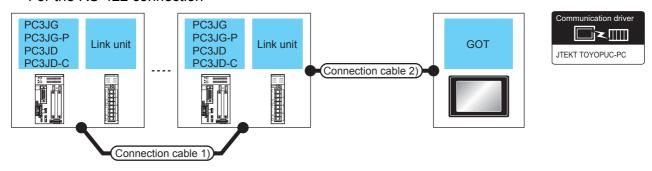

Model name	Model type	Clock	Communication Type	Connectable GOT	Refer to
PC3JG-P	TIC-6088				
PC3JG	TIC-6125		RS-232	GT27 GT25 GT23	☞ 8.2.1
PC3JD	TIC-5642	○	RS-422		
PC3JD-C	TIC-6029				
PC3J[1]	TIC-5339	○	RS-232	GT27 GT25 GT23	☞ 8.2.2
PC3JL	TIC-5783		RS-422		
PC2J	THC-2764				
PC2JS	THC-2994	○	RS-232	GT27 GT25 GT23	☞ 8.2.3
PC2JR	THC-5053		RS-422		
PC2JC	THC-5070				
PC2J16P	THC-5169	○	RS-232	GT27 GT25 GT23	☞ 8.2.4
PC2J16PR	THC-5173		RS-422		

    *1   Use PC3J of the version 2.1 or later.

8.2 System Configuration

8.2.1 Connecting to PC3JG, PC3JG-P, PC3JD or PC3JD-C

■ For the RS-422 connection

PLC			Connection cable 1)	Connection cable 2)	Max. distance	GOT		Number of connectable equipment

*1   Terminating resistors should not be provided for a PLC and an RS-232/RS-422 interface converter which will be terminals.
*2   Set the terminating resistor of GOT side which will be a terminal.

☞ ■ Connecting terminating resistors

*3   Connect FG grounding to the appropriate part of a cable shield line.

■ Precautions when preparing a cable

(8) Cable length
The maximum length of the RS-422 cable must be 500m or less.

(9) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(10)JTEKT PLC side connector
Use the connector compatible with the JTEKT PLC side module.
For details, refer to the JTEKT PLC user's manual.

■ Connecting terminating resistors

(1) GOT side
Set the terminating resistor setting switch of the GOT main unit to "Disable".
For the procedure to set the terminating resistor, refer to the following.
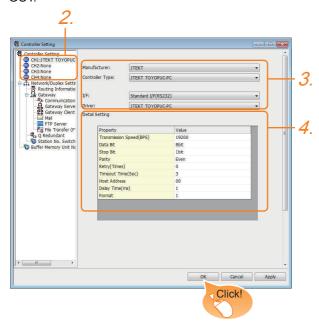

☞ 1.4.3 Terminating resistors of GOT

8.4 GOT Side Settings

8.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: JTEKT
   • Controller Type: JTEKT TOYOPUC-PC
   • I/F: Interface to be used
   • Driver: JTEKT TOYOPUC-PC

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 8.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting]. For details, refer to the following.

☞ 1.1.2 I/F communication setting

8.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	19200
Data Bit	8 bit
Stop Bit	1 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Host Address	00
Delay Time(ms)	1
Format	1

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 19200bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	3 to 30sec
Host Address	Specify the host address (station No. of the GOT to which the PLC is connected) in the connected network. (Default: 00)	00 to 37 (Octal)
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0)	0 to 300ms
Format	Select the communication format. (Default: 1) format 1: PC3J extended function incompliant format 2: PC3J extended function compliant	1/2

POINT

(1) Format setting

The compatible format of PLC differs depending on model.

Model name	Compatible format
PC2J, PC2JS, PC2JR, PC2JC, PC2J16P, PC2J16PR	Format 1 only
PC3JG, PC3JG-P, PC3JD, PC3JD-C, PC3J, PC3JL	Format 1 or Format 2

For details of PC3J extended function, refer to the following manual.

☞ JTEKT PLC user's manual

(2) Communication interface setting by the Utility

The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.

For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(3) Precedence in communication settings

When settings are made by GT Designer3 or the Utility, the latest setting is effective.

CONNECTION TO JTEKT PLC

8.5 PLC Side Setting

JTEKT PLC

For details of JTEKT PLCs, refer to the following manuals.

☞ JTEKT PLC user's manual

Model name		Refer to
PLC CPU	PC3JG, PC3JG-P, PC3JD, PC3JD-C, PC3J, PC3JL, PC2J, PC2JS, PC2JR	8.5.1
	PC2JC	8.5.2
	PC2J16P, PC2J16RR	8.5.3
RS-232/RS-422 interface converter	RS-232/RS-422 interface converter	8.5.4
Link unit	PC/CMP-LINK	8.5.5
	2PORT-LINK	
	PC/CMP2-LINK	

8.5.1 Connecting to PC3JG, PC3JD, PC3JD-C, PC3JG-P, PC3J, PC3JL, PC2J, PC2JS or PC2JR

■ Communication settings

Make the communication settings using the PLC peripheral device (PCwin).

Item	Set value
Transmission speed[1]	9600bps, 19200bps, 38400bps
Data bit[1]	8bits, 7bits
Parity bit	Even (fixed)
Stop bit[1]	1bit, 2bits
Station No.[2]	0 to 37 (Octal)
2-wire/4-wire type[3]	2-wire type or 4-wire type

[1] Adjust the settings with GOT settings.
[2] Avoid duplication of the station No. with any of the other units.
[3] Make the settings referring to the following connection diagram.

☞ 8.3.2 RS-422 cable

8.5.2 Connecting to PC2JC

■ Communication settings

Make the communication settings using each setting switch.
For the detail settings, refer to the following manual.

☞ JTEKT PLC user's manual

Item	Set value
Transmission speed[1]	9600bps, 19200bps
Data bit[1]	8bits, 7bits
Stop bit[1]	1bit, 2bits
Station No.[1]	0 to 37 (Octal)

[1] Adjust the settings with GOT settings.

■ Settings by switch
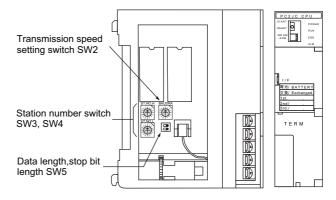

Make the communication settings using each setting switch.

(1) Setting of the station No.
Set the station No. between 00 and 37 (Octal).

Switch name	Station number setting
SW3	Upper digit
SW4	Lower digit

(2) Transmission speed settings

Switch name	Switch position	Transmission speed (bps)
SW2	1	19200
	2	9600

(3) Settings of data length and stop bit length

Switch name	Setting item	Set value	Switch No. 2	1
SW5	Data bit	8bits	OFF	
		7bits	ON	
	Stop bit length	2bits		OFF
		1bit		ON

8.5.3 Connecting to PC2J16P or PC2J16PR

■ Communication settings

Make the communication settings using each setting switch.

For the detail settings, refer to the following manual.

☞ JTEKT PLC user's manual
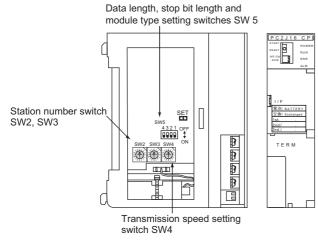

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
Data bit[*1]	8bits, 7bits
Stop bit[*1]	1bit, 2bits
Station No.[*1]	0 to 37 (Octal)
Selection of module type	Computer link

    [*1]   Adjust the settings with GOT settings.

■ Settings by switch

Make the communication settings using each setting switch.

Data length, stop bit length and module type setting switches SW 5

Station number switch SW2, SW3

Transmission speed setting switch SW4

(1) Setting of the station No.

Set the station No. between 00 and 37 (Octal).

Switch name	Station number setting
SW2	Upper digit
SW3	Lower digit

(2) Transmission speed settings

Switch name	Switch position	Transmission speed (bps)
SW4	1	19200
	2	9600

(3) Settings of data length, stop bit length and module type

Switch name	Setting item	Set value	Switch No. 4	Switch No. 3	Switch No. 2
SW5	Data bit	8bits	OFF		
		7bits	ON		
	Stop bit length	2bits		OFF	
		1bit		ON	
	Module type	Computer link			OFF

8.5.4 RS-232/RS-422 interface converter setting

■ Communication settings

Make the communication settings by the setting switch of the RS-232/RS-422 interface converter.
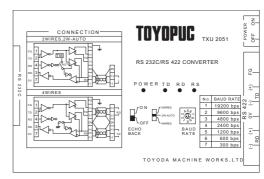

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
2-wire/4-wire type[*2]	2-wire type or 4-wire type
Echo back	OFF

    [*1]   Adjust the settings with GOT settings.
    [*2]   Set referring to the RS-422 connection diagram.For details, refer to the following.

        ☞   8.3.2 RS-422 cable

■ Settings by switch

Make the communication settings by each setting switch of the RS-232/RS-422 interface converter.

(1) Transmission speed settings

Transmission speed (bps)	Switch position
9600	2
19200	1

BAUD RATE

(2) Mode setting switch

Mode	Switch position
2-wire type	2W-AUTO
4-wire type	4 WIRES

2WIRES
2W-AUTO
4WIRES

(3) Echoback setting switch

Setting	Switch position
OFF	OFF

ECHO BACK

8.5.5　Link unit setting

■ Communication settings

Make the communication settings using each setting switch of the link unit.

For the detail settings, refer to the following manual.
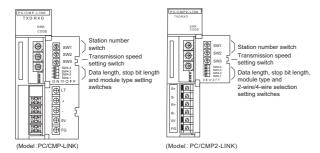

☞　User's Manual of the JTEKT link unit
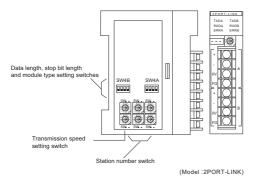

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
Data bit[*1]	8bits, 7bits
Stop bit[*1]	1bit, 2bits
Station No.[*1]	0 to 37 (Octal)
Selection of module type	Computer link
Selection of 2-wire type or 4- wire type[*2]	2-wire type or 4-wire type

*1　Adjust the settings with GOT settings.
*2　Set referring to the RS-422 connection diagram.For details, refer to the following.

☞　8.3.2 RS-422 cable

■ Settings by switch

(Model :PC/CMP-LINK)

(Model : PC/CMP2-LINK)

(Model :2PORT-LINK)

(1) Setting of the station No.
Set the station No. between 00 and 37 (Octal).

Switch name	Station number setting
SW1	Upper digit
SW2	Lower digit

(2) Transmission speed settings

Switch name	Switch position	Transmission speed (bps)
SW3	2	9600
	1	19200

(3) Data length, stop bit length, module type and 2-wire/ 4-wire type communication selection setting
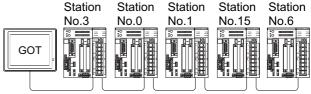

Switch name	Setting item	Set value	Switch No. 4	3	2	1
SW4	Data bit	8bits	OFF			
		7bits	ON			
	Stop bit length	2bits		OFF		
		1bit		ON		
	Module type	PLC link unit			OFF	
		Computer link			ON	
	2-wire type/4-wire type communication selection[*1]	2-wire type communication				OFF
		4-wire type communication				ON

*1　The setting is available only for the link unit (Model: PC/ CMP2-LINK).

8.5.6　Station number setting

Set each station number so that no station number overlaps.

The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

Station No.3　Station No.0　Station No.1　Station No.15　Station No.6

GOT

Examples of station number setting

(1) Direct specification
Specify the station No. of the PLC to be changed when setting device.

Specification range
00 to 37 (Octal)

8.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item		Description
Device		Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
	Program No.	Sets the number of the program for which the device is set.
Information		Displays the device type and setting range which are selected in [Device].
Network		Set the monitor target of the set device.
	Station No.	Set this item when monitoring the PLC of the specified station No. (octal)

POINT

Program number setting (when PC3JG, PC3J or PC3JD is used)

Setting of a program number is allowed for the devices indicated below.

Internal relay (M), keep relay (K), link relay (L), special relay (V), edge detection (P), timer (T), counter (C), data register (D), link register (R), special register (S), current value register (N)

8.6.1 JTEKT PLC (JTEKT TOYOPUC-PLC)

	Device name	Setting range	Device No. representation
Bit device	Input (X)[1]	X000 to X7FF	Hexadecimal
	Output (Y)[1]	Y000 to Y7FF	
	Link relay (L)	L000 to L7FF	
	Internal relay (M)	M000 to M7FF	
	Keep relay (K)	K000 to K2FF	
	Edge detection (P)	P000 to P1FF	
	Timer (T)[1]	T000 to T1FF	
	Counter (C)[1]	C000 to C1FF	
	Special relay (V)	V000 to V0FF	
	Extended input (EX)[1]	EX000 to EX7FF	
	Extended output (EY)[1]	EY000 to EY7FF	
	Extended internal relay (EM)	EM0000 to EM1FFF	
	Extended keep-relay (EK)	EK000 to EKFFF	
	Extended special relay (EV)	EV000 to EVFFF	
	Extended timer (ET)[1]	ET000 to ET7FF	
	Extended counter (EC)[1]	EC000 to EC7FF	
	Extended link relay (EL)	EL0000 to EL1FFF	
	Extended edge detection (EP)	EP000 to EPFFF	
	Extended input 2 (GX)[1][3]	GX0000 to GXFFFF	
	Extended output 2 (GY)[1][3]	GY0000 to GYFFFF	
	Extended internal relay (GM)[3]	GM0000 to GMFFFF	
	The bit specification of the word device (except extended buffer register, setup value register)	Setting range of each word device	
Word device	Data register (D)	D0000 to D2FFF	Hexadecimal
	Link register (R)	R0000 to R07FF	
	Current value register (N)	N0000 to N01FF	
	Special register (S)	S0000 to S03FF	
	File register (B)	B0000 to B1FFF	
	Extended present value register (EN)	EN0000 to EN07FF	
	Extended setup value register (H)	H0000 to H07FF	
	Extended special register (ES)	ES0000 to ES07FF	
	Extended data register (U)	U0000 to U7FFF	
	Extended buffer register (EB)[3]	EB00000 to EB07FFF EB08000 to EB0FFFF EB10000 to EB17FFF EB18000 to EB1FFFF	
	Setup value register (TCS)[2]	TCS0000 to TCS01FF	
	The word specification of the bit device	Setting range of each bit device	

[1] Overlapped device designation of an input (X, EX, GX) and an output (Y, EY, GY), or a timer (T, ET) and a counter (C, EC) is not allowed.(Example: X0000 and Y0000, EX0000 and EY0000)

[2] To store a setting value of T (timer) or C (counter), use TCS. Setting value of a timer and a counter is stored in TCS. (TCS cannot be used if a timer or a counter is not in a program.)

[3] GX, GY, GM and EB can be used only in the PC3JG separate mode. Access to GX, GY, GM and EB through a link module is not possible.

8.7 Precautions

■ Station No. settings of the PLC side

In the system configuration, the PLC with the station number set with the host address must be included.For details of host address setting, refer to the following.

☞ 8.4.1 Setting communication interface (Communication settings)

■ GOT clock control

The GOT clock function is available only for the PLC with the station number set with the host address. For details of host address setting, refer to the following.

☞ 8.4.1 Setting communication interface (Communication settings)

■ System configuration

If the system is configured by mixing the PC3J extended function compliant PLC with the PC3J extended function incompliant PLC, normal communication may not be performed.Unify the PLCs into PC3J extended function compliant or PC3J extended function incompliant to configure the system.

■ System alarm

The system alarm can be displayed only for the PLC set with a host address.When connected to the PC3J extended function compliant PLC, only the system alarm of program No. 1 can be displayed.

9

CONNECTION TO SHARP PLC

9. CONNECTION TO SHARP PLC

9.1 Connectable Model List
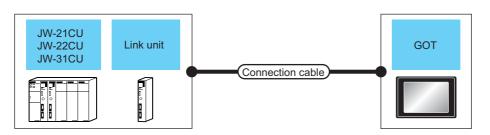

The following table shows the connectable models.

Model name	Clock	Communication Type	Connectable GOT	Refer to
JW-21CU	×	RS-422	GT27 GT25 GT23	☞ 9.2.1
JW-22CU	○	RS-232 RS-422		
JW-31CUH	×	RS-422	GT27 GT25 GT23	☞ 9.2.2
JW-32CUH	○	RS-232 RS-422		
JW-33CUH	○			
JW-50CUH	×	RS-422	GT27 GT25 GT23	☞ 9.2.3
JW-70CUH	○[*1]	RS-232 RS-422		
JW-100CUH	○[*1]			
JW-100CU	○			
Z-512J	○	RS-232 RS-422	GT27 GT25 GT23	☞ 9.2.4

*1   When the link unit (ZW-10CM) is used in JW-70CUH/100CUH, the clock function is not available.

9.2   System Configuration

9.2.1   Connecting to JW-21CU or JW-22CU

PLC			Connection cable	Max. distance	GOT		Number of connectable equipment
Model name	Link unit[*1]	Communi nication Type	Cable model Connection diagram number		Option device	Model	
JW-22CU	-	RS-232	GT09-C30R20601-15P(3m) or (User preparing) RS-232 connection diagram 1)	Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	1 GOT for 1 PLC
					GT15-RS2-9P	GT 27 GT 25	
			GT09-C30R40601-15P(3m) GT09-C100R40601-15P(10m) GT09-C200R40601-15P(20m) GT09-C300R40601-15P(30m) or (User preparing) RS-422 connection diagram 1)	Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	
					GT15-RS4-9S	GT 27 GT 25	
JW-21CU JW-22CU	JW-21CM	RS-422	GT09-C30R40603-6T(3m) GT09-C100R40603-6T(10m) GT09-C200R40603-6T(20m) GT09-C300R40603-6T(30m) or (User preparing) RS-422 connection diagram 3)	Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	
					GT15-RS4-9S	GT 27 GT 25	

*1   The link unit is a product manufactured by SHARP Corporation.
For details of this product, contact SHARP Corporation.

9.2.2　Connecting to JW-31CUH, JW-32CUH or JW-33CUH

PLC			Connection cable		Max. distance	GOT		Number of connectable equipment
Model name	Link unit*1	Communication Type	Cable model Connection diagram number			Option device	Model	
JW-32CUH JW-33CUH	-	RS-232	GT09-C30R20602-15P(3m) or (User preparing) RS-232 connection diagram 2)		Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	1 GOT for 1 PLC
						GT15-RS2-9P	GT 27 GT 25	
		RS-422	GT09-C30R40602-15P(3m) GT09-C100R40602-15P(10m) GT09-C200R40602-15P(20m) GT09-C300R40602-15P(30m) or (User preparing) RS-422 connection diagram 2)		Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	
						GT15-RS4-9S	GT 27 GT 25	
JW-31CUH JW-32CUH JW-33CUH	JW-21CM	RS-422	GT09-C30R40603-6T(3m) GT09-C100R40603-6T(10m) GT09-C200R40603-6T(20m) GT09-C300R40603-6T(30m) or (User preparing) RS-422 connection diagram 3)		Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	
						GT15-RS4-9S	GT 27 GT 25	

*1　Use the link unit supporting JW-31CUH, JW-32CUH or JW-33CUH.
　　The link unit is a product manufactured by SHARP Corporation.
　　For details of this product, contact SHARP Corporation.

9.2.3　Connecting to JW-50CUH, JW-70CUH, JW-100CUH or JW-100CU

PLC			Connection cable	Max. distance	GOT		Number of connectable equipment
Model name	Link unit[*1]	Communication Type	Cable model Connection diagram number		Option device	Model	
JW-70CUH JW-100CUH JW-100CU	-	RS-232	GT09-C30R20601-15P(3m) or (User preparing) RS-232 connection diagram 1)	Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23	1 GOT for 1 PLC
					GT15-RS2-9P	GT 27 GT 25	
		RS-422	GT09-C30R40601-15P(3m) GT09-C100R40601-15P(10m) GT09-C200R40601-15P(20m) GT09-C300R40601-15P(30m) or (User preparing) RS-422 connection diagram 1)	Differs according to PLC side specifications.	- (Built into GOT)	GT 27 GT 25 GT 23

*1   GT27: CD, GT23: NC

(2) RS-232 connection diagram 2)

GOT side					SHARP PLC side
CD	1			1	FG
RD(RXD)	2	←		2	SD
SD(TXD)	3	→		4	RD
ER(DTR)	4	→		12	CTS
SG	5			7	SG
DR(DSR)	6	←		8	RTS
RS(RTS)	7				
CS(CTS)	8				
-	9				

*1   GT27: CD, GT23: NC

■ Precautions when preparing a cable

(3) Cable length
The maximum length of the RS-232 cable differs according to the specifications of the SHARP PLC. For details, refer to the following manual.

☞ SHARP PLC user's Manual

(4) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(5) SHARP PLC side connector
Use the connector compatible with the SHARP PLC side module.
For details, refer to the SHARP PLC user's manual.
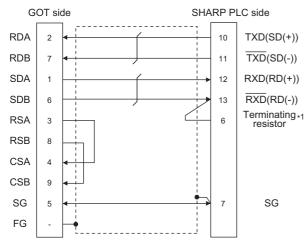

9.3.2 RS-422 cable

■ Connection diagram

(1) RS-422 connection diagram 1)

GOT side			SHARP PLC side
RDA	2		10	TXD(SD(+))
RDB	7		11	$\overline{TXD}$(SD(-))
SDA	1		12	RXD(RD(+))
SDB	6		13	$\overline{RXD}$(RD(-))
RSA	3		6	Terminating *1 resistor
RSB	8			
CSA	4			
CSB	9			
SG	5		7	SG
FG	-			
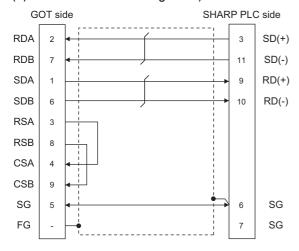

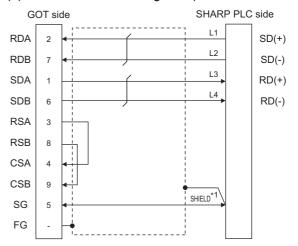

*1 Connect the terminating resistor at pin 6 with pin 13 (RXD) only at the terminal station.
(Valid for JW-70CUH and JW-100CUH. The terminating resistor does not exist in JW-22CU and JW-100CU.)

(2) RS-422 connection diagram 2)

GOT side			SHARP PLC side

CSA	4		
CSB	9		
SG	5	SHIELD*1	
FG	-		

*1 Two SHIELD terminals are provided for JW-10CM and ZW-10CM.Connect to either SHIELD terminal.

■ Precautions when preparing a cable

(4) Cable length
The maximum length of the RS-422 cable differs according to the specifications of the SHARP PLC. For details, refer to the following manual.

☞ SHARP PLC user's Manual

(5) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(6) SHARP PLC side connector
Use the connector compatible with the SHARP PLC side module.
For details, refer to the SHARP PLC user's manual.

■ Connecting terminating resistors

(1) GOT side

Set the terminating resistor setting switch of the GOT main unit to "Disable".
For the procedure to set the terminating resistor, refer to the following.

☞ 1.4.3 Terminating resistors of GOT

(2) SHARP PLC side

Connect the terminating resistor on the SHARP PLC side when connecting a GOT to a SHARP PLC.

The PLC CPUs and the modules on the PLC CPU side requiring a terminating resistor are shown below.

(a) JW-22CU

Turn "ON" the terminating resistor setting switch (SW1) on the back of JW-22CU to validate the terminating resistor.

(b) JW-70CUH and JW-100CUH

Connect the pin 6 (terminating resistor) of the communication port connection connector with the pin 13 (RXD) only at the terminal station to validate the terminating resistor.
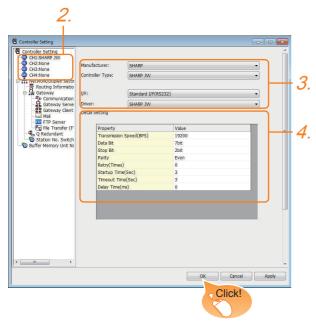

(c) JW-21CM, JW-10CM and ZW-10CM

Turn "ON" the terminator switch (SW7) on the front panel only at the terminal station to validate the terminating resistor.

9.4 GOT Side Settings

9.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: SHARP
   • Controller Type: SHARP JW
   • I/F: Interface to be used
   • Driver: SHARP JW

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 9.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

9.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	19200
Data Bit	7 bit
Stop Bit	2 bit
Parity	Even
Retry(Times)	0
Startup Time(Sec)	3
Timeout Time(Sec)	3
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 19200bps)	4800bps, 9600bps, 19200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 7bits)	7bit (fixed)
Stop Bit	Specify the stop bit length for communications. (Default: 2bit)	2bit (fixed)
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	Even (fixed)
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Startup Time	Specify the time period from the GOT startup until GOT starts the communication with the PLC CPU. (Default: 3sec)	3 to 30sec
Timeout Time*1	Set the time period for a communication to time out. (Default: 3sec)	3 to 30sec
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300ms

*1 When connecting to the communication port, set "Delay Time" of the GOT side to 30ms or more.

POINT

(1) Communication interface setting by the Utility
    The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
    For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
    When settings are made by GT Designer3 or the Utility, the latest setting is effective.

9. CONNECTION TO SHARP PLC
9.4 GOT Side Settings

9.5 PLC Side Setting

Model name		Refer to
PLC CPU	JW-22CU	9.5.1
	JW-32CUH, JW-33CUH	9.5.2
	JW-70CUH, JW-100CUH, JW-100CU	9.5.1
	Z-512J	9.5.2
Link unit	JW-21CM	9.5.3
	JW-10CM, ZW-10CM	9.5.4

9.5.1 Connecting to JW-22CU, JW-70CUH, JW-100CUH or JW-100CU

■ **System memory setting**

Set the system memory.

System memory No.	Item	Set value
#236	Transmission speed, parity and stop bit	D7 D6 D5 D4 D3 D2 to D0 0 0 (3) (2) (1) (1) Transmission speed [*1] [*2] 000: 19200bps 001: 9600bps 010: 4800bps (2) Parity 10 (fixed): Even (3) Stop bit 1 (fixed): 2 bits
#237	Station No.	1: Station No. 1 (fixed)

[*1] Indicates only the transmission speeds that can be set on the GOT side.

[*2] Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.
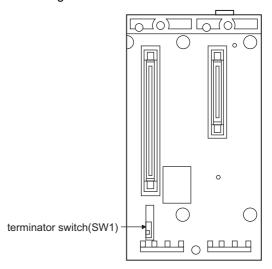

☞ 9.4.1 Setting communication interface (Communication settings)

■ **Terminating resistor setting switch (For JW-22CU only)**

Set the terminating resistor setting switch.

(1) When using KV-L20R or KV-L20

terminator switch(SW1) →

Settings	
For RS-232 communication	RS-422 communication
OFF (no terminating resistor)	ON (terminating resistor attached)

ON
OFF

9.5.2 Connecting to JW-32CUH, JW-33CUH or Z-512J

■ Settings for connecting to communication port 1 (PG/COMM1 port)

Set the system memory.

System memory No.	Item	Set value
#234	Transmission speed, parity and stop bit	D7 D6 D5 D4 D3 D2 to D0 `0  0  (3)  (2)      (1)` (1) Transmission speed [1] [2] 000: 19200bps 001: 9600bps 010: 4800bps (2) Parity 10 (fixed): Even (3) Stop bit 1 (fixed): 2 bits
#235	Station No.	1: Station No. 1 (fixed)

[1] Indicates only the transmission speeds that can be set on the GOT side.
[2] Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 9.4.1 Setting communication interface (Communication settings)

■ Settings for connecting to communication port 2 (PG/COMM2 port)

Set the system memory.
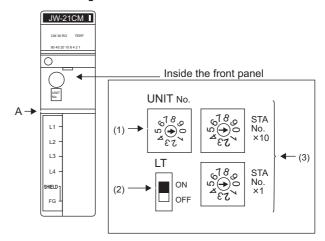

System memory No.	Item	Set value
#236	Transmission speed, parity and stop bit	D7 D6 D5 D4 D3 D2 to D0 `0  0  (3)  (2)      (1)` (1) Transmission speed [1] [2] 000: 19200bps 001: 9600bps 010: 4800bps (2) Parity 10 (fixed): Even (3) Stop bit 1 (fixed): 2 bits
#237	Station No.	1: Station No. 1 (fixed)

[1] Indicates only the transmission speeds that can be set on the GOT side.
[2] Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.
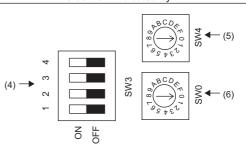

☞ 9.4.1 Setting communication interface (Communication settings)

9.5.3 Connecting to the link unit (JW-21CM)

■ Switch setting of the link unit (JW-21CM)

Make setting for each switch.

(1) Module No. switch (SW8)
The module No. switch is not used for communication with the GOT.

(2) Terminator switch(SW7)

	Settings	Setting details
LT ON OFF	ON[1]	Terminating resistor validated

[1] Turn on only for the terminal station.

(3) Station number setting switch(SW1,SW2)

	Switch No.	Settings	Setting details
STA No. ×10	SW1	Station No. lower digit (10^0 digit)	1 (fixed)
STA No. ×1	SW2	Station No. upper digit (10^1 digit)	0 (fixed)

(4) Operation mode setting switch(SW3)

Switch No.	Settings	Setting details
SW3-1	OFF (fixed)	Invalid
SW3-2	ON (fixed)	4-wire type
SW3-3	OFF (fixed)	Invalid
SW3-4	ON (fixed)	Even

(5) Transmission speed setting switch (SW4)

Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 9.4.1 Setting communication interface (Communication settings)

Setting[1]	Setting details
0	19200bps
1	9600bps
2	4800bps

*1 Indicates only the transmission speeds that can be set on the GOT side.
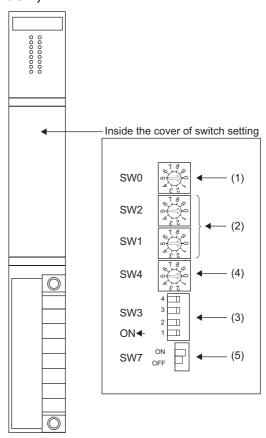

(6) Function setting switch(SW0)

Settings	Setting details
4 (fixed)	Computer link

9.5.4 Connecting to the link unit (JW-10CM or ZW-10CM)

■ Switch setting of link unit (JW-10CM and ZW-10CM)

Inside the cover of switch setting

SW0 ← (1)
SW2
SW1 } ← (2)
SW4 ← (4)
SW3 ← (3)
SW7 ← (5)

(1) Function setting switch(SW0)

	Settings	Setting details
SW0	4 (fixed)	Computer link (command mode)

(2) Station number switch(SW1,SW2)

	Switch No.	Settings	Setting details
SW2	SW1	Station No. lower digit (10^0 digit)	1 (fixed)
SW1	SW2	Station No. upper digit (10^1 digit)	0 (fixed)

(3) Operation mode setting switch(SW3)

	Switch No.	Settings	Setting details
SW3	SW3-1	OFF (fixed)	Invalid
ON	SW3-2	ON (fixed)	4-wire type
	SW3-3	OFF (fixed)	Invalid
	SW3-4	ON (fixed)	Even

(4) Transmission speed setting switch (SW4)
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side,
refer to the following.

☞ 9.4.1 Setting communication interface
(Communication settings)

SW4	Setting[1]	Setting details
	0	19200bps
	1	9600bps
	2	4800bps

[1] Indicates only the transmission speeds that can be set on the GOT side.

(5) Terminator switch(SW7)

SW7	Settings	Setting details
	ON[2]	Terminating resistor validated

[2] Set to ON only for the terminal station.

9.6　Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information	Displays the device type and setting range which are selected in [Device].

POINT

(1) Device settings of SHARP PLC
  (a) When setting a register as a bit device
    • Registers
      Set the type (first 2 digits) and the address.

Number ——   —— Address
    • File register
      Set the file number and the address.

File number ——   —— Address
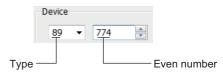

(b) When setting a register and memory as a word device.
  • I/O relay
    Set a combination of the device address (multiple of 16)+bit address format (fixed to 0).

Even number ——   —— The next line must be set to 0,for it is bit address.

  • Registers and file register
    Set the device address (multiple of 16).

Type ——   —— Even number

(2) Monitoring the timer (T) and the counter (C)
  (a) Address setting
    Be sure not to set the same address range for the timer (T) and the counter (C).
    Even if these addresses are overlapped, GOT displays no error.
    GOT monitors them according to the address instead of the device name.
    Therefore, if a device which is invalid for the SHARP PLC side parameter is set using GT Designer3, GOT monitors other device (a device corresponding to the address range of the set device).
    Example:

    Content in SHARP PLC parameter setting

    T0000 to T1000
    C1001 to C1777

    Content in GT Designer3
    parameter setting

    Even if GT Designer3 is set to "C0000", GOT will also monitor "T0000".

  (b) Contact writing into timer (T) and the counter (C)
    Writing the contact for the timer (T) and the counter (C) can only be done while the CPU is in RUN (while the timer and counter is in operation).

9.6.1   SHARP PLC (SHARP JW)

```

*1   Connect FG grounding to the appropriate part of a cable shield line.

■ Precautions when preparing a cable

(2) Cable length
    The length of the RS-232 cable must be 15m or less.

(3) GOT side connector
    For the GOT side connector, refer to the following.
    ☞ 1.4.1 GOT connector specifications

(4) Shinko Technos indicating controller side connector
    Use the connector compatible with the Shinko Technos indicating controller side.
    For details, refer to the user's manual of the Shinko Technos indicating controller.

10.3.2 RS-485 cable

■ Connection diagram

(1) RS-485 connection diagram 1)

*1 Pin No. of communication converter differs depending on the model.
Refer to the following table.
*2 Connect FG grounding to the appropriate part of a cable shield line.
*3 For details of the terminating resistor specifications, refer to the following manual.

☞ User's Manual of the Shinko Technos indicating controller

Signal name	Model of indicating controller

SG	15	17	17	14	17	18	17	16	16

■ Precautions when preparing a cable

(8) Cable length

  (a) The length of the RS-485 cable used for direct connecting the indicating controller to the communication converter
The length of the RS-485 cable must be 1200m or less.

  (b) The length of the RS-485 cable used for direct connecting the indicating controller to GOT
The length of the RS-485 cable must be 500m or less.

(9) GOT side connector
For the GOT side connector, refer to the following.

  ☞ 1.4.1 GOT connector specifications

(10) Shinko Technos indicating controller side connector
Use the connector compatible with the Shinko Technos indicating controller side.
For details, refer to the user's manual of the Shinko Technos indicating controller.

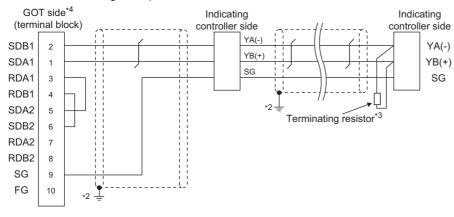

■ Connecting terminating resistors

(1) GOT side
Set the terminating resistor setting switch of the GOT main unit to "100 OHM".
For the procedure to set the terminating resistor, refer to the following.

  ☞ 1.4.3 Terminating resistors of GOT
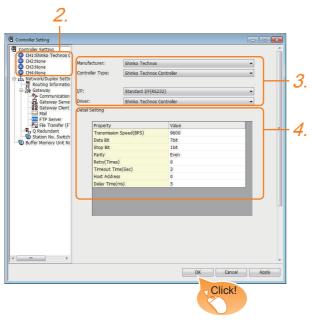

(2) Shinko Technos indicating controller side
When connecting a Shinko Technos indicating controller to the GOT, a terminating resistor must be connected to the Shinko Technos indicating controller.

  ☞ User's Manual of the Shinko Technos indicating controller

10.4 GOT Side Settings

10.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: Shinko Technos
   • Controller Type: Shinko Technos Controller
   • I/F: Interface to be used
   • Driver: Shinko Technos Controller

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 10.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

10.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	7 bit
Stop Bit	1 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Host Address	0
Delay Time(ms)	5

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 7bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	3 to 30sec
Host Address	Specify the host address (station No. of the GOT to which the indicating controller is connected) in the connected network. (Default: 0)	0 to 94
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 5ms)	0 to 300ms

POINT

(1) Communication interface setting by the Utility
   The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
   For details on the Utility, refer to the following manual.

   ☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
   When settings are made by GT Designer3 or the Utility, the latest setting is effective.

10.5 Indicating Controller Side Setting

Model name		Refer to
Indicating controller	ACS-13A, DCL-33A, JC, JCM-33A, JIR-301-M, PCD-300 Series, PC-900 Series (PC-955-□/M,C5, PC-935-□/M,C5)	10.5.1
	FCD-100, FCR-100, FCR-23A, FIR Series, PC-900 Series (PC-955-□/M,C, PC-935-□/M,C)	10.5.2
Communication converter	IF-400	10.5.3

10.5.1 Connecting to ACS-13A, DCL-33A, JC, JCM-33A, JIR-301-M, PCD-300 Series, PC-900 Series (PC-955-[ ]/M,C5, PC-935-[ ]/M,C5)

■ Communication settings

Make the communication settings by operating the key of the indicating controller.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
Data bit	7bits (fixed)
Parity bit	Even (fixed)
Stop bit	1bit (fixed)
Station No.[*2][*3]	0 to 95
Communication protocol	Shinko protocol

[*1] Adjust the settings with GOT settings.
[*2] Avoid duplication of the station No. with any of the other units.
[*3] When setting the "95" to the station No., the read-out of data cannot be performed.

10.5.2 Connecting to FCD-100, FCR-100, FCR-23A, FIR Series, PC-900 Series (PC-955-[ ]/M,C, PC-935-[ ]/M,C)

■ Communication settings

Make the communication settings by operating the key of the indicating controller.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
Data bit	7bits (fixed)
Parity bit	Even (fixed)
Stop bit	1bit (Fixed)
Station No.[*1][*2]	0 to 95
Communication protocol	Shinko protocol

[*1] Adjust the settings with GOT settings.
[*2] When setting the "95" to the station No., the read-out of data cannot be performed.

10.5.3 Connecting to communication converter (IF-400)

■ Communication settings

Make the communication settings by operating the key of the communication converter.

Item	Set value
Transmission speed[*1]	9600bps, 19200bps
Sending/Receiving switching period[*2]	1 character, 2 character

[*1] Adjust the settings with GOT and the indicating controller settings.
[*2] The setting of 1 character is recommended.
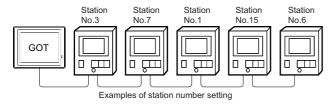

10.5.4 Station No. settings

Set each station number so that no station number overlaps.

The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

Examples of station number setting

(1) Direct specification
   When setting the device, specify the station number of the indicating controller of which data is to be changed.

Specification range
0 to 94

(2) Indirect specification
   When setting the device, indirectly specify the station number of the indicating controller of which data is to be changed using the 16-bit GOT internal data register (GD10 to GD25).
   When specifying the station No. from 100 to 115 on GT Designer3, the value of GD10 to GD25 compatible to the station No. specification will be the station No. of the indicating controller.

Specification station NO.	Compatible device	Setting range
100	GD10	
101	GD11	
102	GD12	
103	GD13	
104	GD14	
105	GD15	
106	GD16	0 to 94
107	GD17	For the setting other than the above, error (dedicated device is out of range) will occur.
108	GD18	
109	GD19	
110	GD20	
111	GD21	
112	GD22	
113	GD23	
114	GD24	
115	GD25	

(3) All station specification
   Target station differs depending on write-in operation or read-out operation.
   • For write-in operation, all station will be a target.
     In the WORD BIT write-in operation, only the indicating controller whose station No. is the same as host address is applicable. For details of host address setting, refer to the following.

   ☞ 10.4.1 Setting communication interface (Communication settings)

   • In the read-out operation, only the indicating controller whose station No. is the same as host address is applicable.
     For details of host address setting, refer to the following.

   ☞ 10.4.1 Setting communication interface (Communication settings)

10.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item		Description
Device		Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
	Memory No.[*1]	Set the memory number (None, 0 to 7) of the device to be monitored.
Information		Displays the device type and setting range which are selected in [Device].
Network		Set the monitor target of the set device.
	All	Select this item when writing data to all the indicating controllers connected. During monitoring, the indicating controller which is set for [Host Address] of the communication detail setting is monitored. (When writing the data in numerical input, the data is written to all connected indicating controllers during input, and the indicating controller that is set for [Host Address] is monitored during other than input (displaying).)
	Station No.	Select this item when monitoring the indicating controller of the specified station No. After selecting, set the station No. of the indicating controller in the following range. 0 to 94: To monitor the indicating controller of the specified station No. 95: Same as the setting of [All]. 100 to 115: To specify the station No. of the indicating controller to be monitored by the value of GOT data register (GD).[*2]

*1 The device name is displayed as follows when the memory number (0 to 7) is set.

Memory No.	Displayed device name
None	Device Number
0	M0/Device Number
1	M1/Device Number
2	M2/Device Number
3	M3/Device Number
4	M4/Device Number
5	M5/Device Number
6	M6/Device Number
7	M7/Device Number

*2 The following shows the relation between station numbers of the indicating controller and the GOT data register.

Station No.	GOT data register (GD)	Setting range
100	GD10	0 to 94 (If setting a value outside the range above, a device range error occurs.)
101	GD11	
:	:	
114	GD24	
115	GD25	

10.6.1 SHINKO indicating controller (Shinko Technos Controller)

	Device name	Setting range	Device No. representation
Bit device	The bit specification of the word device[*1]	Setting range of each word device	-
Word device	Data item (..)	..0001 to ..7901	Hexadecimal

*1 As bit specification of a word device is performed after the GOT reads the value, do not change the value with the indicating controller during this period.

10.7 Precautions

■ Station number settings of indicating controller

In the system configuration, the indicating controller with the station number set with the host address must be included.
For details of host address setting, refer to the following.

☞ 10.4.1 Setting communication interface (Communication settings)

■ GOT clock control

Since the indicating controller does not have a clock function, the settings of [time adjusting] or [time broad cast] by GOT clock control will be disabled.

■ When using the communication converter IF-400

When using the communication converter IF-400, some communication error may occur.Set the number of retries to more than one time.

■ Disconnecting some of multiple connected equipment

The GOT can disconnect some of multiple connected equipment by setting GOT internal device.For example, the faulty station where a communication timeout error occurs can be disconnected from connected equipment.
For details of GOT internal device setting, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

*1   Terminal number of the controller and the converter differ depending on the model. Refer to the following table.

Signal name	Controller					Converter
	LT300	LT400	DZ1000, DZ2000	DB1000	DB2000	SC8-10
	Terminal No.	Terminal No.	Terminal No.	Terminal No.	Terminal No.	Terminal No.
SD	11	11	19	13	27	2
RD	13	13	21	12	26	1
SG	15	15	23	14	28	3

Signal name	Controller				
	KP1000	KP2000		SE3000	AL3000 AH3000
	Terminal No.	Terminal No.*1		Terminal name	Terminal name
		R*2, B*2, C*2, D*2	B*2, E*2		
SD	13	27	30	SD	SD
RD	12	26	29	RD	RD
SG	14	28	31	SG	SG

*1   For KP2000 series, the terminal No. differs according to the model.
*2   This indicates the symbols of the position 10) (third zone) of the following models.
Model: KP2 4) 5) 6) 7) 8) 9) 10) – 12) 13) 14)
For the symbol B, two terminal numbers are available. Select as necessary.

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-232 cable must be 15m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.
☞ 1.4.1 GOT connector specifications

(3) CHINO controller side connector
Use the connector compatible with the CHINO controller side module.
For details, refer to the user's manual of the CHINO controller.

11.3.2 RS-422 cable

■ Connection diagram

(1) RS422 connection diagram 1)

*1 Pin No. of controller differs depending on the model. Refer to the following table.
*2 Terminating resistor should be provided for a controller which will be a terminal.
*3 Do not connect SG of the controller and SG of the converter.
*4 Set the Communication Type switch of the converter to RS-422.

Signal name	Controller type				
	LT300	LT400	DZ1000, DZ2000	DB1000	DB2000

*5　For KP2000 series, the terminal No. differs according to the model.
*6　This indicates the symbols of the position 10) (third zone) of the following models.
　　Model: KP2 4) 5) 6) 7) 8) 9) 10) – 12) 13) 14)

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-422 cable must be 1200m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(3) CHINO controller side connector
Use the connector compatible with the CHINO controller side module.
For details, refer to the user's manual of the CHINO controller.

■ Connecting terminating resistors

(1) GOT side
Set the terminating resistor setting switch of the GOT main unit to "100 OHM".
For the procedure to set the terminating resistor, refer to the following.

☞ 1.4.3 Terminating resistors of GOT

(2) CHINO controller side
When connecting a CHINO controller to the GOT, a terminating resistor must be connected to the CHINO controller.

☞ User's Manual of the CHINO controller

11.3.3 RS-485 cable

■ Precautions when preparing a cable

(1) Cable length
   The maximum length of the RS-485 cable must be
   1,200m or less.

(2) GOT side connector
   For the GOT side connector, refer to the following.

   ☞ 1.4.1 GOT connector specifications

(3) CHINO controller side connector
   Use the connector compatible with the CHINO
   controller side module.
   For details, refer to the user's manual of the CHINO
   controller.

■ Connecting terminating resistors

(1) GOT side
   Set the terminating resistor setting switch of the GOT
   main unit to "100 OHM".
   For the procedure to set the terminating resistor, refer
   to the following.

   ☞ 1.4.3 Terminating resistors of GOT

(2) CHINO controller side
   When connecting a CHINO controller to the GOT, a
   terminating resistor must be connected to the CHINO
   controller.

   ☞ User's Manual of the CHINO controller

11.4 GOT Side Settings

11.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: CHINO
   • Controller Type: CHINO Controllers
   • I/F: Interface to be used
   • Driver: CHINO Controller(MODBUS)

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 11.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

11.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	1 bit
Parity	None
Retry(Times)	3
Timeout Time(Sec)	3
Host Address	1
Delay Time(ms)	5
Format	1

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: None)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 3times)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 1sec)	1 to 30sec
Host Address	Specify the host address (station No. of the GOT to which the controller is connected) in the connected network. (Default: 1)	1 to 99
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 5ms)	0 to 300ms
Format	Select the communication format. (Default: 1) Format 1: Accessible to LT230/300/400/830, DZ1000/2000, Not accessible to GT120 Format 2: Accessible to GT120	1/2

POINT

(1) Format
   When connecting to GT120, specify format 2.

(2) Delay Time
   When connecting to the following models, set the send delay time to 30ms or more.

Model name
DZ1000, DZ2000

(3) Communication interface setting by the Utility
   The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
   For details on the Utility, refer to the following manual.

   ☞ GOT2000 Series User's Manual (Utility)

(4) Precedence in communication settings
   When settings are made by GT Designer3 or the Utility, the latest setting is effective.

11.5 Controller Side Setting

Model name		Refer to
Controller	LT230, LT300	11.5.1
	LT400, LT830	11.5.2
	DZ1000, DZ2000	11.5.3
	DB1000, DB2000	11.5.4
	GT120	11.5.5
	KP1000, KP2000	11.5.6
	AL3000, AH3000	11.5.7
	SE3000	11.5.8
	JU	11.5.9
	KE3000	11.5.10
	LE5000	11.5.11
Converter	SC8-10	11.5.12

11.5.1 Connecting to LT230, LT300 Series

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting to Lock 4.

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	rtU: MODBUS RTU
Function	Com: Upper communication
Station No.[*1]	1 to 99
Transmission speed[*2]	9600bps, 19200bps
Character[*2] (Bit length, Parity bit, Stop bit)	5: 8bit, None, 1bit 6: 8bit, None, 2bit 7: 8bit, Even, 1bit 8: 8bit, Even, 2bit 9: 8bit, Odd, 1bit 10: 8bit, Odd, 2bit

[*1] Avoid duplication of the station No. with any of the other units.
[*2] Adjust the settings with GOT settings.

11.5.2 Connecting to LT400, LT830 Series

■ Key Lock setting

To write the Digital and the Analog parameters, set thefollowing Key Lock setting
• LT400: Lock4
• LT830: Lock3

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	rtU: MODBUS RTU
Function	Com: Upper communication
Station No.[*1]	1 to 99
Transmission speed[*2]	9600bps, 19200bps
Character[*2] (Bit length, Parity bit, Stop bit)	8N1: 8bit, None, 1bit 8N2: 8bit, None, 2bit 8E1: 8bit, Even, 1bit 8E2: 8bit, Even, 2bit 8O1: 8bit, Odd, 1bit 8O2: 8bit, Odd, 2bit

[*1] Avoid duplication of the station No. with any of the other units.
[*2] Adjust the settings with GOT settings.

11.5.3 Connecting to DZ1000, DZ2000 Series

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting to Lock 2.

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	rtU: MODBUS RTU
Function	Com: Upper communication
Station No.[*1]	1 to 31
Transmission speed[*2]	9600bps, 19200bps
Data bit	8bits (fixed)
Stop bit	1bit (fixed)
Parity bit	None (fixed)

[*1] Avoid duplication of the station No. with any of the other units.
[*2] Adjust the settings with GOT settings.

11.5.4 Connecting to DB1000, DB2000 Series

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	MODBUS (RTU)
Function	Com: Upper communication
Station No.[*1]	01 to 99
Transmission speed[*2]	9600bps, 19200bps, 38400bps
Character	7BIT/EVEN/STOP1 7BIT/EVEN/STOP2 7BIT/ODD/STOP1 7BIT/ODD/STOP2 8BIT/NON/STOP1 8BIT/NON/STOP2 8BIT/EVEN/STOP1 8BIT/EVEN/STOP2 8BIT/ODD/STOP1 8BIT/ODD/STOP2

 *1 Avoid duplication of the station No. with any of the other units.
 *2 Adjust the settings with GOT settings.

11.5.5 Connecting to GT120 Series

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting to Lock 3.

■ Communication settings

Release the controller lock function in advance and set the following communication settings.
After completing the communication settings, set the Key Lock setting to Lock 3.

Item	Set value
Communication protocol	comr: MODBUS RTU
Station No.[*1]	1 to 95
Transmission speed[*2]	96: 9600bps 192: 19200bps
Data bit	8bits (fixed)
Stop bit[*2]	1bit, 2bits
Parity bit[*2]	nonE: None EVEn: Even odd: Odd

 *1 Avoid duplication of the station No. with any of the other units.
 *2 Adjust the settings with GOT settings.

11.5.6 Connecting to KP1000, KP2000

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting.

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	MODBUS (RTU)
Function	COM
Station No.[*1]	1 to 99
Transmission speed[*2]	2400bps, 4800bps, 9600bps, 19200bps, 38400bps
Character[*2] (Bit length, Parity bit, Stop bit)	8BIT/NON/STOP1 8BIT/NON/STOP2 8BIT/EVEN/STOP1 8BIT/EVEN/STOP2 8BIT/ODD/STOP1 8BIT/ODD/STOP2

 *1 Avoid duplication of the station No. with any of the other units.
 *2 Adjust the settings with GOT settings.

11.5.7 Connecting to AL3000, AH3000

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting.

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	MODBUS
Transmission code	rtu
Communication type	RS232C, RS-422A, RS-485
Station No.[*1]	1 to 31
Transmission speed[*2]	2400bps, 4800bps, 9600bps, 19200bps
Character[*2] (Bit length, Parity bit, Stop bit)	[8N1]: 8bit, None, 1bit [8N2]: 8bit, None, 2bit [8E1]: 8bit, Even, 1bit [8E2]: 8bit, Even, 2bit [8O1]: 8bit, Odd, 1bit [8O2]: 8bit, Odd, 2bit

 *1 Avoid duplication of the station No. with any of the other units.
 *2 Adjust the settings with GOT settings.

11.5.8 Connecting to SE3000

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting.

■ Communication settings
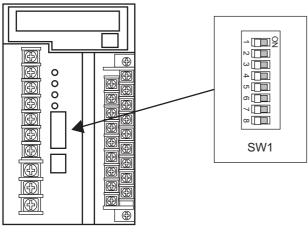

Make the communication settings using the engineering software package (PASS)

Item	Set value
Protocol	MODBUS RTU
Station No.[*1][*3]	1 to 31
Transmission speed[*2][*3]	9600bps, 19200bps
Data bit	8bits (fixed)
Parity bit[*2]	Even, Odd, Non
Stop bit[*2]	1bit, 2bits
Transmission code	Binary (fixed)
Error check	CRC-16 (fixed)

*1 Avoid duplication of the station No. with any of the other units.
*2 Adjust the settings with GOT settings.
*3 Station No. and Transmission speed can also be set by switch SW1.

■ Setting by Switch (SW1)

Station No. and Transmission speed can be set.

SW1
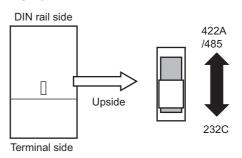

(1) Station No.

SW1-1	SW1-2	SW1-3	SW1-4	SW1-5	Station No.
OFF	OFF	OFF	OFF	OFF	1
ON	OFF	OFF	OFF	OFF	1
OFF	ON	OFF	OFF	OFF	2
ON	ON	OFF	OFF	OFF	3
:	:	:	:	:	:
ON	OFF	ON	ON	ON	29
OFF	ON	ON	ON	ON	30
ON	ON	ON	ON	ON	31

(2) Transmission speed

SW1-6	SW1-7	communication port	Transmission speed
OFF	OFF	Upper communication	9600bps
OFF	ON	Upper communication	19200bps
ON	OFF	ENG	-
ON	ON	User setting inhibited	

■ Setting by Switch (SW2)

DIN rail side

Upside

Terminal side

422A /485

232C

SW2	
Front side (Terminal side)	Rear side (DIN rail side)
RS232C	RS422A/485

11.5.9 Connecting to JU

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting.

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
Protocol	rtU
Station No.[*1]	1 to 99
Transmission speed[*2]	9600bps, 19200bps
Character[*2] (Bit length, Parity bit, Stop bit)	[8N1]: 8bit, None, 1bit [8N2]: 8bit, None, 2bit [8E1]: 8bit, Even, 1bit [8E2]: 8bit, Even, 2bit [8O1]: 8bit, Odd, 1bit [8O2]: 8bit, Odd, 2bit

*1 Avoid duplication of the station No. with any of the other units.
*2 Adjust the settings with GOT settings.

11.5.10 Connecting to KE3000

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting.

■ Communication settings

Make the communication settings by operating the switches SW2 and SW3 of the module.

(1) Setting by SW2

Item	Set value	SW2-2	SW2-3
Transmission code[*2]	MODBUS RTU	OFF	-
Transmission speed[*1]	9600bps	-	OFF
	19200bps	-	ON
Transmission character structure[*2]	8bits, None, 1bit (fixed)	-	-

> *1   Adjust the settings with GOT settings.
> *2   When the transmission code is MODBUS RTU, the setting of the transmission character structure is fixed.

(2) Setting by SW3

Set the station No. as follows.

SW3-4	SW3-5	SW3-6	SW3-7	SW3-8	Station No.[*1]
OFF	OFF	OFF	OFF	OFF	1
ON	OFF	OFF	OFF	OFF	1
OFF	ON	OFF	OFF	OFF	2
ON	ON	OFF	OFF	OFF	3
:					:
:					:
ON	OFF	ON	ON	ON	29
OFF	ON	ON	ON	ON	30
ON	ON	ON	ON	ON	31

> *1   Avoid duplication of the station No. with any of the other units.

11.5.11 Connecting to LE5000

■ Key Lock setting

To write the Digital and the Analog parameters, set the Key Lock setting.

■ Communication settings

Set the communication settings with controller key operation.

Item	Set value
RTU/ASCII	RTU
Station No.[*1]	1 to 99
Transmission speed[*2]	9600bps, 19200bps
Character[*2] (Bit length, Parity bit, Stop bit)	[8N1]: 8bit, None, 1bit [8N2]: 8bit, None, 2bit [8E1]: 8bit, Even, 1bit [8E2]: 8bit, Even, 2bit [8O1]: 8bit, Odd, 1bit [8O2]: 8bit, Odd, 2bit

> *1   Avoid duplication of the station No. with any of the other units.
> *2   Adjust the settings with GOT settings.

11.5.12 Connecting to converter SC8-10

■ Communication settings
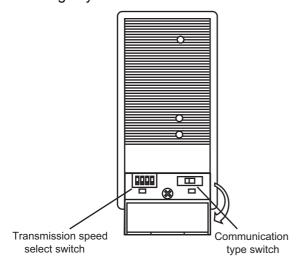

Make the communication settings using setting switches.

Item	Set value
Transmission speed select switch[1]	9600bps, 19200bps
Communication type switch	RS-485, RS-422

*1 Adjust the settings with GOT and controller settings.

■ Settings by switch

Transmission speed select switch

Communication type switch

(1) Transmission speed setting

Setting item	Set value	Switch No.			
		1	2	3	4
Transmission speed	9600bps	OFF	ON	OFF	OFF
	19200bps	OFF	OFF	ON	OFF

ON
1 2 3 4
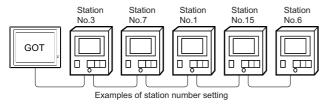

(2) Communication type setting

Setting item
RS-485/RS-422

RS-485 ←→ RS-422A

11.5.13 Station number setting

Set each station number so that no station number overlaps.

The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

Examples of station number setting

(1) Direct specification
   When setting the device, specify the station number of the controller of which data is to be changed.

| Model name	Specification range	Refer to
LT230, LT300, LT400, LT830	1 to 99	11.5.1 11.5.2
DZ1000, DZ2000	1 to 31	11.5.3
DB1000, DB2000	1 to 99	11.5.4
GT120	1 to 95	11.5.5
KP1000, KP2000	1 to 99	11.5.6
AL3000, AH3000	1 to 31	11.5.7
SE3000	1 to 31	11.5.8
JU	1 to 99	11.5.9
KE3000	1 to 31	11.5.10
LE5000	1 to 99	11.5.11

(2) Indirect specification
   When setting the device, indirectly specify the station number of the controller of which data is to be changed using the 16-bit GOT internal data register (GD10 to GD25).
   When specifying the station No. from 100 to 115 on GT Designer3, the value of GD10 to GD25 compatible to the station No. specification will be the station No. of the controller.

Specification station NO.	Compatible device	Setting range
100	GD10	
101	GD11	
102	GD12	
103	GD13	
104	GD14	1 to 99: LT230, LT300, LT400, LT830 DB1000, DB2000, KP1000, KP2000, JU, LE5000
105	GD15	
106	GD16	
107	GD17	1 to 31: DZ1000, DZ2000, AL3000 AH3000, KE3000, SE3000
108	GD18	
109	GD19	1 to 95: GT120
110	GD20	For the setting other than the above, error (dedicated device is out of range) will occur.
111	GD21	
112	GD22	
113	GD23	
114	GD24	
115	GD25	

(3) All station specification
   Target station differs depending on write-in operation or read-out operation.
   • For write-in operation, all station will be a target.
   • For read-out operation, only one station will be a target.
   • All station specification is not available for KE3000. Do not use the all station specification for systems which include KE3000.

11.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.
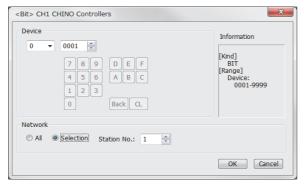

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information	Displays the device type and setting range which are selected in [Device].
Network	Set the monitor target of the set device.
	All	Select this item when writing data to all controllers connected. During monitoring, the controller which is set for [Host Address] of the communication detail settings is monitored. (When inputting data with the numerical input function, data is written to all the connected controllers during input. The controller set for [Host Address] is monitored during other than input (displaying).)
	Station No.	Select this item when monitoring the controller of the specified station No. After selecting, set the station No. of the controller in the following range. 1 to 99: To monitor the controller of the specified station No. 100 to 115: To specify the station No. of the controller to be monitored by the value of GOT data register (GD).[*1]

*1 The following shows the relation between station numbers of the controller and the GOT data register.

Station No.	GOT data register (GD)	Setting range
100	GD10	1 to 99 (If setting a value outside the range above, a device range error occurs.)
101	GD11	
:	:	
114	GD24	
115	GD25	

Device settings of CHINO controller
Devices are set with reference numbers.
For parameters corresponding to each reference number, refer to the manual of the controller to be used.

11.6.1 CHINO controller (CHINO Controllers)

Device name		Setting range	Device No. representation
Bit device	Digital parameter (0)	00001 to 09999	Decimal
	Digital input data (1)[*1]	10001 to 19999	
Word device	Analog input data (3)[*1]	30001 to 39999	Decimal
	Analog parameter (4)	40001 to 49999	

*1 Only reading is possible.

11.7 Precautions

■ **Station number settings of temperature controller**

In the system configuration, the controller with the station number set with the host address must be included.
For details of host address setting, refer to the following.

☞ 11.4.1 Setting communication interface (Communication settings)

■ **GOT clock control**

Since the controller does not have a clock function, the settings of [time adjusting] or [time broad cast] by GOT clock control will be disabled.

■ **Disconnecting some of multiple connected equipment**

The GOT can disconnect some of multiple connected equipment by setting GOT internal device.For example, the faulty station where a communication timeout error occurs can be disconnected from connected equipment.
For details of GOT internal device setting, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

12

CONNECTION TO TOSHIBA PLC

12. CONNECTION TO TOSHIBA PLC

12.1 Connectable Model List

      Use the connector compatible with the TOSHIBA
      PLC.
      For details, refer to the TOSHIBA PLC user's
      manual.

(3) Setting terminating resistors
  (a) GOT side
      Set the terminating resistor setting switch of the
      For details of terminating resistor settings, refer to
      the following.
      ☞1.4.3 Terminating resistors of GOT
  (b) TOSHIBA PLC side
      When connecting an TOSHIBA PLC to a GOT, a
      terminating resistor must be set to the TOSHIBA
      PLC.
      For the setting of the terminating resistor, refer to
      the following manual.
      ☞TOSHIBA PLC user's Manual
      • T2 (PU224), T2N, T3, T3H, model 3000 (S3)
        Connect the terminating resistor (1/2W-120Ω)
        across RXA and RXB.
      • T2E, model 2000 (S2, S2T)
        Short across the RXA and TERM terminals.

12.2.4 GOT Side Settings

■ Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   - Manufacturer: TOSHIBA
   - Controller Type: TOSHIBA PROSEC T/V
   - I/F: Interface to be used
   - Driver: TOSHIBA PROSEC T/V

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ ■ Communication detail settings

   Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.
☞ 1.1.2 I/F communication setting

■ Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	7 bit
Stop Bit	2 bit
Parity	Even
Retry(Times)	0
Timeout Time(Sec)	3
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 7bits)	7bit, 8bit
Stop Bit	Specify the stop bit length for communications. (Default: 2bit)	1bit, 2bit
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: Even)	None, Even, Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300 (ms)

POINT

(1) Communication interface setting by the Utility
   The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
   For details on the Utility, refer to the following manual.
   ☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
   When settings are made by GT Designer3 or the Utility, the latest setting is effective.

12.2.5 PLC Side Setting

POINT

TOSHIBA PLC

For details of the TOSHIBA PLC, refer to the following manual.

☞ TOSHIBA PLC user's Manual

Model name		Refer to
PLC CPU	T2 (PU224), T2E, T2N	12 - 8
	T3, T3H	12 - 8
	model 2000 (S2, S2T, S2E), model 3000 (S3)	12 - 8

■ Connecting to T2 (PU224), T2E or T2N

(1) Switch setting

Set the switches accordingly.

(a) Operation mode setting switch

OFF   ON
1 □
2 □
3 □
4 □
5 □
6 □

Switch No.	Settings	Setting details
4	OFF (fixed)	Computer link
5	OFF (fixed)	

(b) DIP switch on module PCB (T2N only)

Switch No.	Set value	
	For RS-232 communication	For RS-422 communication
DIP switch: No. 1	ON (RS-232C)	OFF (RS-485[*1])

*1   Can be used as RS-422.

(2) Transmission parameter setting

Enter the transmission parameters.

Item	Set value
Transmission speed[*1*2*3]	4800bps, 9600bps, 19200bps
Data bit	7bit
Stop bit	2bit
Parity bit	Even
Station No.	1

*1   Indicates only the transmission speeds that can be set on the GOT side.
*2   Fixed to 9600bps for T2E only.
*3   The transmission speed setting must be consistent with that of the GOT side.
       For the transmission speed setting on the GOT side, refer to the following.

☞ ■ Setting communication interface (Communication settings)

■ Connecting to T3 or T3H

Enter the transmission parameters.

Item	Set value
Transmission speed[*1*2]	4800bps, 9600bps, 19200bps
Data bit	7bit
Stop bit	2bit
Parity bit	Even
Station No.	1

*1   Indicates only the transmission speeds that can be set on the GOT side.
*2   The transmission speed setting must be consistent with that of the GOT side.
       For the transmission speed setting on the GOT side, refer to the following.

☞ ■ Setting communication interface (Communication settings)

■ Connecting to model 2000 (S2, S2T, S2E), model 3000 (S3)

Enter the transmission parameters.

Item	Set value
Transmission method	RS485[*1]
RS485	COM1
Timeout time	5sec
Transmission speed[*2*3]	4800bps, 9600bps, 19200bps
Data bit	7bit
Stop bit	2bit
Parity bit	Even
Station No.	1

*1   Can be used as RS-422.
*2   Indicates only the transmission speeds that can be set on the GOT side.
*3   The transmission speed setting must be consistent with that of the GOT side.
   For the transmission speed setting on the GOT side, refer to the following.

☞ ■ Setting communication interface (Communication settings)

12.3 Ethernet Connection

12.3.1 System configuration for connecting to Unified Controller nv Series

PLC		Connection cable		GOT		Number of connectable equipment
Series	Ethernet module*3	Cable model	Maximum segment length*2	Option device	Model	
Unified Controller nv Series	EN811	Twisted pair cable*1 • 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5 • 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e	100m	- (Built into GOT)	GT27 GT25 GT23	When PLC:GOT is N: 1 The number of PLCs for 1 GOT 32 or less When PLC:GOT is 1: N The number of GOTs for 1 PLC No limit number*4

*1 The destination connected with the twisted pair cable varies with the configuration of the applicable Ethernet network system.
   Connect to the Ethernet module, hub, transceiver or other system equipment corresponding to the applicable Ethernet network system.
   Use cables, connectors, and hubs that meet the IEEE802.3 10BASE-T/100BASE-TX standard.

*2 A length between a hub and a node.
   The maximum distance differs depending on the Ethernet device to be used.
   The following shows the number of the connectable nodes when a repeater hub is used.
   • 10BASE-T: Max. 4 nodes for a cascade connection (500m)
   • 100BASE-TX: Max. 2 nodes for a cascade connection (205m)
   When switching hubs are used, the cascade connection between the switching hubs has no logical limit for the number of cascades.
   For the limit, contact the switching hub manufacturer.

*3 Product manufactured by TOSHIBA Corporation. For details of the product, contact TOSHIBA Corporation.

*4 There is no restriction for the number of GOTs. However, if the number of GOTs increases, the communication becomes high-loaded, and it may affect the communication performance.

12.3.2 GOT side settings

■ Setting communication interface (Communication settings)

Set the channel of the connected equipment.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: TOSHIBA
   • Controller Type: TOSHIBA Unified Controller nv
   • I/F: Interface to be used
   • Driver: Ethernet (TOSHIBA nv), Gateway

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 12.3.2 ■ Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

■ Communication detail settings

Make the settings according to the usage environment.

Property	Value
GOT Net No.	1
GOT Station	1
GOT Standard Ethernet Setting	192.168.3.18
GOT Communication Port No.	5022
Retry(Times)	3
Startup Time(Sec)	3
Timeout Time(Sec)	3
Delay Time(ms)	0

Item	Description	Range
GOT Net No.	Set the network No. of the GOT. (Default: 1)	1 to 239
GOT Station[*1]	Set the station No. of the GOT. (Default: 1)	1 to 254
GOT Standard Ethernet Setting	Set the GOT IP address, subnet mask, default gateway, peripheral S/W communication port No., transparent port No.	☞ ■GOT Standard Ethernet Setting
GOT Communication Port No.	Set the GOT port No. for the connection with the Ethernet module. (Default: 5022)	1024 to 5010, 5014 to 65534 (Except for 5011 to 5013 and 49153 to 49170)
Retry	Set the number of retries to be performed when a communication timeout occurs. When receiving no response after retries, the communication times out. (Default: 3times)	0 to 5times
Startup Time	Specify the time period from the GOT startup until GOT starts the communication with the PLC CPU. (Default: 3sec)	3 to 255sec
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 90sec
Delay Time	Set the delay time for reducing the load of the network/ destination PLC. (Default: 0ms)	0 to 10000 (×10ms)

*1 Each of [GOT Station] set in the communication detail setting and [Station] set in the Ethernet setting must be set to different station numbers.

☞ ■ Ethernet setting

■ GOT Standard Ethernet Setting

Make the settings according to the usage environment.

Item	Description	Range
GOT IP Address	Set the IP address of the GOT. (Default: 192.168.3.18)	0.0.0.0 to 255.255.255.255
Subnet Mask	Set the subnet mask for the sub network. (Only for connection via router) If the sub network is not used, the default value is set. (Default: 255.255.255.0)	0.0.0.0 to 255.255.255.255
Default Gateway	Set the router address of the default gateway where the GOT is connected. (Only for connection via router) (Default: 0.0.0.0)	0.0.0.0 to 255.255.255.255
Peripheral S/W Communication Port No.	Set the GOT port No. for the S/W communication. (Default: 5015)	1024 to 5010, 5014 to 65534 (Except for 5011, 5012, 5013 and 49153)
Transparent Port No.	Set the GOT port No. for the transparent function. (Default: 5014)	1024 to 65534 (Except for 5011 to 5013 and 49153 to 49170)

*1 By setting of the OMRON PLC, set the same [GOT Communication Port No.] setting as that of [FINS UDP Port] of CX-Programmer.

■ Ethernet setting

Item	Description	Set value
Host	The host is displayed. (The host is indicated with an asterisk (*).)	-
N/W No.	Set the network No. of the connected Ethernet module. (Default: 1)	1 to 239
Station*1	Set the station No. of the connected Ethernet module. (Default: 1)	1 to 254
Type	TOSHIBA (fixed)	TOSHIBA (fixed)
IP Address	Set the IP address of the connected Ethernet module. (Default: 172.16.64.1)	PLC side IP address
Port No.	Set the port No. of the connected Ethernet module. (Default: 1024)	1024 to 65534
Communication format	UDP (fixed)	UDP (fixed)

*1 Each of [GOT Station] set in the communication detail setting and [Station] set in the Ethernet setting must be set to different station numbers.
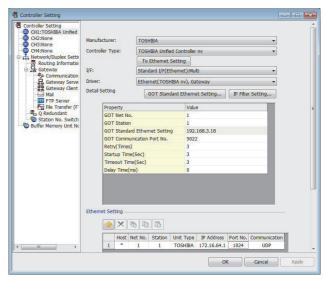

☞ ■ Communication detail settings

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication setting] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

■ IP Filter Setting

To improve security, the GOT 2000 series supports the IP Filter Setting.

For details on the IP Filter Setting, refer to the following manual.

☞ GT Designer3 (GOT2000) Screen Design Manual

12.3.3 PLC side setting

■ Setting of operation mode switch and station No. switch

STN

H

L

Station No. setting switch

MODE

ON

Operation mode setting switch

EN811

(1) Station No. setting switch

The station No. setting switches are hexadecimal rotary switches that determine the station No. on the Ethernet network.
Set the station address (1 to 254) that has been assigned upon system configuration in a HEX code.
Assign an address with a different value to each of the nodes in the system.

Switch name	Setting details	Setting range
STN-H	Upper address : 0 to F (Hex.)	01 to FE (Hex.)
STN-L	Lower address : 0 to F (Hex.)	

(2) Operation mode setting switch

(a) Operation mode

| Switch No.	Settings		
1	OFF	ON	OFF
2	OFF	OFF	ON
3	OFF	OFF	OFF
Operation mode	Normal	For maintenance	

Switch No.	Settings
4	Not in use
5	

(b) IP address type

Switch No.	Settings			
6	OFF	OFF	OFF	ON
7	OFF	ON	OFF	ON
8	OFF	OFF	ON	ON
Operation mode	Class B 172.16.64.XX	Reserved	Class C 192.168.0.XX	Tool setting

- Class B 172.16.64.XX
  XX indicates the value of the station No. setting switches.
  Subnet mask : 255.255.192.0
- Class B 192.168.0.XX
  XX indicates the value of the station No. setting switches.
  Subnet mask : 255.255.255.0
- Tool setting
  It can be set freely from the engineering tool, and the value has precedence over the value of the station No. setting switches.

12.3.4 Precautions

■ Delay of device communication

Note that if a non-existent station, or a station which power is turned OFF is monitored, the communication of normal stations is also delayed.

■ Redundant system

When configuring a redundant system, the "Multicast address setting" for the configured PLC pair (System A: Primary, System B: Secondary) is required.

12.4 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.
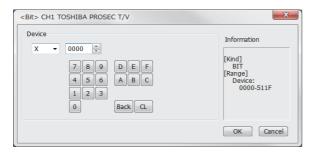

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.
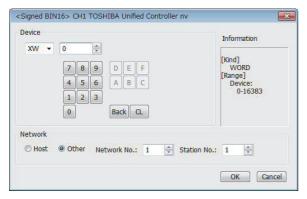

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

(1) Setting item

TOSHIBA PROSEC T/V Series
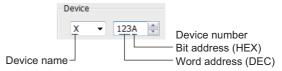

TOSHIBA Unified Controller nv Series

Item		Description
Device		Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information		Displays the device type and setting range which are selected in [Device].
Network		Set the station number of the controller to be monitored.
	Host	Select this item for monitoring the host controller.
	Other	Select this for monitoring other controllers. After selecting the item, set the station number of the controller to be monitored. NW No.: Set the network No. Station No.: Set the station No.

POINT
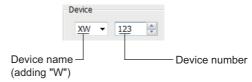

(1) Device settings of TOSHIBA PLC
   (a) When setting a relay as a bit device
       Set the device using the format of word address (DEC) + bit address (HEX).

   (b) When setting a relay as a word device
       Set the device using the format of word address (DEC).
       For the device name setting, enter "w" before the bit device name.

(2) Notation of device address (when using PROSEC V series)
    The notation of device address setting is different between the TOSHIBA PLC peripheral software and GOT.
    For the difference of notations between peripheral softwares and GOT, refer to the following.

☞ ■ TOSHIBA PLC (TOSHIBA PROSEC T/V Series)

■ TOSHIBA PLC
(TOSHIBA PROSEC T/V Series)

	Device name	Setting range	Device No. representation
Bit device	External input (X)	X0000 to X511F	Hexadecimal
	External output (Y)	Y0000 to Y511F	
	Internal relay (R)[*7]	R0000 to R4095F	
	Special relay (S)[*7]	S0000 to S511F	
	Link register relay (Z)	Z0000 to Z999F	
	Link relay (L)	L0000 to L255F	
	Timer (Contact) (T)[*1]	T0 to T999	Decimal
	Counter (Contact) (C)[*1]	C0 to C511	
	The bit specification of the word device[*2*5*7] (except external input, external output, internal relay, special relay link relay, timer and counter)	Setting range of each word device	-
Word device	External input (XW)	XW0 to XW511	Decimal
	External output (YW)	YW0 to YW511	
	Internal relay (RW)[*6*8]	RW0 to RW4095	
	Special relay (SW)[*8]	SW0 to SW511	
	Link relay (LW)	LW0 to LW255	
	Timer (Current value) (T)[*1]	T0 to T999	
	Counter (Current value) (C)[*1]	C0 to C511	
	Data register (D) [*3*6*8]	D0 to D8191	
	Link register (W)	W0 to W2047	
	File register (F)[*4]	F0 to F32767	

PROSEC T Series
*1   The writing of the timer (contact)/(current value) and counter (contact)/(current value) are executed after being read by the GOT. Therefore, do not edit it in the sequence program during this period.
*2   As bit specification of a word device is performed after the GOT reads the value, do not change the value in the sequence program during this period.
*3   When the mode switch on the CPU module is set to "P-RUN", writing to D0000 through D4095 is disabled.
*4   Extension file register is not supported.

PROSEC V Series
*5   As bit specification of a word device is performed after the GOT reads the value, do not change the value in the sequence program during this period.
*6   RW0000 and D0000 indicate the data register in the same region although they are shown in different notations.
*7   For bit data, the conversion from the address notation for the TOSHIBA PLC to that for the GOT is shown as follows. Address notation for TOSHIBA PLC ÷ 16=Word address (Quotient)...Bit address (Remainder)

Address notation for TOSHIBA PLC	Address notation for GOT	Conversion
S8191	S511F (Decimal) (Hexadecimal)	8191÷16= 511...15
R65535	R4095F (Decimal) (Hexadecimal)	65535÷16= 4095...15

Communication format		Address notation for TOSHIBA PLC	Address notation for GOT
16bit data		DW10	D10
32bit data	(Integer)	DD10 (Calculate the device No. in 32-bit unit)	D20
	(Real number)	DF10 (Calculate the device No. in 32-bit unit)	D20

■ TOSHIBA PLC
(Unified Controller nv Series)

	Device name	Setting range	Device No. representation
Bit device	External input (X)	X000000 to X16383F	Decimal +Hexadecimal
	External input (X)	Y000000 to Y16383F	
	Internal relay (R)	R00000 to R8191F	
	Input variable (I)	I000000 to I16383F	
	Output variable (Q)	Q000000 to Q16383F	
	Special relay (S)	S00000 to S1023F	
Word device	External input (XW)	XW0 to XW16383	Decimal
	External output (YW)	YW0 to YW16383	
	Internal relay (RW)	RW0 to RW8191	
	Special relay (SW)	SW0 to SW1023	
	Data register (D)	D0 to D8191	Decimal
	File register (F)	F0 to F32767	
	Input variable (IW)	IW0 to IW16383	
	Output variable (QW)	QW0 to QW16383	
	User global (UG)	UG0 to UG262143

*1   Pin No. of PLC side differs depending on the model. Refer to the following table.

Signal name	Model of PLC			
	TC5-02		TC5-03	
	CN24A	CN24B	CN14	CN18
	Pin No.	Pin No.	Pin No.	Pin No.
A	1	1	3	3
B	2	2	4	4
GND	3	3	5	5

*2   For the PLC side terminating resistor, refer to the following.

☞ PLC user's Manual to be used

*3   Set the terminating resistor of GOT side, which will be a terminal, to "110Ω".

☞ 1.4.3 Terminating resistors of GOT

*4   The signals RSA, RSB, CSA, and CSB are not provided for ![GT21 03P 04P ET/R4].

*1   Pin No. of PLC side differs depending on the model. Refer to the following table.

Signal name	Model of PLC			
	TC5-02		TC5-03	
	CN24A	CN24B	CN14	CN18
	Pin No.	Pin No.	Pin No.	Pin No.
A	1	1	3	3
B	2	2	4	4
GND	3	3	5	5

*2   For the PLC side terminating resistor, refer to the following.

☞ PLC user's Manual to be used

*3   Set the terminating resistor of GOT side, which will be a terminal, to "Enable".

☞ 1.4.3 Terminating resistors of GOT

■ Precautions when preparing a cable

(1) Cable length

The length of the RS-485 cable must be 400m or less.

(2) GOT side connector

For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(3) PLC side connector

Use the connector compatible with the PLC side.
For details, refer to the PLC user's Manual to be used.

■ Connecting terminating resistors

(1) GOT side

When connecting a PLC to the GOT, a terminating
resistor must be connected to the GOT.

    (a) For GT27, GT25, GT23

        Set the terminating resistor using the terminating
        resistor setting switch.

    (b) For GT21

        Set the terminating resistor using the terminating
        resistor selector.

For the procedure to set the terminating resistor, refer
to the following.

☞ 1.4.3 Terminating resistors of GOT

(2) PLC side

When connecting a PLC to the GOT, a terminating
resistor must be connected to the PLC.
For details, refer to the PLC user's Manual to be used.

13.4 GOT Side Settings

13.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: TOSHIBA MACHINE
   • Controller Type: TOSHIBA MACHINE TCmini
   • I/F: Interface to be used
   • Driver: TOSHIBA MACHINE TCmini

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 13.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.

☞ 1.1.2 I/F communication setting

13.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	2 bit
Parity	None
Retry(Times)	3
Timeout Time(Sec)	3
Host Address	0
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bit)	7bits/8bits
Stop Bit	Specify the stop bit length for communications. (Default: 2bits)	1bit/2bits
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: None)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default: 3times)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address	Specify the host address (station No. of the GOT to which the PLC is connected) in the connected network. (Default: 0)	0 to 63
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300 (ms)

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

CONNECTION TO TOSHIBA MACHINE PLC

13

13.5 PLC Side Setting

TOSHIBA MACHINE PLC

For details of the TOSHIBA MACHINE PLC, refer to the following manual.

☞ TOSHIBA MACHINE PLC user's Manual

Model name		Refer to
PLC CPU	TC3, TC8	13.5.1
	TC5	13.5.2
	TC6	13.5.3
Robot controller	TS2000, TS2100	13.5.4

13.5.1 Connecting to TC3, TC8 series

No communication settings.

Communication is available using default value of the PLC.

13.5.2 Connecting to TC5 series

The setting of transmission speed is changeable.
Set the following Generic register 1(D) using engineering tool.

The communication may not work properly if the settings are made using the GOT.

Generic register 1	Description	Set value
D37F	Mode setting	3: Host communication connection mode
D37E	Transmission speed[*1]	0: 9600bps 1: 19200bps 2: 38400bps
-	Data bit	8bits (fixed)
-	Parity bit	None (fixed)
-	Stop bit	2bits (fixed)

*1 Adjust the settings with GOT settings.
For the transmission speed setting on the GOT side, refer to the following.

☞ 13.4.1 Setting communication interface (Communication settings)

13.5.3 Connecting to TC6 series

The setting of transmission speed is changeable.
Set the following Special AUX Relay(A) using engineering tool.

The communication may not work properly if the settings are made using the GOT.

Transmission speed[*1]	Special AUX Relay		
	A158	A159	A15A
9600bps	OFF	OFF	OFF
19200bps	ON	OFF	OFF
38400bps	-	ON	OFF
57600bps	-	OFF	ON
115200bps	-	ON	ON

*1 The transmission speed setting must be consistent with that of the GOT side.
For the transmission speed setting on the GOT side, refer to the following.

☞ 13.4.1 Setting communication interface (Communication settings)

13.5.4 Connecting to TS2000, TS2100

No communication settings.

Communication is available using the default value of the robot controller.

13. CONNECTION TO TOSHIBA MACHINE PLC
13.5 PLC Side Setting

13.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.
Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.
The device specifications of controllers may differ depending on the models, even though belonging to the same series.
Please make the setting according to the specifications of the controller actually used.
When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information	Displays the device type and setting range which are selected in [Device].

POINT

(1) Device settings for TOSHIBA MACHINE PLC

(a) When setting relay address or word register address as bit device
Set the device No. with the rack No. (Hex), module position (Octal), and terminal No. (Hex), in that order.

Device name
Device number
Terminal No. (hex)
Module position (octal)
Rack No. (hex)

(b) When setting a relay address as a word device
Set the device No. with the rack No. (Hex) and module position (Octal), in that order.
For the device name setting, enter "w" before the bit device name.

Device name
(Bit device name with "W")
Device number
Module position (octal)
Rack No. (hex)

13.6.1 TOSHIBA MACHINE PLC (TOSHIBA MACHINE TCmini)

	Device name	Setting range			Device No. representation
Bit device	Input relay 1 (X)	X000	to	XF7F	Hexadecimal + Octal + Hexadecimal
	Input relay 2 (I)	I000	to	IF7F	
	Output relay 1 (Y)	Y000	to	YF7F	
	Output relay 1 (O)	O000	to	OF7F	
	Internal relay (R)	R000	to	R77F	
	Extended internal relay 1 (GR)	GR000	to	GRF7F	
	Extended internal relay 2 (H)	H000	to	HF7F	
	Extended internal relay 3 (J)	J000	to	JF7F	
	Extended internal relay 4 (K)	K000	to	KF7F	
	Timer (Contact) (T)	T000	to	T77F	
	Counter (Contact) (C)	C000	to	C77F	
	Shift relay (S)	S000	to	S07F	
	Latch relay (L)	L000	to	L07F	
	Edge relay (E)	E000	to	E77F	
	Special auxiliary relay (A)	A000	to	A16F	
Word device	Input register 1 (XW)	XW00	to	XWF7	Hexadecimal + Octal
	Input register 2 (IW)	IW00	to	IWF7	
	Output register 1 (YW)	YW00	to	YWF7	
	Output register 2 (OW)	OW00	to	OWF7	
	Internal register (RW)	RW00	to	RW77	
	Extended internal register 1 (GW)	GW00	to	GWF7	
	Extended internal register 2 (HW)	HW00	to	HWF7	
	Extended internal register 3 (JW)	JW00	to	JWF7	
	Extended internal register 4 (KW)	KW00	to	KWF7	
	Timer (Contact) register (TW)	TW00	to	TW77	
	Counter (Contact) register (CW)	CW00	to	CW77	
	Shift register (SW)	SW00	to	SW07	
	Latch register (LW)	LW00	to	LW07	
	Edge register (EW)	EW00	to	EW77	
	Special auxiliary register (AW)	AW00	to	AW16	Hexadecimal + Octal + Hexadecimal
	Generic register 1 (D)	D000	to	DF7F	
	Generic register 2 (B)	B000	to	BF7F	
	Generic register 3 (U)	U000	to	UF7F	
	Generic register 4 (M)	M000	to	MF7F	
	Generic register 5 (Q)	Q000	to	QF7F	
	Timer/Counter current value (P)	P000	to	P77F	
	Timer/Counter set value (V)	V000	to	V77F+

14. CONNECTION TO PANASONIC SERVO AMPLIFIER
14.3 Connection Diagram

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-485 cable must be 1m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.
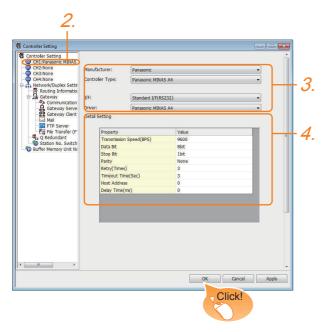

☞ 1.4.1 GOT connector specifications

(3) PANASONIC servo amplifier side connector
Use the connector compatible with the PANASONIC servo amplifier.

For details, refer to the user's manual of the PANASONIC servo amplifier.

■ Connecting terminating resistors

(1) GOT side
Set the terminating resistor setting switch of the GOT main unit to "Disable".
For details of terminating resistor settings, refer to the following.
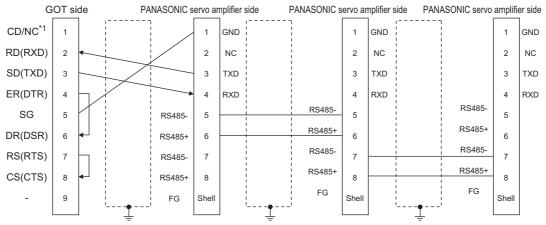

☞ 1.4.3 Terminating resistors of GOT

14.3.3 RS-232/RS-485 cable

■ Connection diagram

*1 GT27:CD, GT23:NC

■ Precautions when preparing a cable

(1) Cable length
• The length of the cable between GOT and MINAS must be 2m or less.
• The length of the cable between MINAS and MINAS must be 1m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.

☞ 1.4.1 GOT connector specifications

(3) PANASONIC servo amplifier side connector
Use the connector compatible with the PANASONIC servo amplifier.
For details, refer to the user's manual of the PANASONIC servo amplifier.

14.4 GOT Side Settings

14.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

2.

Click!

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   • Manufacturer: PANASONIC
   • Controller Type: Set the option according to the Controller Type to be connected.
      • PANASONIC MINAS-A4 series
      • PANASONIC MINAS-A5 series
   • I/F: Interface to be used
   • Driver: Depends on the model to be used.
      • PANASONIC MINAS-A4
      • PANASONIC MINAS-A5

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.
   ☞ 14.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting].
For details, refer to the following.
☞ 1.1.2 I/F communication setting

14.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	1 bit
Parity	None
Retry(Times)	3
Timeout Time(Sec)	3
Host Address	0
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bit/8bit
Stop Bit	Specify the stop bit length for communications. (Default: 1bit)	1bit/2bit
Parity	Specify whether or not to perform a parity check, and how it is performed during communication. (Default: None)	None Even Odd
Retry	Set the number of retries to be performed when a communication error occurs. (Default:3times)	0 to 5times
Timeout Time[1]	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address	Specify the station No. of the servo amplifier to connect the GOT. (Default: 0)	0 to 31
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300ms

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

14.5 Servo Amplifier Side Setting

PANASONIC Servo Amplifier

For details of the PANASONIC Servo Amplifier, refer to the following manual.

☞ PANASONIC Servo Amplifier user's Manual

14.5.1 Connecting to MINAS A4/A4F/ A4L

■ MINAS A4/A4F/A4L communication settings

Set them from the main unit front panel of MINAS A4/A4F/A4L or using the setup support software.

Pr No.	Set value
Address of axis (Parameter No.00)	0 to 15
Baud rate setup of RS232[1] (Parameter No.0C)	2:9600bps 3:19200bps 4:38400bps 5:57600bps
Baud rate setup of RS485[1] (Parameter No.0D)	2:9600bps 3:19200bps 4:38400bps 5:57600bps

[1] Only transmission speeds available on the GOT side are shown. Adjust the settings with GOT settings.

Axis name setting

• The axis name is determined according to the rotary switch ID set value when the power supply to the servo amplifier is turned on. This value will be the station number (axis number) during communication.
• The axis name setting can be changed only with the rotary switch ID.

14.5.2 Connecting to MINAS A5

■ MINAS A5 communication settings

Set them from the main unit front panel of MINAS A5 or using the setup support software.

Pr No.	Set value
Address of axis (Parameter No.00)	0 to 31
Baud rate setup of RS232[1] (Parameter No.5.29)	2:9600bps 3:19200bps 4:38400bps 5:57600bps
Baud rate setup of RS485[1] (Parameter No.5.30)	2:9600bps 3:19200bps 4:38400bps 5:57600bps

[1] Only transmission speeds available on the GOT side are shown. Adjust the settings with GOT settings.
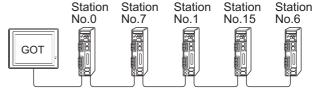

14.5.3 Station number setting

Set each station number so that no station number overlaps.

The station number can be set without regard to the cable connection order. There is no problem even if station numbers are not consecutive.

• When connecting the GOT and servo amplifier with RS-232
Set the station number (axis number) of the servo amplifier connected to the GOT to 0. Set the station numbers (axis numbers) of other servo amplifiers connected to the GOT to other than 0.
• When connecting the GOT and servo amplifier with RS-485
The GOT will be the station number (axis number) 0. Set the station numbers (axis numbers) of other connected servo amplifiers to other than 0.

Example of RS-232 connection between GOT-servo amplifier

Examples of station number setting

(1) Direct specification

When setting the device, specify the station number of the servo amplifier of which data is to be changed.

Model name	Specification range
MINAS A4, MINAS A4F, MINAS A4L	0 to 15
MINAS A5	0 to 31

(2) Indirect specification

When setting the device, indirectly specify the station number of the inverter of which data is to be changed using the 16-bit GOT internal data register (GD10 to GD25).

When specifying the station No. from 100 to 115 on drawing software, the value of GD10 to GD25 compatible to the station No. specification will be the station No. of the servo amplifier.

Specification Station No.	Compatible device	Setting range
100	GD10	
101	GD11	
102	GD12	
103	GD13	
104	GD14	
105	GD15	• MINAS A4, MINAS A4F, MINAS A4L
106	GD16	0 to 15
107	GD17	• MINAS A5
108	GD18	0 to 31
109	GD19	For the setting other than the above, a communication
110	GD20	timeout error will occur.
111	GD21	
112	GD22	
113	GD23	
114	GD24	
115	GD25	

14.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.

Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.

The device specifications of controllers may differ depending on the models, even though belonging to the same series.

Please make the setting according to the specifications of the controller actually used.

When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item		Description
Device		Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information		Displays the device type and setting range which are selected in [Device].
Network		Set the monitor target of the set device.
	Station No.	Set this item when monitoring the Servo amplifier of the specified station No.

14.6.1 PANASONIC servo amplifier (PANASONIC MINAS-A4 Series)

	Device name[1]	Setting range	Device No. representation
Bit device	Status (STS)[2]	STS0 to STS7	Decimal
	Input signal (INP)[2]	INP0 to INP31	
	Output signal (OTP)[2]	OTP0 to OTP47	
	Absolute encoder (Status)(AEST)[2]	AEST0 to AEST15	
	Writing of parameter to EEPROM (EPRW)[3]	EPRW0	
	Clear of user alarm history (in EEPROM as well) (ALHC)[3]	ALHC0	
	Alarm clear (ALMC)[3]	ALMC0	
	Absolute clear (ABSC)[3]	ABSC0	
Word device	Status (Control modes) (STCM)[2]	STCM0	Decimal
	Present speed (SPD)[2]	SPD0	
	Present torque output (TRQ)[2]	TRQ0	
	Absolute encoder (Encoder ID)(AEID)[2]	AEID0	
	Absolute encoder (Multi-turn data)(AEMD)[2]	AEMD0	
	Parameter (PRM)	PRM0000 to PRM007F	Hexa-decimal
	Present alarm data (ALM)[2]	ALM0	Decimal
	user alarm history (ALHI)[2]	ALHI1 to ALHI14	
	User parameter (MIN. value) (PRMN)[2]	PRMN0000 to PRMN007F	Hexa-decimal
	User parameter (MAX. value) (PRMX)[2]	PRMX0000 to PRMX007F	
	User parameter (Property)(PRPR)[2]	PRPR0000 to PRPR007F	
Double word device	Feedback pulse counter (FBPC)[2]	FBPC0	Decimal
	Present deviation counter (DVC)[2]	DVC0	
	Absolute encoder (Single turn data)(AESD)[2]	AESD0	
	External scale deviation and sum of pulses (ESA)[2]	ESA0 to ESA1	

[1] The GOT cannot read or write data from/to consecutive devices.
[2] Only reading is possible.
[3] Only writing is possible.

14.6.2 PANASONIC servo amplifier (PANASONIC MINAS-A5 Series)

Device name[1]	Setting range	Device No. representation
Status (STS)[2]	STS0 to STS7	Decimal
Input signal (INP)[2]	INP0 to INP31	
Output signal (OTP)[2]	OTP0 to OTP47	
Absolute encoder (Status)(AEST)[2]	AEST0 to AEST15	
Writing of parameter to EEPROM (EPRW)[3]	EPRW0	
Clear of user alarm history (in EEPROM as well) (ALHC)[3]	ALHC0	
Alarm clear (ALMC)[3]	ALMC0	
Absolute clear (ABSC)[3]	ABSC0	
Status (Control modes) (STCM)[2]	STCM0	Decimal
Present speed (SPD)[2]	SPD0	
Present torque output (TRQ)[2]	TRQ0	
Absolute encoder (Encoder ID)(AEID)[2]	AEID0	
Absolute encoder (Multi-turn data)(AEMD)[2]	AEMD0	
Parameter (Class 0)(PRM0)	PRM00 to PRM017	
Parameter (Class 1)(PRM1)	PRM10 to PRM127	
Parameter (Class 2)(PRM2)	PRM20 to PRM223	
Parameter (Class 3)(PRM3)	PRM30 to PRM329	
Parameter (Class 4)(PRM4)	PRM40 to PRM442	
Parameter (Class 5)(PRM5)	PRM50 to PRM535	
Parameter (Class 6)(PRM6)	PRM60 to PRM639	
Present alarm data (ALM)[2]	ALM0	
Present alarm data (Sub) (ALMS)[2]	ALMS0	Decimal
user alarm history (ALHI)[2]	ALHI1 to ALHI14	
user alarm history (Sub)(ALHI)[2]	ALHS1 to ALHS14	
User parameter (Class 0, MIN. value)(PRMN0)[2]	PRMN00 to PRMN017	
User parameter (Class 1, MIN. value)(PRMN1)[2]	PRMN10 to PRMN127	
User parameter (Class 2, MIN. value)(PRMN2)[2]	PRMN20 to PRMN223	
User parameter (Class 3, MIN. value)(PRMN3)[2]	PRMN30 to PRMN329	
User parameter (Class 4, MIN. value)(PRMN4)[2]	PRMN40 to PRMN442	
User parameter (Class 5, MIN. value)(PRMN5)[2]	PRMN50 to PRMN535	
User parameter (Class 6, MIN. value)(PRMN6)[2]	PRMN60 to PRMN639	

Device name[1]	Setting range	Device No. representation
User parameter (Class 0, MAX. value)(PRMX0)[2]	PRMX00 to PRMX017	Decimal
User parameter (Class 1, MAX. value)(PRMX1)[2]	PRMX10 to PRMX127	
User parameter (Class 2, MAX. value)(PRMX2)[2]	PRMX20 to PRMX223	
User parameter (Class 3, MAX. value)(PRMX3)[2]	PRMX30 to PRMX329	
User parameter (Class 4, MAX. value)(PRMX4)[2]	PRMX40 to PRMX442	
User parameter (Class 5, MAX. value)(PRMX5)[2]	PRMX50 to PRMX535	
User parameter (Class 6, MAX. value)(PRMX6)[2]	PRMX60 to PRMX639	
User parameter (Class 0, Property)(PRPR0)[3]	PRPR00 to PRPR017	
User parameter (Class 1, Property)(PRPR1)[3]	PRPR10 to PRPR127	
User parameter (Class 2, Property)(PRPR2)[3]	PRPR20 to PRPR223	
User parameter (Class 3, Property)(PRPR3)[3]	PRPR30 to PRPR329	Decimal
User parameter (Class 4, Property)(PRPR4)[3]	PRPR40 to PRPR442	
User parameter (Class 5, Property)(PRPR5)[3]	PRPR50 to PRPR535	
User parameter (Class 6, Property)(PRPR6)[3]	PRPR60 to PRPR639	
Feedback pulse counter (FBPC)[2]	FBPC0	
Present deviation counter (DVC)[2]	DVC0	
Absolute encoder (Single turn data)(AESD)[2]	AESD0	
External scale deviation and sum of pulses (ESA)[2]	ESA0 to ESA1	

[1] The GOT cannot read or write data from/to consecutive devices.
[2] Only reading is possible.
[3] Only writing is possible.

14.7 Precautions

■ Station number setting in the servo system

Configure the servo system so that there is a servo amplifier with a station number set with a host address. For details of host address setting, refer to the following manual.

☞ 14.4.2 Communication detail settings

■ Monitor speed

When monitoring multiple station devices placed on the same GOT screen, the monitor speed is slow. Even when monitoring a single station, the monitor speed is slow if the device points is large.

■ Mixing of MINAS A4 series and MINAS A5 series

MINAS A4 series and MINAS A5 series cannot be mixed. The multiple MINAS A4 series can be used together.

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-232 cable must be 15m or less. The length of the cable must be 3m or less with a transmission speed of 38400bps.

(2) GOT side connector
For the GOT side connector, refer to the following.
☞ 1.4.1 GOT connector specifications
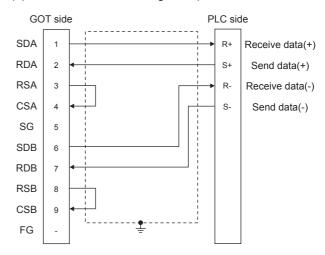

(3) Connector for Panasonic Industrial Devices SUNX PLC
Use the connector applicable to the Panasonic Industrial Devices SUNX PLC.
For details, refer to the Panasonic Industrial Devices SUNX PLC user's manual.
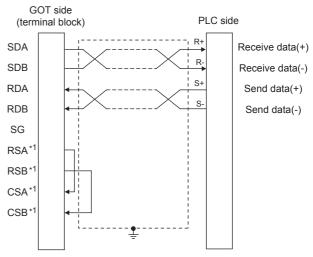

15.3.2 RS-422 cable

■ Connection diagram

(1) RS-422 connection diagram 1)

(2) RS-422 connection diagram 2)

*1 The signals RSA, RSB, CSA, and CSB are not provided for GT21 03P 04P E1/R4 .
Return connection is not required.

■ Precautions when preparing a cable

(1) Cable length
The length of the RS-422 cable must be 1200m or less.

(2) GOT side connector
For the GOT side connector, refer to the following.
☞ 1.4.1 GOT connector specifications

(3) Connector for Panasonic Industrial Devices SUNX PLC
Use the connector applicable to the Panasonic Industrial Devices SUNX PLC.
For details, refer to the Panasonic Industrial Devices SUNX PLC user's manual.

■ Connecting terminating resistors
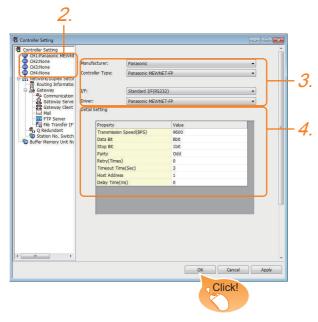

(1) GOT side
  (a) For GT27, GT25, GT23
       Set the terminating resistor setting switch of the
       GOT main unit to "Disable".
  (b) For GT21
       Set the terminating resistor selector to "330Ω".
  For details of terminating resistor settings, refer to the
  following.

  ☞ 1.4.3 Terminating resistors of GOT

15.4 GOT Side Settings

15.4.1 Setting communication interface (Communication settings)

Set the channel of the equipment to be connected to the GOT.

1. Select [Common] → [Controller Setting] from the menu.

2. The Controller Setting window is displayed. Select the channel to be used from the list menu.

3. Set the following items.
   - Manufacturer: Panasonic
   - Controller Type: Panasonic MEWNET-FP
   - I/F: Interface to be used
   - Driver: Panasonic MEWNET-FP

4. The detailed setting is displayed after Manufacturer, Controller Type, I/F, and Driver are set.
   Make the settings according to the usage environment.

   ☞ 15.4.2 Communication detail settings

Click the [OK] button when settings are completed.

POINT

The settings of connecting equipment can be confirmed in [I/F Communication Setting]. For details, refer to the following.

☞ 1.1.2 I/F communication setting

15.4.2 Communication detail settings

Make the settings according to the usage environment.

Property	Value
Transmission Speed(BPS)	9600
Data Bit	8 bit
Stop Bit	1 bit
Parity	Odd
Retry(Times)	0
Timeout Time(Sec)	3
Host Address	1
Delay Time(ms)	0

Item	Description	Range
Transmission Speed	Set this item when change the transmission speed used for communication with the connected equipment. (Default: 9600bps)	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data Bit	Set this item when change the data length used for communication with the connected equipment. (Default: 8bits)	7bits/8bits
Retry	Set the number of retries to be performed when a communication timeout occurs. When receiving no response after retries, the communication times out. (Default: 0time)	0 to 5times
Timeout Time	Set the time period for a communication to time out. (Default: 3sec)	1 to 30sec
Host Address	Specify the host address (station No. of the PLC to which the GOT is connected) in the network of the GOT. (Default: 1)	1 to 31
Delay Time	Set this item to adjust the transmission timing of the communication request from the GOT. (Default: 0ms)	0 to 300 (ms)

POINT

(1) Communication interface setting by the Utility
The communication interface setting can be changed on the Utility's [Communication Settings] after writing [Communication Settings] of project data.
For details on the Utility, refer to the following manual.

☞ GOT2000 Series User's Manual (Utility)

(2) Precedence in communication settings
When settings are made by GT Designer3 or the Utility, the latest setting is effective.

15.5 PLC Side Setting

Panasonic Industrial Devices SUNX PLC

For details of the Panasonic Industrial Devices SUNX PLC, refer to the following manual.

☞ Panasonic Industrial Devices SUNX PLC user's Manual

■ Connecting to the tool port of the PLC CPU

Item	Set value
Transmission speed[*1]	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data bit	7bit, 8bit
Stop bit	1bit
Parity bit	Odd
Modem connection	No
Module No.	1

*1 Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 15.4.1 Setting communication interface (Communication settings)

The setting range varies with the connected PLC.

■ Connecting to the RS232C and COM port of the PLC CPU

Item	Set value
Transmission speed[*1]	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Data bit	7bit, 8bit
Stop bit	1bit
Parity bit	Odd
Modem connection	No
Serial port action selection[*2]	1 (Computer link)
Module No.	1

*1 Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 15.4.1 Setting communication interface (Communication settings)

The setting range varies with the connected PLC.
*2 Set when connecting to FP0, FP1, FP2 or FP-M.

■ Connecting to the computer communication unit

Item	Set value
Transmission speed[*1]	4800bps, 9600bps, 19200bps
Data bit	7bit, 8bit
Stop bit	1bit
Parity bit	Odd
Parity check	Yes
Control signal	Invalidate CS, CD

*1 Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 15.4.1 Setting communication interface (Communication settings)

The setting range varies with the connected PLC.

■ Connecting to the communication cassette

(1) Communication settings
Set the communication settings for the COM 1 port and COM2 port to connect GOT.

Item	Set value
Communication mode	Computer link
Transmission speed[*1]	4800bps, 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Modem connection	No
Data bit	7bit, 8bit
Parity check	Odd
Stop bit	1bit
Unit No.	1
Port selection[*2]	Communication cassette

*1 Indicates only the transmission speeds that can be set on the GOT side.
Set the same transmission speed of the GOT.
For the transmission speed setting on the GOT side, refer to the following.

☞ 15.4.1 Setting communication interface (Communication settings)
*2 Set the COM2 port only.

(2) Switch setting on the Communication cassette (AFPX-COM3)
Set the switch on the back.

| Switch No.	Setting	Setting details	
1	OFF	RS422	1 □ ON
2	OFF		2 □
3	OFF		3 □
4	OFF	Terminating resistor OFF	4 □

15.6 Device Range that Can Be Set

The device ranges of controller that can be used for GOT are as follows.
Note that the device ranges in the following tables are the maximum values that can be set in GT Designer3.
The device specifications of controllers may differ depending on the models, even though belonging to the same series.
Please make the setting according to the specifications of the controller actually used.
When a non-existent device or a device number outside the range is set, other objects with correct device settings may not be monitored.

■ Setting item

Item	Description
Device	Set the device name, device number, and bit number. The bit number can be set only when specifying the bit of word device.
Information	Displays the device type and setting range which are selected in [Device].

POINT

Device settings of PANASONIC PLC

(1) When setting a contact as a bit device
Set the device using the format of word address (DEC) + bit address (HEX).

Device name
Device number
Bit address (HEX)
Word address (DEC)

(2) When setting a contact as a word device
Set the device number.
Enter "W" before the device name, not including the bit address.

Device name
("W" added)
Device number

15.6.1　Panasonic Industrial Devices SUNX PLC (Panasonic MEWNET-FP) *1

	Device name	Setting range			Device No. representation
Bit device	Input relay (X)*2*3	X0000	to	X511F	Decimal + Hexadecimal
	Output relay (Y)*3	Y0000	to	Y511F	
	Internal relay (R)	R0000	to	R886F	
	Special relay (R)*2	R9000	to	R911F	
	Link relay (L)*5	L0000	to	L639F	
	Timer contact (T)*2*4	T0	to	T3071	Decimal
	Counter contact (C)*2*4	C0	to	C3071	
	Word device bit	Specified bit of the following word devices (except input relay, output relay, internal relay, special relay and link relay)			-
Word device	Input relay (WX)*2	WX000	to	WX511	Decimal
	Output relay (WY)	WY000	to	WY511	
	Internal relay (WR)	WR000	to	WR886	
	Special relay (WR)*2	WR900	to	WR911	
	Link relay (WL)	WL000	to	WL639	
	Timer/Counter (Elapsed value) (EV)*4	EV0	to	EV3071	
	Timer/Counter (Set value) (SV)*4	SV0	to	SV3071	
	Data register (DT)	DT0	to	DT10239	
	Special data register (DT)	DT0	to	DT32764	
		DT90000	to	DT90511	
	Link register (LD)*5	LD0	to	LD8447	
	File register (FL)*5*6	FL0	to	FL32764	
	Bit device word	Converting bit devices into word (Except Timer contact and Counter contact)			-

*1　The above device range is for the case where FP10SH is used.
　　For FP0, FP1, FP2, FP3, FP5, FP-10(S), or FP-M, device ranges are different in individual CPUs.
*2　Writing to device is not allowed.
*3　Only those devices that have been assigned to I/O contacts by peripheral software can be used.
*4　The device points of the timer and counter differs depending on the head numbers of the counter set by the value of the system register (No. 5).
*5　This device does not exist in FP0, FP1, and FP-M.
*6　When FP2SH is used, one bank of "32765 × 3 banks" can be monitored.

REVISIONS

Print Date	* Manual Number	Revision
Sep., 2013	SH(NA)-081198ENG-A	Compatible with GT Works3 Version1.100E
Nov., 2013	SH(NA)-081198ENG-B	Compatible with GT Works3 Version1.104J • Changing the icons of the supported models
Jan., 2014	SH(NA)-081198ENG-C	Compatible with GT Works3 Version1.108N • The AZBIL (formerly Yamatake Corporation) temperature controller (AHC2001) is supported.
Apr., 2014	SH(NA)-081198ENG-D	Compatible with GT Works3 Version1.111R • GT25 and GS are added. • The enlargement of the communication setting range of the TOSHIBA PLC is supported.
Oct., 2014	SH(NA)-081198ENG-E	Compatible with GT Works3 Version1.122C • GT21 is added. • IP Filter setting is supported.
Jan., 2015	SH(NA)-081198ENG-F	Compatible with GT Works3 Version1.126G • GT21 corresponding to IAI robot controller connection.
Apr., 2015	SH(NA)-081198ENG-G	Compatible with GT Works3 Version1.130L • GT27 is added (GT2705-VTBD). • GT21 is added (GT2104-RTBD, GT2103-PMBDS2, GT2103-PMBLS).
Jun., 2015	SH(NA)-081198ENG-H	Compatible with GT Works3 Version1.134Q • TOSHIBA Unified Controller nv
Oct., 2015	SH(NA)-081198ENG-I	Compatible with GT Works3 Version1.144A • GT21 is added (GT2104-PMBD, GT2104-PMBDS). • GT21 corresponding to KEYENCE PLC (Ethernet connection).
Dec., 2015	SH(NA)-081198ENG-J	Compatible with GT Works3 Version1.150G • Station blocking function compatible Ethernet connection • Station monitoring function of the following connection 　CC-Link IE controller network connection 　CC-Link IE Field Network connection • GT21 corresponding to connection to OMRON temperature controller
May, 2016	SH(NA)-081198ENG-K	Compatible with GT Works3 Version1.155M • GT21 is added (GT2105-QTBDS, GT2105-QMBDS, GT2104-PMBDS2, GT2104-PMBLS). • Some corrections

MEMO

WARRANTY

Please check the following product warranty details before using this product.

■1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the sales representative or Mitsubishi Service Company.
However, if repairs are required onsite at domestic or overseas location, expenses to send an engineer will be solely at the customer's discretion.
Mitsubishi shall not be held responsible for any re-commissioning, maintenance, or testing on-site that involves replacement of the failed module.

(1) Gratis Warranty Term

The gratis warranty term of the product shall be for thirty-six (36) months after the date of purchase or delivery to a designated place.
Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be forty-two (42) months.
The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.

(2) Gratis Warranty Range

(a) The customer shall be responsible for the primary failure diagnosis unless otherwise specified.
If requested by the customer, Mitsubishi Electric Corporation or its representative firm may carry out the primary failure diagnosis at the customer's expense.
The primary failure diagnosis will, however, be free of charge should the cause of failure be attributable to Mitsubishi Electric Corporation.

(b) The range shall be limited to normal use within the usage state, usage methods, and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.

(c) Even within the gratis warranty term, repairs shall be charged in the following cases.
- Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
- Failure caused by unapproved modifications, etc., to the product by the user.
- When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
- Failure that could have been avoided if consumable parts designated in the instruction manual had been correctly serviced or replaced.
- Replacing consumable parts such as a battery, backlight, and fuse.
- Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
- Failure caused by reasons that could not be predicted by scientific technology standards at the time of shipment from Mitsubishi.
- Any other failure found not to be the responsibility of Mitsubishi or that admitted not to be so by the user.

■2. Onerous repair term after discontinuation of production

(1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued.
Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.

(2) Mitsubishi shall not accept a request for product supply (including spare parts) after production is discontinued.

■3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center.
Note that the repair conditions at each FA Center may differ.

■4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:

(1) Damages caused by any cause found not to be the responsibility of Mitsubishi.

(2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.

(3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.

(4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

■5. Changes in product specifications

The specifications given in the catalogs, manuals, or technical documents are subject to change without prior notice.

■6. Product application

(1) In using the Mitsubishi graphic operation terminal, the usage conditions shall be that the application will not lead to a major accident even if any problem or fault should occur in the graphic operation terminal device, and that backup and fail-safe functions are systematically provided outside of the device for any problem or fault.

(2) The Mitsubishi graphic operation terminal has been designed and manufactured for applications in general industries, etc.
Thus, applications in which the public could be affected such as in nuclear power plants and other power plants operated by respective power companies, and applications in which a special quality assurance system is required, such as for Railway companies or Public service shall be excluded from the graphic operation terminal applications.
In addition, applications in which human life or property could be greatly affected, such as in aircraft, medical, railway applications, incineration and fuel devices, manned transportation equipment, recreation and amusement devices, safety devices, shall also be excluded from the graphic operation terminal.
Even for the above applications, however, Mitsubishi Electric Corporation may consider the possibility of an application, provided that the customer notifies Mitsubishi Electric Corporation of the intention, the application is clearly defined and any special quality is not required, after the user consults the local Mitsubishi representative.
